Growth in world trade slowed by slack demand

Growth in world trade has slowed more than expected this year because of the west's sluggish demand for consumer goods, according to the World Trade Organisation's annual report. But trade is still expanding more rapidly than world output, which is forecast to continue growing by 3 per cent this year. Page 16

Court rules on Belgian politician: Belgium's supreme court said the main allegations of paedophilia against deputy prime minis-ter Elio di Rupo were unsubstantiated and there were no grounds for lifting his parliamentary immunity to enable a prosecution. Page 2

London and Dublin still split: A four-hour London summit meeting ended with the British and Irish governments as far apart as ever on terms for an Irish Republican Army ceasefire. Irish prime minister John Bruton issued a personal plea for an end to violence.

Burma accused members of opposition leader Aung San Suu Kyi's National League for Democracy, underground communist activists and student exiles of instigating recent student protests. Aung San Suu Kyi branded the accusation ridiculous. Yesterday, in the third rally in a week (above), some 100 students protested until dispersed by riot police.

Yeltsin takes country air: Russian president Boris Yeltsin moved to his Rus country residence west of Moscow for the "final stage" of his rehabilitation after a heart bypass operation.

EU in drive to curb water pollution

Environment Correspondent

The European Commission is expected to act early next year to make all water users pay the full "economic cost" of water in a drive to eliminate serious water pollution and end wastage.

EU environmental officials have completed a framework directive which could particularly hit farmers, who pay very little for their water in most EU states. Pollution cides and fertilisers. from sewage and industry is already largely covered by the full economic cost of because different kinds of next year.

source of groundwater pollu-

believe the framework directive can only be fully implemented together with reform of the Common Agricultural Policy, which encourages over-production.

One way of doing this involves charging farmers for the cost of water pollution through the use of pesti-The draft directive defines

existing EU directives, but water as including a charge agriculture remains a big for environmental costs as well as operational and management costs, capital costs, Commission officials and reserves for future

The draft aims to achieve "good ecological status" for all water in the European Union by 2010, with a few exceptions including irrevocably polluted harbours such as Rotterdam. It argues that water pollution needs to be tackled in a "holistic" fash- ted to submit a final proion because it crosses national boundaries, and

closely related. "If you pour fertiliser into the Thames, the Seine, or the Rhine, you are likely to

affect fisheries in the North Sea," explains one official. The Commission's environment directorate is sending the plan to EU governments for comment at the same time as other Commis-

sion departments. The Commission is expecposal for adoption by EU environment ministers early cial says it is unlikely to cost nearly as much as earlier expensive directives to clean up drinking water and improve sewerage systems. "The worst is over," said the

However, the proposal is certain to spark fierce debate in other respects, particularly in its proposal that member states phase out subsidies for water use and charge the full economic

The draft framework directive carries no price tag, but tal costs remains fraught with difficulty because fer member states have done it. The second leap of imagination the Commission will ask member states to make is not to expect Brussels to set specific targets for abat-

ing water pollution. Instead it would let individual EU governments decide what constitutes good ecological quality and then implement it, bearing in mind standards should be set according to the use for which the water is intended.

EUROPEAN NEWS DIGEST

Di Rupo wins part clearance

Belgium's deputy prime minister, Mr Elio Di Rupo, was yesterday partially cleared of paedophile allegations, but must wait for the supreme court to investigate new evidence against him.

A report from the court to the Belgian parliament said the original dossier against Mr Di Rupo alleging a homosexual relationship with a minor, had insufficient substance to be worth pursuing. But it added that the correct legal procedures had not been followed when a second dossier had been presented last week, and it had been unable to examine the new evidence.

When the court has examined this further evidence it will make another recommendation on whether parliament should lift the minister's constitutional immunity from prosecution and indict him, or to drop the case completely. Mr Di Rupo has consistently protested his innocence.

The supreme court will today deliver a report on similar allegations against a regional minister, Mr Jean-Pierre Grafe, to the parliament of Wallonia, Belgium's French-speaking southern region. Mr Grafe has also denied the charges.

Spain to keep subsidising coal

Spain's government will continue to subsidise the loss-making domestic coal industry over the next 10 years under the terms of a framework for the electricity sector to be signed with national generators this week. The framework, which introduces a timetable for deregulating the sector and aims to lower electricity costs by 8 per cent over the next three years, will nevertheless reduce the guaranteed share of domestic coal used in power generation to 15 per cent from as much as 40 per cent at

The liberalisation calendar, which will be implemented in 1998, establishes norms for a phased separation between electricity generators and suppliers and guarantees third party access to transmission and distribution grids operated by existing generators.

Electricity tariff reductions will start next year. Militant miners last month forced the government to rethink closing state-owned pits. Total subsidies to the domestic coal industry are estimated to be more than Pta200bn (\$1.5bn) a year.

Italy launches tobacco probe-

Italy's anti-trust authority is probing distribution contracts between the state tobacco monopoly and the US multinational Philip Morris to determine if they contravene laws on abuse of dominant position. The inquiry follows a complaint by an Italian company, ITA, which is seeking to market cigarettes under the Trussardi brand made by Austria Tabakwerke of Munich. Cigarettes can only be imported into Italy if formal

approval is granted by AAMS, the monopoly. This has not been provided, despite repeated requests, apparently on the grounds that use of the Trussardi fashion name might conflict with regulations on tobacco advertising.

An investigation into possible abuses of dominant postion by AAMS and Philip Morris was also launched by the European Commission earlier this year. Together, they control about 90 per cent of the Italian market. Forty per cent of cigarettes smoked in Italy are imported: Philip Morris accounts for 34.5 per cent. John Simkins, Milan

Slovenian poll inconclusive

Slovenian voters failed to give any of the proposed electoral models in a referendum on Sunday the necessary 50 per cent support to be adopted. Little more than a third of the 1.5m electorate bothered to take part . in the referendum which is expected to cost T400m (\$3m). most support at 44.4 per cent for a two-round majority system proposed by the centre-right Social Democrats. Such a system would probably have produced a clearer outcome than in the November 10 general election, when a rightwing alliance failed to win an absolute parliamentary majority by one seat. Mr Janez Drnovsek's centre-left Liberal Democrats remained the biggest party, but are struggling to find enough support to form a new Reuter, Ljubljana coalition government.

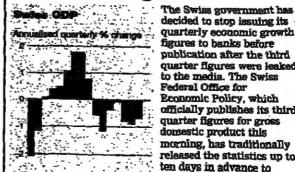

Brussels reunites Berlin

West and east Berlin are to be reunited in the eyes of the European Union which from 1997 onwards will treat both halves of the once divided city equally when assessing eligibility for subsidies, Mr Karel Van Miert, competition commissioner said yesterday.

The decision will benefit west Berlin which at present is treated differently from the eastern half of the city and the surrounding region of Brandenburg. East Berlin currently receives DM237m (\$152m) from the EU's structural fund. West Berlin receives DM100m.

Mr Van Miert also said he would recommend that the Commission grant further subsidies to two east German shipyards - the MTW yard in Wismar and the Volkswerft in Straisund – which had been part of the Bremer Vulkan shipbuilding group which collapsed earlier this year. Subsequent investigations found subsidies intended for the yards had been deployed elsewhere within the Bremer Frederick Stildemann, Berlin

Swiss GDP figures leaked

quarterly economic growth figures to banks before publication after the third quarter figures were leaked to the media. The Swiss Federal Office for Economic Policy, which officially publishes its third quarter figures for gross domestic product this morning, has traditionally released the statistics up to ten days in advance to various Swiss banks on condition that they observe the embargo. This was

supposed to ensure banks'

statistical publications were as up-to-date as possible. However, news that gross domestic product had fallen by 0.7 per cent in the third quarter ran on the Reuters news wire last Friday. Although the breaking of the embargo has had no impact on Swiss financial markets, it is potentially embarrassing since it highlights once again the cosy relationship between the government and the country's big banks, William Hall, Zurich

Brussels rejects steel aid

A European Commission official said yesterday that a draft decision concluded "unequivocally" that a BFrI.5bn (\$47m) capital injection for Belgian steelmaker Forges de Clabecq amounts to an inadmissible public subsidy. A definitive ruling is due in principle on December 18.

The European Coal and Steel Community, one of the European Union's founding bodies, bans subsidies to the steel industry in general. Restructuring and other forms of ald can still be allowed by EU industry ministers acting unanimously. Belgium has always contested that the Clabecq plan involved subsidies, arguing that the region of Wallonia was acting within its right as the main shareholder of Clabecq. Reuter, Brussels

Counting cost of paying in euros

clear at a recent seminar organised by the German chambers of Preparing industry and commerce (DIHT) in for Emu Bonn from the experiences of three large companies which are preparing for

the single European currency. The retail trade, in particular, faces huge extra costs if, as consumer groups want, goods have to be priced in both euros and national currencies for a full six months from January 1, 2002 while euro notes and coins are introduced.

Mr Hartmut Krämer, an executive with the clothing retailer Peek & Cloppenburg, warned of "immense problems" if European leaders did not introduce the euro overnight in a "big bang". Double pricing would cost his company about DM25m (\$16m). Cash registers would have to be adapted to produce two receipts. Paying for goods would be slower and require more staff. Bar code labels would have to be replaced by bigger ones with room for informstion in two prices, at a cost of

would be under pressure to round down prices of goods when converted into euros, reducing turnover

and narrowing profit margins. Mr Krämer cited Peek & Cloppenburg's cheapest men's shirt, which retails in Germany at DM39. At a conversion rate of DM2.15, this would cost £18.13. The retailer would be more likely to charge E17.90 or E18. "Good for the consumer but bad for the retail trade,"

As a company with outlets in Bel-gium and the Netherlands as well as Germany, Peek & Cloppenburg had to cope with the impact of differing value added tax rates in its pricing transnational retailers would find it hard to round up prices.

Gerling-Konzern, a large insurance company, has also come up against practical problems associated with the euro introduction. Mr Dieter

N Americans begin to

believe the bird will fly

ditions in the retail trade, companies the euro for the D-Mark would mean changes to its entire range of insurance products. For example, at DM2.15 per euro, the standard DM200 excess German customers paid in the event of a car insurance claim translated into E139.53.

If double pricing were agreed for an interim period after 2002, the company would have to replace its application forms to accommodate the information, Mr Weber said. He hoped the abbreviation chosen for the euro would be no more than two letters. Replacing "DM" by "EU" would be relatively simple, but "EUR" would cause problems in the

group's computer system.

Gerling's costs would depend on policy. The consumer, Mr Krämer whether the group decided to switch said, would expect the same euro prices in the three countries. Stages. The former would be cheaper Because of competitive pressures, at about DM30m but technically risky, Mr Weber said. A step-by-step procedure could cost DM75m, with software changes costing around DM36m. In return, Gerling expected gains of just DM4m-DM7m from the single currency.

Weber, of the group's information By contrast, the euro appeared to May to discuss contentious issues management unit, said substituting pose few problems for Mr Gunter such as double pricing.

Erhardt, an executive with the large chemical company BASF, and a member of the euro working group set up by the German chemical industry association. He believed the euro would bring big opportunities. The industry association had pro-duced a checklist to help members cope with transitional issues affecting purchasing, logistics, sales, balance sheets, taxation, data process-

ing, personnel and contracts. Mr Erhardt said there was no single blueprint for a company to tackle the switch from D-Mark to euro and many companies would use the occasion to make other changes.

The three companies began intensive preparations between the middle and end of last year. The executives complained that public authorities, such as tax offices, were failing to match the progress of private businesses and were showing far less enthusiasm for the project

than Europe's politicians.

Mr Erhardt also said there was often a lack of reliable information. Mr Jacques Lafitte, an aide of Mr Yves-Thibault de Silguy, monetary affairs commissioner, sald the European Commission favoured a shorter transition period than six months. He suggested a hearing with con-sumer and business organisations in

Emu: who's going to make it

The Emu calculator provides a weality anapapart of the probabilities which the financial madests place on selected countries being utiling and able to join. Gentiany in forming a single European correctly in 1999.

Currency strainglets at investment bank of P Morgan calculate the probabilities from the interest rate aways marted, in which investors away floating rate interest payments on an investment for Bard-rate ones.

The probability which the menture place on France can be calculated by locking at the current difference between French trans and D-Mark swap raise

options, will convert easily will have to deal with Emu into euros. If Britain joins Emu, it will lose its active options exchanges which sterling contracts. However, trade products which settle it retains a broad base of

Swedes probe trader

By Clay Harris in London and Davrell Roberts Tien

A Swedish prosecutor yesterday opened an official investigation into Fairbank, the currency trading company which has targeted ethnic Chinese private investors in that country.

The decision by Ms Anna Lena Dahlovist, a prosecn tor attached to the Serious Economic Crimes Squad. followed a meeting with Mr Bernt Magnusson, head of the securities department at Finansinspektion, Sweden's financial supervisory authority. Police in Sweden first had their attention drawn to Fairbank's activi-

Fairbank, which operates openly in Stockholm, Gothenburg and Malmö, does not have permission from the Riksbank, Sweden's central bank, to provide currency trading services. Its customers, conservatively estimated to number more than 300, are believed to have

lost millions of kronor. Fairbank is operated by Mr Dannis Cheung, a UK citizen who ran Pagoda, a similar currency trading scheme which is being investigated by Britain's Serious Fraud Office over the alleged misuse of \$7.5m of investors'

Mr Kenneth Yeung, director of Currency Exchange Services, which supplies foreign exchange prices to Fairbank from an office in Soho and keeps its records, yesterday refused to comm when asked whether his company had withdrawn an application for authorisation by the UK's Securities and Futures Authority.

Currency Exchange Services has been allowed to arrange "rolling spot" foreign exchange trades rolled-over forward contracts of seven days or less while the SFA processed its application. Withdrawal would be another blow to

lished in the Financial Times and Dagens Nyheter. the Swedish newspaper. more than 25 investors conto 80 others sent faxes to the company, all demanding to

close their accounts. Mr Cheung also met between 20 and 30 of Fairbank's traders in an attempt to assure them of the company's legality. Fairbank had begun to expand its business nity by recruiting ethnic

NEWS: EUROPE

Vote today on programme of welfare improvements and tough reforms

Romanian parties agree cabinet

By Virginia Marsh

After protracted negotiations, the victors in last month's Romanian general elections yesterday announced the formation of the country's first centreright government since the second world war.

Mr Victor Ciorbea, the 42year-old prime minister elect, is due to put the team drawn mainly from his Democratic Convention - as well as a governing programme that emphasises welfare improvements and tough reform to a parliamen-

tary vote today. The coalition, which also

per cent of the seats after defeating the former communists for the first time in the November 3 elections.

Mr Ciorbea, a lawyer and former trade union leader who as mayor of Bucharest won a reputation as a competent and honest administrator, said his cabinet would "execute a programme that is as ambitious as it is difficult". Mr Mircea Chimara, a 53-

vear-old economist and leading member of the Peasants' party, the mainstay of the includes the Social Demominister in the 24-member

trist group, and the ethnic try and trade ministry - one pany debt which had risen to Hungarians' party, has 59 of six portfolios given to the 17 per cent of gross domestic Liberals – will be led by Mr Calin Popescu-Tariceanu, a who heads a popular private

radio station. The USD's Mr Adrian Severin, the new foreign minister, is one of several technocrats from Romania's first post-communist government to be brought back into the cabinet. The ethnic Hungar-

Serb protests fail to draw workers

Tens of thousands of Serbian demonstrators showed no sign of abandoning their protest against the annulment of opposition victories, but independent trade unions yesterday failed to rally factory workers to their cause.

Workers at Industrila Motora i Traktora (IMT), a tractor factory on the outskirts of Belgrade, voted down a union proposal to march to the city centre and join three weeks of protests against President Slobodan Milosevic of Serbia, who cancelled opposition wins in local elections last month. Yesterday's vote in the fac tory courtyard underscores the difficulties opposition

workers' support to widen their protest. Fearing retaliation, workers said they joined the opposition protests in their own time, but were more concerned with eking out an existence on their sporadic wage than with joining the

leaders face in winning

political protests. "It's cold, why should we walk all the way to Belgrade," said Mr Skender

- TW THE R

By Jenny Luesby

The International Medical Commission on Bhopal yesterday launched a bitter attack on the Indian government and Union Carbide, the US chemicals company, for neglecting victims of the world's worst industrial accident at Bhopal.

In its report on the medical condition of the victims. published yesterday 12 years after the accident, the commission claimed that survivors' ailments were "unrecognised, untreated and mistreated"

"At every point Union Carbide has been as obstructive as possible," said Dr Rosalie Bertell, one of the commissioners. This had created an immoral international situ-

The research is the first independent assessment of the impact of the 1984 accident on hundreds of thousands of survivors.

Between 4,000 and 5,000 people were killed by the release of 40 tonnes of polsonous pesticide from a plant owned jointly by Union Carbide and the Indian government. The commission, made up of 15 medical specialists from 12 countries, is the only team of international experts to have been allowed into Bhopai.

The commission found that the compensation procedure set up by the Indian government had been derailed by corruption. It also reported that local doctors had been obstructed in for Indian Trades Unions. their efforts to recognise victims and deliver appropriate healthcare by the government's refusal to release relevant medical data. The commission said that around 200,000 survivors had suffered permanent damage to their health and partial or

permanent disability. However, the out-of-court settlement between the Indian government and Union Carbide, made in 1989, had been made without reference to the number of victims from the accident.

NZ set to have new government today

By Terry Hall in Wellington

Mr Jim Bolger, New Zealand's caretaker prime minister, said last night that the country should finally get a government today, two months after a general election in which no single party emerged with a majority.

The make-up of the government is expected to be decided at an all-day meeting today of MPs from New Zealand First (NZF), the small populist party which holds the halance of power.

NZF, led by Mr Winston Peters, a former National cabinet minister, will debate whether it should join forces in this year's budget to prowith the National party or a Labour-Alliance party coali-

> NZF won 13 per cent of the vote in the general elections on October 12. Since then both the main

parties. National and Labour, have been courting Mr Peters, hoping to secure his party's support to form the new government. Pres-sure is building on Mr Peters and his team to announce its decision ahead of the opening of parliament on Thurs-

In the election campaign he reserved his greatest criticism for Mr Bolger, claiming he was "not fit to govern" Over the past two months, however, the pair have had more cordial meetings. Mr Peters said the time had come to "put the differences of the past behind us".

ASIA-PACIFIC NEWS DIGEST

Japan bank lowers rate

The Industrial Bank of Japan will lower its long-term prime lending rate by 0.2 percentage points to a record low of 2.5 per cent from tomorrow, it said yesterday. The cut in the prime rate - the interest rate that the IBJ offers to the most creditworthy corporate clients - was seen as further indication of continued easing of monetary policy in Japan in the foreseeable future.

The declining trend in long-term rates on the Tokyo money market was reinforced by the release in November of the Bank of Japan's quarterly "lankan" survey of usiness sentiment, which showed a weak recovery in business confidence.

Japan's two other long-term credit banks - the Long-Term Credit Bank of Japan and Nippou Credit Bank are expected to follow suit.

Long-term credit banks customarily set their long-term prime rates at 0.9 percentage points above the coupon on IBJ's most recent five-year debenture issue. The rate is reviewed when the debenture's coupon and its market yield differ by more than 0.2 points. The IBJ's December five-year debentures for

institutional investors will carry a coupon of 1.6 per cent - down from the November issue, which carries a coupon
of 18 per cent.

Colour TV price war in China

A colour television price war in China is spurring sales, cutting the share of foreign brands and rationalising an industry which has capacity nearly three times that of demand, company officials and newspapers reported

Price-cutting began in March when the market leader Sichuan Chang Hong Electric, lowered prices by 8 to 18 per cent. Other big domestic producers followed suit. The result was a rise in market share for the main Chinese producers and a drop in the share held by foreign brands and by small and medium-size Chinese makers, the Shanghai Securities News said.

Because of the price cut, Chung Hong's market share rose to 26 per cent in October from 16 per cent in March, with sales rising by 1.3m sets. It overtook Matsushita Electric Industry as top seller.

Chang Hong expects total 1996 sales of 4.5m sets, up from 2.6m in 1995 out of total national output of 58m sets, up 15.9 per cent over 1994.

N Koreans defect to Seoul

A group of 17 North Koreans arrived in Seoul yesterday. in what is believed to be the largest single batch of defections to South Korea. Officials fear the defections will be the start of an exodus of North Koreans because of food shortages in the North.

The North Koreans - 16 members of one family and a state policeman who guided them – were helped in their scape by a wealthy relative in the US, who provided funds to bribe border guards. The family travelled through China for six weeks before reaching Hong Kong and then flew to Seoul.

The number of North Koreans defecting to South Korea is still small, totalling just 140 since 1991, while another 1,000-2,000 North Koreans are believed to have escaped to Russia or China. The South Korean government yesterday submitted legislation that would establish settlement camps where defectors can stay for up to a year for questioning and vocational training. Ramos firmly on reform path

Edward Luce on new zeal after flagship tax bill passes congress

Philippines: looking good

t any other time, the Philippine central bank's decision to loosen monetary policy would have been interpreted as a routine measure. But government economists say that the cut last month in the minimum reserve requirement on domestic banks amounted to more than just mundane tinkering with banking regulations.

The decision, which is expected to be followed by further opening of the domestic banking sector to foreign competition next year, has been presented as the start of a new burst of reformist seal for the last 18 months of the presidency of Mr Fidel Ramos.

With the summit of the Asia Pacific Economic Co-operation (Apec) forum out of the way, government strategists are now focusing on the next batch of reforms which had been put on hold because of wrangling over a flagship tax reform bill. Helped by the fact that the most controversial - and seemingly intractable - portion of the bill was pushed through on the eve of the Apec summit, the government has been given "a new lease of life" according to

last, generation of Ramos privatisation of the national power corporation, a push to contract out government serincluding health, education and state pension funds and liberalisation of the protected retail sector.

With the new tax law pro-

one official. The next, and possibly reforms include the US\$5bn and police force. vices to the private sector -

income tax, further measures aimed at simplifying the tax treatment of corporate debt and to boost the development of a more sophisticated local capital market are before congress. Mr Ramos is also keen to accelerate reform of the widely disrespected judiciary

· Mr Roman Azanza, chairman of the capital markets development council, a government body, said getting the tax bill through congress showed that the government "is prepared to really push congress when it needs to". "In comparison, the next

viding for simplification of

385.9%

70.5%

35.7%

pieces of legislation should personal and corporate be less controversial," he

The tax law is regarded as the single most important economic reform undertaken by the Ramos government, Its success "shows that the government can summon the political will to face off powerful vested interests. said Mr Jojo Gonzalez, an analyst at Jardine Fleming in Manila. "It would have been difficult to imagine this

outcome a few years ago." It also fulfils the country's last major pledge to the International Monetary Fund under a three-year programme that expires in

"Revenues from the new tax system will remove a serious obstacle to sustainable high growth in the Philippine economy," said Mr Neil Saker, regional economist at Crosby Securities in Singapore. "There are other problems such as the widening trade deficit but regular government surpluses should help keep a lid on the current account deficit."

The government still faces

opposition in the next few weeks as it deregulates the oil industry and raises petrol prices. Petrol pump increases were postponed last month to prevent street demonstrations coinciding with the Apec summit. And Mr Ramos's opponents say the divisive issue of abolishing the presidential term limit, which would allow him to stand for a second six-year term when this one expires in May 1998, will be pushed into the political limelight. Mr Ramos managed to keep the issue on the "backburner" while attention was focused on enacting the tax bill.

A successful Apec summit may have been Mr Ramos's last piece of good news for the next few months.

The UK decision was brothe UN has failed to sort out ken to Unido staff at its Vienna headquarters yesterday. Baroness Chalker, the economic development.
The US decided to quit UK overseas development minister, had earlier written Unido a year ago and will do so at the end of this month. to Mr Mauricio de Maria y Campos, Unido's directorgeneral, saying the UK was no longer convinced it was European Union solidarity in needed as a specialised institution. Lady Chalker was not available for comment. A shocked Mr Maria y

Campos said there was "a major contradiction" in Lady Chalker's arguments. She had welcomed cost-cutting, anti-bureaucratic reforms he had spearheaded since taking charge of the organisation in 1993 but was now making Unido the ent, that it too should quit scapegoat for the UN's general lack of progress on reform.

"Hitting out at the one UN organisation that did most in terms of reform is a powerful disincentive to reform. We did our job and took the lead in the UN system. Broader

consider merging with the UN reform is not within the New York-based UN Devel- realm of Unido," he said.

Unido earned its reputation as a bloated, top-heavy, overpaid bureaucracy under its previous director general, Mr Domingo Siazon, now Philippine foreign minister. It also fell out of favour with the US because of its close work with the command economies of developing countries influenced by the former Soviet bloc.

Its role changed dramatically after the cold war and Mr Maria y Campos has removed a layer of senior management and halved staff to about 750. One of its new roles is as agency for implementing the Montreal Protocol on pollution in the transitional economies of central and eastern Europe.

However, it has also become the most obvious target through which the paymasters comprised mainly of western Europe, North America, Japan and Australasia could prove UN agencies could be dismantled as well

NEWS: INTERNATIONAL

OECD member states allocate an average 5.8% of GDP for schooling

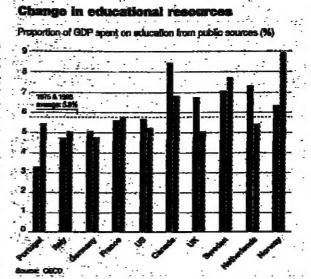

Spending on education stagnates

By Simon Targett, Education Correspondent

Education spending as a proportion of national income has stagnated over the past 20 years, according to figures released vesterday by the Organisation for Economic Co-operation and Development. Yet, for all this, student participation in post-compulsory education has actually risen because of a significant falling birth rate in the 28 OECD member

countries. Countries spend between 3.5 per cent (Greece) and 9 per cent (Norway) of gross domestic product on education. The average spend is 5.8 per cent, and both the UK and US allocate less than this, having seen their edu-cation expenditure decline marginally since 1975. Japan spends just 3.6 per cent of GDP on education.

While some countries invest in a mass system, others invest heavily in individual students. At tertiary level, Switzerland spends an annual \$15,700 per student, or \$64,500 over the whole study period. By comparison, Mexico spends \$4,300 annu ally per student, or \$11,300 for a complete course.

A significant outlay is average \$49,600, but the teachers' pay, and again there is great variation.

Primary school teachers in Turkey can expect a starting salary of just over \$8,000. compared with those in Switrland where the remuneration totals more than \$30,000. Some countries prefer to put more money into cutting class sizes rather than giving big bonuses to individual chers. In the US, primary

pupil-teacher ratio is nearly 18:1. In Denmark, teachers earn just \$25,600, but the pupil-teacher ratio is a healthier 11:1.

There is also a variation in dren spend with their teachers in class. Across the OECD spectrum, the average is 908 hours a year for 12 and 935 for 14 year-olds. For this age group, slightly more (28 per cent) is allocated for developing language skills than for mathematical and scientific skills (24 per cent). But the range of instruction hours ranges from less than 700 hours (Turkey) to nearly 1,100 hours (Austria).

If there are significant regional differences in spending policy, the global level of resources earmarked for education has not changed substantially since the 1970s. Yet participation in education after the age of 15 or 16 has boomed, particularly in some southern European countries, and the concludes that so-called "upper secondary"

education - broadly 16-18 year-olds - has become "the While participation in post-16 school education has levelled off around the 86 per tugal it has doubled. However, such marked improve ments mask still low levels of national participation, with fewer than 25 per cent of Turkish 25-84 year-olds

having completed this level

of education. In Italy, one of the richest countries in Europe, less than half the population

The OECD figures show that a growing minority is completing tertiary education, with the average jump ing from 19 per cent for 45-54 vear-olds to 23 per cent for 25-34 year-olds. Some of the "catching up" has taken place in Europe, notably in

Surprise Iraqi visit to Jordan

moving closer to improve economic and political ties following a surprise visit by the Iraqi foreign and trade ministers to Amman at the weekend. Meetings between Mr Mohammed Saeed al-Sahhaf, Iraq's foreign minister, who held talks with Jordan's King Hussein, and Mr Mohammed Mehdi Saleh the trade minister, who met Mr Abdul-Karim al-Kabariti, the Jordanian ahead of official clearance for the United Nations

food-for-oil deal. Mr Boutros Boutros Ghali, UN secretary-general, certified yesterday that all the conditions set by the Security Council had been fulfilled to allow Iraq to resume limited oil exports.

The meetings went shead despite cool relations between Jordan and Iraq, following Amman's offer of refuge last: ear to opposition members.

The weekend visits had an immediate effect on Jordanian stocks. The Amman financial market's 60-share index moved up 0.91 per cent to 155.11, its highest level since February. Bankers said trading was especially strong for vegetable oils, pharmaceuticals and chemicals stocks, which Jordan exported to Iraq before the 1990-91 Gulf war and which are permitted to be exported to Iraq under the oil-for-food deal. Judy Dempsey, Jerusale See Commodities, Page 28

Israel seeks further cuts

The Israeli cabinet yesterday agreed additional budget cuts of Shk1.2bn (\$367m), signalling the government's determination to reduce the budget deficit and reassure foreign investors and the markets that it is committed to structural reforms.

The combined Shk6.1bn cut will be presented to the Knesset later this mouth, where it will face tough opposition. But Mr Benjamin Netanyahu, prime minister, and Mr Dan Meridor, finance minister, are confident it will be passed. Mr Netanyahu said if "we don't cut, let there be no doubt that we will pay with a deterioration in our standing in the financial markets and in our credit

Approval of the budget cuts could pave the way for lower interest rates, which the business community has been clamouring for as high interest rates and an

overvalued shekel has hit profitability.

The cuts are aimed at bringing the budget deficit down from 4-4.5 per cent of gross domestic product this year to 2.8 per cent next year, a target which may prove elusive given lower than expected revenues this year and sluggish economic growth. But even if there is a revenue shortfall, Mr Netanyahu insists he will not resort to raising taxes to reach the target.

Gulf states take tough line

Leaders of six Gulf states yesterday condemned the policies of Iraq, Iran and Israel, as well as the "interference" by some of Iraq's neighbours in northern iraq, an apparent reference to Turkey, in a strongly worded communique at the end of their annual summit in Doha, Qatar.

The Gulf Co-operation Council states - Bahrain, Kuwait, Oman, Qatar, Saudi Arabia and the United Arab Emirates - own nearly half of proven global oil reserves. The GCC condemned Iraq for failing to meet all UN resolutions relating to the 1990-91 Gulf war, particularly its refusal to disclose details of its weapons of mass

The communiqué also-criticised a weapons build-up by Iran, and its deployment of surface-to-surface missiles, which exceeded its "conventional" defensive needs. Gulf leaders condemned Israel, which was called on to sign the nuclear non-proliferation treaty and allow

inspection of nuclear installations. For the fifth consecutive year, the GCC also called on Iran to end its occupation of three Gulf islands claimed by Robin Allen, Dubai

Mary Leakey dies at 83

Mrs Mary Leakey, the famous fossil hunter who in 1978 discovered footprints that are the oldest evidence of the origins of man, died in Nairobi early yesterday, aged 83. Mrs Leakey and her husband, anthropologist Louis Leakey, who died in 1972, together discovered the fossils of the 1.75m-year-old Homo habilis in a dig at Tanzania's

Olduvai Gorge in 1964. Her 1978 discovery of footprints in volcanic ash at Lactoli in Tanzania revealed that the human ancestor Australopithecus afurenses walked fully upright much earlier than was previously thought. The footprints are believed to be 3.6m years old.

Ministers urged to do more for poor

Developing nations deserve duty-free entry to rich markets, says UK charity

By Frances Williams

Christian Aid, the UK-based charity, yesterday orged WTO ministers to do more to help the world's poorest

countries benefit from trade. In a report released for the first day of the WTO meeting in Singapore, Christian Aid said the least developed countries (LDCs) had failed to gain from freer trade. Instead, they had become increasingly marginalised in the global econ-

"Christian Aid believes

there must be action to support poor countries if they are to become independent members of the global eco-nomic family," said Mr Peter Madden, co-author of the report.

Christian Aid expressed particular disappointment that richer nations had watered down the plan of action for LDCs proposed earlier this year by Mr Renato Ruggiero, WTO directorgeneral. Ministers are due to endorse the plan in Singapore but only as a guide to action and not as a binding

commitment by at least adopting [Mr Ruggiero's] proposal for duty-free access to rich-country markets for the least developed countries," Mr Madden said.

Christian Aid also called for increased technology transfer, aid and debt relief, and protection of LDCs from the negative consequences of the Uruguay Round trade accords, especially the agricultural agreement which is expected to raise world food prices over the long run by cutting subsidised exports. At their last meeting in

"The WTO could show Marrakesh in 1994 ministers pledged help for poor foodimporters to meet higher food bills resulting from the Round, but LDCs complain that little has been done.

The 48 countries defined by the United Nations as least developed, most of them in Africa, had seen their share of world trade fall by more than half over the past 20 years, the report noted. Their 570m people represent 12 per cent of the world's population but only 0.4 per cent of international trade, less than half the

EU doubts on Health **BA-American** alliance plan ever, said that other issues had not been addressed.

By Nancy Dunne in Washington and agencies

The European Commission still has "serious doubts" about whether to clear the alliance between American Airlines and British Airways and indicated that recent suggestions to sell slots would not compensate for London. the alliance's possible threat to competition.

"Selling slots is not some thing we can accept, an EU source in reference to a British government statement that it would clear the alliance if the two companies met certain conditions, including giving up 168 landing slots at London Heathrow airport. British Airways responded that it would divest of slots only "on the basis of fair market value".

The EU sources said that the companies should cede more than 168 slots and that they should give them away rather than sell them.

EU sources also noted that on certain British-US destinations the companies would control a large proportion of the passenger traffic.
The US is taking a hard-

line stance on the issue and is linking the proposed alli-ance with a bilateral "open skies" deal. Washington also insists that it would not be interested in the BA-American Airlines deal without "open skies".

American Airlines has yet to ask the US transportation department to rule on the alliance. "We could apply right now but because there is no underlying bilateral law, the likeliest outcome would be dismissal," said Mr Rob Britton, spokesman for American Airlines, "It's kind of a chicken and egg situa-

officials cool on drugs proposal ; 10 burn

三 162 日期

By Daniel Green in Frankfurt

Health officials from several European Union countries yesterday gave a cool reception to proposals by the pharmaceuticals industry to curb sale of cheap drugs from southern Europe to northern Europe, where drug prices are higher.

However, Mr Martin Bangemann, the industry commissioner, said he would press ahead with proposals to dilute the power of governments to set drug

Mr Bangemann was hosting talks in Frankfurt between health ministries and the drugs industry about completing the single European market in medi-

The talks were given greater urgency by a European Court of Justice ruling last week allowing import-ers to take advantage of different drug prices across Europe, even though drugs companies had argued they could not raise prices to prevent the trade.

Mr Jan Leschiy, chief executive of UK drugs company SmithKline Beecham. was one of the many industry executives to argue that such parallel trade forced prices lower across the Union, effectively imposing the pricing policies of one country on to others.

He warned that this would want to maintain the "double disapproval" rule in encouraged companies like his to invest more in the US. order to curb predatory pricwhere prices were set by Mr Britton said he was market forces, at the expense of Europe. Industry "cotimistic" about the talks executives prged measures and hopeful that negotiators such as a block exemption would meet again just after the start of the new from the single market for drugs, or a single price There is a lot of will in across Europe plus the abil-Washington to get this deal done," he said. "Nobody at ity to offer discounts to governments but not importers.

But Mr Kimmo Leppo of State or the Department of the Finnish health ministry Transportation would have the appetite for calling this said that it would take a long time before health policies that affected drug prices converged enough to affect parallel trade.

And Mr Vittorio Silano. director general of 'Italy'sministry of health, argued that prices of some drugs, especially new launches that had a monopoly, were already too high.

Another health official said: "Why should we do anything at all about parallel trade?" He argues that drug prices were converging anyway so the problem would disappear within a few years.

Mr Bangemann disagrees. He said there was a contradiction between a singlemarket among countries and a system where prices were controlled by individnal governments.

Within three months, there would be a working paper and within six months proposals to introduce an element of free market competition to drug pricing, said Mr Bangemann. The contents of the working paper and proposals would be worked out through further consultations.

Health ministries should be aware that low drug. prices did not necessarily member Convention on mean a cheap health care system because higher prescribing levels often resulted.

Chevron Asiatic Limited, Texaco Oil Development Company, Ampolex (A.O.E.) Ltd, and Shell Development (Australia) Proprietary Ltd, through their joint venture operator West Australian Petroleum Pty Limited (A.C.N. 009 085 367), seek expressions of interest for the purchase of the following oil and natural gas related assets located onshore in Western Australia.

 Production Licences L1 and L2, which include the Dongara gas field and several oil and gas exploration and development opportunities. The licences also contain the Mondarra gas reservoir which is well located and has the demonstrated capability 2. The West Australian Natural Gas (WANG) transmission system which includes a 350mm (14 inch) diameter pipeline and associated compressor stations, lateral pipelines and meter stations. The system runs 412 km from Dongara through the Perth metropolitan area and nearby industrial corridors to Pinjarra and provides services to various industrial gas users. For much of

its length, the WANG pipeline runs parallel to the Dampier to Bunbury Natural Gas Pipeline (DBNGP), the major natural gas transmission line serving Western Australia. The WANG pipeline connects to the DBNGP at Mondams. The acquisition of these assets would provide a unique opportunity for an immediate strategic role in the Western Australian domestic natural gas market for which very significant growth is expected over the next decade,

AMERICAN NEWS DIGEST

Israel lobby group setback

Opponents of the American-Israel Public Affairs Committee (AIPAC) yesterday hailed a court ruling that could make the pro-Israeli lobby group subject to federal election campaign regulations. The opinion by the US Court of Appeals in Washington reversed a finding by the federal election commission that AIPAC was not a political organisation.

If the commission acts on the ruling, AIPAC will have to make regular reports on its contributions to the election commission and limit them to no more than \$1,000 per candidate. In an 8-2 decision yesterday the court said the lobby group qualified under federal law because it gave contributions of more than \$1,000.

"This decision is the beginning of the end of the stranglehold that the Israeli lobby has had on US Middle Sast policy," Mr Richard Curtiss, a former US Information Agency official said. He was one of six individuals whose lawsuit against the election commission led to the ruling The FEC could appeal against the decision to the US

Uruguay referendum close

The result of a referendum on vital constitutional reforms in Uruguay is so close that absentee ballots may decide the issue, election officials said yesterday.

The ruling coalition formed by the Blanco and Colorado parties together with the Social Democratic Nuevo espacio, supported the measure. The left-wing coalition Frente Amplio led the opposition.

The reform package would change Uruguay's presidential selection process by limiting parties to a single presidential candidate chosen in primary elections. Presidential elections would have two rounds, the second between the top two vote getters. It would also strengther presidential powers and modernise Uruguay's election

Bank for native Canadians

Mr Jean Chrétien, Canada's prime minister, joined native leaders yesterday for a ceremony in Toronto's financial district at which the charter of the First Nations Bank of Canada was signed. Indian chiefs engaged in the project hope the bank will provide seed money to entrepreneurs enhancing the strength and diversity of Indian-owned

Though Canada's Indians and Inuits own an estimated 20,000 businesses, most are small. The new bank is a partnership between Toronto Dominion, Canada's fifth biggest bank, and the federation of Saskatchewan Indian chiefs. Toronto Dominion is investing C\$8m (US\$5.9m) and the federation C\$2m, but 75 per cent of the profits will go to the Indians.

Poverty surge in Venezuela

The percentage of Venezuelans living below the poverty line surged from 34 per cent to 74 per cent this year, as the second IMF-approved adjustment plan in seven years got under way. A report by the National Economic Council found that a typical family market basket cost \$257 a month, while the minimum wage stood at the equivalent of \$112 a month. Venezuela was rocked by a wave of rioting and looting in February 1989 that left dozens dead and hundreds injured, followed by two failed military coups that year.

Talks fail to close London-Dublin gap

By John Kampfner, Chief Political Correspondent

The British and Irish governments emerged from a four-hour summit in London yesterday as divided as before on the terms for an Irish Republican Army ceasefire, leaving Mr John Bruton, the Irish prime minister, to issue a personal plea for an end to violence.

Although both leaders said they agreed on the basic rules that would allow Sinn Féin, the IRA's political wing, to participate in multi-party talks, they remained far apart on the main point of contention - the time lag needed between a ceasefire declaration and entry to talks.

Mr Bruton said Sinn Féin leaders,

"people of ability", had nothing to fear from joining the political pro-cess. Their "strength of conviction" British party in Northern Ireland, would ensure their voices would be. Whose nine MPs may determine the heard, in a way that recourse to terrorism had not.

"For the sake of the people of Ireland and of all on these islands I call on them to give us an IRA ceasefire so that all can negotiate their future together free of threat," Mr Bruton said. In the past, the prime ministers

would have papered over differences on detail. But Mr Major appeared to go out of his way to emphasise the disagreement on the timing ques-

Labour threat on water profits

The opposition Labour party yesterday confirmed it may force privatised water companies to share future "excess profits" with consumers, in additional to its plans to impose a windfall tax on past profits. Mr Frank Dobson, environment spokesman, said Labour was considering a new pricing rule under which consumers would get a rebate if water companies made profits above what was considered normal.

"Labour is not prepared to see soaring profits being made on the back of falling investment and inflated bills for customers," he said. The new pricing rule was proposed earlier this year by Mrs Margaret Beckett, trade spokesman, in relation to other utilities, including British Telecommunications, British Gas and the electricity com-

Meanwhile, the water services regulator Ofwat yesterday attacked the government for not bringing forward early legislation requiring companies to pay compensation to customers forced to use standpipes in a drought. Reflecting concern that the legislation will not get through parliament before a general election, Mr lan Byatt, the director-general of Ofwat, welcomed moves by individual companies to promise such compensation in advance of a new law.

■ TELECOMMUNICATIONS

Increased flexibility for BT

Mr Don Cruickshank, director general of the Office of their families and enjoy Christmas. Many banks plan to close at lunchtime and Telecommunications, is proposing to give British Tele-communications greater flexibility to set its own wholesale prices, removing about 60 per cent of its interconnec there's no evidence of any tion revenues from regulatory control. Oftel's proposals were published yesterday as part of an extended consults. tion process which will lead to the introduction of new charging arrangements from August 1997.

interconnection charges are those which operators pay BT - the only UK operator with a comprehensive national network - to collect or deliver their calls. The payments can amount to a significant proportion of an operator's revenues. BT said yesterday the Oftel document contained no surprises but it was studying the details before commenting in depth. Mr Chris Weston, strategy director for Mercury Communications, BT's principal UK rival, welcomed the document as "an important step on the road to driving down interconnection costs". Alan Cane

SCOTLAND

U-turn over development funding

Scottish Enterprise, the development body for Scotland is to have most of a £37m (\$60m) cut in this year's budget reinstated next financial year by Mr Michael Forsyth, the Scottish secretary. The reduction in the budget of the body, which funds the local enterprise network and Locate in Scotland, the inward investment agency, attracted strong criticism when Mr Forsyth made it last

Announcing the Scottish Office's spending plans for 1997-98 yesterday, he said Scottish Enterprise's budget would be £464m, up £20m or 4 per cent on the current year. It would also receive an extra £10m to accommodate large inward investment projects from Taiwan and South Korea. Highlands and Islands Enterprise, which operates in the north of Scotland, will have its budget increased by 2 per cent in real terms. Last year it was cut. Manufactured exports from Scotland increased faster

than those of the UK as a whole in 1995. They reached £17.32bn (\$28.87bn), a rise of 20.3 per-cent compared with the UK's rise of 15.5 per cent. At constant prices Scottish exports grew by 12.9 per cent compared with the UK's 8.3

ROYAL FAMILY

Bill to tackle 'sexist' succession

Lord Archer of Weston-super-Mare – the author Mr Jeifrey Archer - takes the first steps today to introduce his bill to remove sex discrimination from the royal line of succession. His measure would ensure that if Prince Wiliam's first child was a daughter, she would become queen even if she had a younger brother. But it is sure to face resistance in the House of Lords, where many hereditary peers only hold their own seats because they are male. Lord Archer, a former MP in the ruling Conservative party, argued that the strength of his bill was that nothing would happen in practice for 50 or 60 years, until one of Prince William's children succeeded him.

TELEVISION

Channel 4 in deal with Warner

The Channel 4 television station has struck its biggest ever programme acquisition deal with Warner Brothers, a deal which means it will retain the rights to hit shows such as ER and Friends until 2001. Industry speculation last night said the total package, which includes features films and other comedy shows, could cost Channel 4 as much as \$100m although the channel declined to confirm a figure. Channel 4 insisted that the package would be paid for out of the channel's acquisition budget and money would not be diverted from British-made program-

TRAINING

University for industry' unveiled

A model for a Labour government's much-promised "university for industry" catering for small business those returning to work and the young unemployed will be unveiled today by the Institute for Public Policy Research, a leftwing think-tank with close links to the opposition party.

According to the institute's blueprint, the institution would be "more than a web of wires". As a "national learning network", it would not only promote the exploi-tation of the latest information technologies, but also serve as "a marketmaker" bringing learners into contact with providers, learning materials, courses and support services. . Simon Torgett

HEALTH

Opposition plan 'backed by study' A study which shows that relatively few family doctors

have proved genuine innovators since the government's reforms to the state health service in 1991 provides support for the opposition Labour party's plans, a leading academic said yesterday. The study was funded by the Economic and Social Research Council. Cost-saving among the 900 doctors interviewed has been widespread. But among "fundholders", doctors with their own budgets with which they buy hospital care, only 38 per cent could be classed as entrepreneurs - those who had introduced a wide range of new patient services. Professor Peter Taylor-Goodby, director of the ESRC's

beliefs and behaviour programme, said: "What Labour is proposing is to put [doctors] into much larger groups . . . That could produce a situation where those who are seriously interested in using the opportunities open to them do so, and then pass on the gains they have made to other

 Although more than half the population feel they should contribute to the cost of care in their old age, just 6 per cent say they are prepared to take out long-term care insurance, a study has found. Nicholas Timmins

Novel contours would add value to drinks cans but there are production challenges, says John Nutting

The shape of tins to come

unsung hero of the packaging world. In the 30 years since it was launched more than 2,000bn have been made worldwide, and the latest manufacturing techniques can produce more than 2,000 a

For the customer, it means that fresh, cold drinks retain their fizz almost indefinitely in a pack whose design is as demanding as an aircraft's wing. But developments are under way which could change the appearance of the familiar canisters with their convenient pull tabs.

The technique of converting aluminium or tinplate sheet (steel coated with an ultra-thin layer of tin) into cans is very sophisticated. In the US - the world's biggest market, making 100bn a year - the side-wall is just four thousandths of an inch thick, yet the can must support a load of more than 200lb during filling and putting the top on

Tinplate cans - which form half of all those used for beer and soft drinks in Europe - have 30 per cent thinner walls yet are even stronger.

The drive for cost reductions from the leading drinks companies - Coca-Cola used almost 30 per cent of the 190bn cans made last year - has cut the weight of the average aluminium can by more than two-thirds from 18g to less than 11g.

It may not sound much, but it means the US industry, for instance, has saved more than 6m tons of aluminium in the past three decades.

For the consumer, the most significant recent change has been the switch to narrower ends, which were also expected to bring big cost savings.

Until recently low cost has been the can's Achilles heal. Battle lines have been drawn between canmakers and the main drinks companies as demands for lower prices squeezed margins. With price as the sole criterion for bargaining - it ranges

A virtual reality system that gives packaging designers and fillers a chance to see what their products will look like on the supermarket shelf - without having to produce expensive physical models – has been launched by UK-based VR Solutions, Andrew Baxter

The system was designed for British Steel Timplate, which was looking for a way to "build" three prototype steel cans in a virtual environment. The designs can then be viewed and changed by customers on any Intel-based PC or workstation. Previous systems would have required

nigh-end workstations. Products can be displayed in a virtual warehouse or supermarket, helping the packaging chain deal with issues such as labelling, stackability, shelf impact and feasibility of a particular design without the packaging ever having physically existed.

between \$60 and \$120 per 1,000 cans depending on where they are made - the can had become a commodity in the US.

But in March this year Coca-Cola surprised canmakers when George Gourlay, one of its top executives, announced that it wanted to "bury the idea that it was a low-cost producer" and explore the use of shaped cans as a means of "adding value" to its

The move followed the roaring success in 1994 of Coke's 200z PET plastic bottles shaped like the distinctive contour glass bottles, first launched in 1916 and registered as a US trademark in

A prototype shaped steel can developed by Coke was test marketed in Germany and south-east Asia in 1994 and 1995. It was based on technology that has been used for making reformed or shaped food and beer cans for more than a decade. Gourlay, manager of Coke's

technical operations division. told packaging industry executives at a conference: "We believe that a contour aluminium can is feasible from a technical perspective. We believe we could be in the marketplace with a contoured can by the year's

The Coke executive explained that new types of containers were a means of adding value to the product and differentiating the company from the opposition. "We forgot the idea of packag-

ing as a marketing tool and as a result we created sameness and we became boring," he said. Since then there has been a mixed response. Already stung

by Coke's demands for cost cutting in previous years, the can-making industry was not keen to invest up to \$1m in new equipment for an untried idea, despite assurances that Coke would market the product effectively for incressed sales. There is nothing much new in

the technology of making shaped cans. A variety of techniques, including high-pressure air. hydraulics, explosives and mechanical systems have been used to make shaped food cans in a number of markets. The difference with drinks cans is that they are much lighter and therefore more delicate, and the production processes are much fas-

Companies such as Crown Cork & Seal of the US, the biggest canmaking company in the world, France's Pechiney, the biggest maker of drinks cans worldwide, and Alcoa, the world's biggest aluminium supplier, have all come up with proposals for high-speed manufacturing of contour cans. They see it as a matter of survival, even though such cans might form only a small sector of the overall

But problems in the development of the contour technology have been greater than expected.

UK's market manager, says: drinks can which will be much trade magazine.

so far down the line with alumintum cans and then found that the cans did not have the right axial strength and collapsed in the filling and seaming pro-

It is likely that a steel contour can could provide a stronger answer. Sollac, the French steel company that is part of Usinor Sacilor, has shown Coke its prototypes of cans using special steels designed for reforming, but will not talk about them. These low-carbon steels are ductile for forming, yet harden during manufacturing so they can resist the rigours of filling and distrib-

in any case, the traditional drinks can is unlikely to be transformed overnight. Investment in manufacturing facilities in the more than 250 plants worldwide will as ever be directed toward high productivity and material

cost reduction. And there are other ways of The writer is editor of The Can-Robert Miles, Continental Can transforming the look of the maker, a monthly international

"People have made progress with casier to deliver to the consumer this but they hit problems that than the contour can – and many they had not expected. They got regard that as being at least a year away.

Alcoa's packaging division, for example, is working on a technique for embossing the walls of the can with a pattern that is registered to the printed graphics. Test marketing is expected in the US early next

The easy-open lid, the most expensive and demanding component of the can to manufacture, is being further developed. The familiar stay-on tab has become an industry standard since 1978 when it began to oust the less ecologically friendly ring-pull. and has so far resisted all chal-

The latest developments of this are versions with larger pour openings being used by Coors. the US brewer, and a spouttype called the Touch Top from Ball, a US-based packaging com-

Virtual couture

Vanessa Houlder on cutting waste in fashion design

ashion design is often a hit-or-miss affair. The vast majority of ideas are rejected before they reach the

Cutting down the waste in the design process is one of the aims of a "virtual reality fashion design studio", a project that forms part of the Virtuosi research programme, which is sponsored by the UK's Department of Trade and industry. It aims to demonstrate how virtual reality can improve business

The £3m Virtuosi project is the work of BT. Division. BICC Group, GPT and the Universities of Nottingha Nottingham Trent, Lancaster and Manchester, with additional support from Nottinghamshire County

The goal of the virtual reality fashion design studio is to allow people in different locations to share a three-dimensional view of a garment and collaborate in its design. It uses a digital network to link two or three participants who use a headset or monitor, with a mouse, to move around within a virtual studio, containing patterns.

fabrics and a mannequin. While discussing the design over a video link, the participants – typically a designer and a buyer - can experiment with changes to fabric, cut and length by clicking on a mouse. The garment is "worn" on screen by a mannequin, which can be made to move using voice commands such as "face me" or

"raise your arm". One of the main limitations is that virtual design cannot convey the tactile quality of the cloth. However, its champions argue that it is an advance on paper representations because it can model the drupe and movement.

Stephen Gray, a professor in the department of fashion and textiles at Nottingham Trent University, is convinced that

the virtual design studio could become commercially viable within a few years. He also believes the technology is applicable to other industries. such as architecture, retail and

stage design. In the case of fashion design, Gray believes there could be a strong commercial case for using virtual reality to facilitate more collaboration between suppliers and retailers, "If we can reduce the number of samples by half by involving buyers in the design process. there would be economic dividends," he says.

He acknowledges, however, that interest in the technology would depend on increased commitment to collaborative working between designer, manufacturer and retailer. The technology will enable you to do things but a cultural change is necessary to capitalise on the technology."

In a related application of this technology, Nottingham Trent University is working on virtual reality catalogues for mail order companies. Customers would be able to dial into the catalogue and see different garments on a tiree-dimensional managuin representing their size and

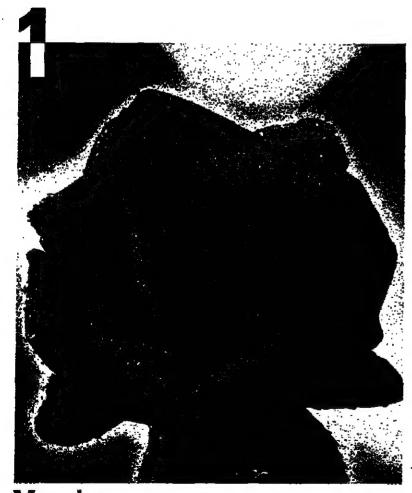

An individual's measurements could be taken using another innovative technology: an electronic measuring booth, designed by Telmat of France. The Telmat booth, located at the International Clothing Centre just north of Nottingham, uses a digital camera to capture an individual's silhouette. Within seconds, it is translated by software designed at Nottingham Trent University into 50 or more dimensions that can be stored on a database or smart card. The booth also takes account of the impact of

This measurement technique could cut the costs of bespoke tailoring to just 10 per cent more than mass-produced garments, say its researchers.

You keep the roses.

Modern IT systems promise you the flexibility and speed you need to keep that crucial step ahead of your competition. The breathtaking pace with which new technologies are being developed for distributed systems and complex network structures is opening up brand new freedom and a wealth of options for custom-tailored IT solutions. The real world, though, shows that this new freedom also brings with it a host of new problems.

We worry about the thorn's.

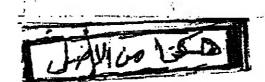

Maximum system availability hinges upon comprehensive support and cross-vendor know-how. Manpower and expertise that often enough exceed the capabilities of your own team. That doesn't have to be a problem for you, though, if you put your trust in a competent partner who will stand by you right from the very beginning in planning, designing, deploying and operating your custom-tailored IT solution. A partner who will take the bothersome routine work off your hands and let you focus on your core business.

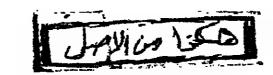

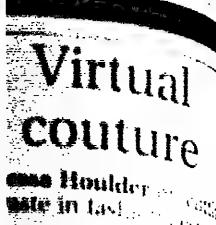

Information Technology without the Thorns.

So you can concentrate on the challenges of your market and leave the deployment and support of your systems and networks to Siemens Nixdorf IT Service. Our specialists have the cross-vendor know-how that's needed to assure maximum availability of your systems. For more information, simply fax this ad to us at +49-89-636-4 55 79. Don't forget to add your name and address!

No bar to drug imports

- ber state into another when the products have been lawfully placed on the market of the first member state by or with the consent of the patent-holder, the European Court of Justice ruled last week.

The court said patentholders could not block such imports even when the products did not benefit from patent protection in the first

Merck and Beecham had brought a patent infringement action in the English Patents Court against certain parallel importers which had imported various products, for which the pharmaceutical companies held patents, from Spain and Portugal into the UK,

In referring the case to Luxembourg, the English court explained that prices in Spain and Portugal for pharmaceutical products were lower than elsewhere in the EU and when the products were sold by the patent-holders to wholesalers in those countries they were exported rather than sold in the domestic market.

The crucial point raised by the case was whether the Treaty of Rome provisions on the free movement of rules that granted patentholders of pharmaceutical products the right to oppose importation by a third party of those products from another member state in circumstances where the holder had put the product on the market in that member state, after its accession to the EU, but before the product could be protected hy natent there.

Although the issue had been decided 15 years earlier by the European court in Merck v Stephar, the companies argued that the court should depart from its ear-

that a patent-holder could

Patent-holders not invoke a patent held in cannot block one member state in order to prevent the importation of a product freely marketed by it in another member state. even where that state did not provide patent protection under its national law. It said such action would

> to the aims of the EU. The court dismissed the various reasons put forward by the pharmaceutical companies for overruling its earlier judgment in Stephar. The court said that if the patent-holder, assignee or licensee were able to prohibit the importation of

national markets, contrary

products marketed in another member state by or with its consent, such action would partition national markets and restrict trade. The court further ruled that Stephar was not incompatible with later case law of the court. This case law could be distinguished on the grounds that it related to the granting of compulsory

licences. In such circumstances, it could not be said that the patentee had consented freely to the licensing operations and therefore it was entitled to oppose importation of products made by the holder of the compulsory licence. It followed that where a

national or European law to market its products in a given member state, it could not be deemed, for the purpose of the Stephar ruling, to have given its consent to the marketing of the product. It was for the patentee to prove before the national courts that there was a legal

patentee was bound under

obligation to market the product in the exporting member state. Ethical considerations, such as the need to satisfy the requirements of domestic patients, were not sufficient to justify protective action by patentees. C-267/95 and C-268/95: Merck & Co Inc and Others v

Alec Tsui, who as chief executive will guide the Hong Kong Stock Exchange When the territory reverts to Chinese sovereignity next year, is broadly seen as the safe option.

He has a reputation for being a steady operator, one who has already served in both the exchange itself and the Securities and Futures Commission, the industry regulator. His appointment, which takes

effect from February, ends an exhaustive search both outside and within the exchange. Tsui's credentials marry regulatory experience with time spent in the private sec-tor, and he is seen as both straightforward and clear thinking.

Most of Tsui's career has been spent in the back office, including ing group from 1993 to 1995 and management consultancy with the top management of Microsoft

served as chief financial officer Arthur Andersen, data processing with Swire Bottlers, and systems Merrill also announced the roles at both China Light and Power, the territory's dominant electricity supplier, and the SFC

But Tsui, 47, has enjoyed anything but a plodding career. He was promoted to his present posttion as deputy chief executive less than a year ago, after just two years with the exchange as executive director of finance and operation services. He previously spent four years at the SFC, after eight years' rising up the ranks at China Light and Power.

The chances are that in his new role Tsui will be obliged to step out of the shadows. He takes responsibility for what is Asia's second biggest stock market (after Japan) through a momentous time, when China is resuming sovereignty of Hong Kong - which could put a political slant on his position. Moreover, the exchange itself is

the world's largest software company replaced a six-member "office of the president" with a new eightman "executive committee".

The additions are Jim Allchin and Brad Silverberg, each of whom was given expanded responsibilities for Microsoft's product development groups in an earlier reorganisation, in late October. They now join the software company's top decision-making body. Silverberg is in charge of Microsoft's topselling suite of office applications programs. Allchin's responsibilities include the Windows PC operating system

While financial analysts welcomed news of the latest management changes, some observers see recent moves as a bid to shore up Microsoft's defences against mounting competition, particularly in the office applications sector. Louise Kehoe, San Francisco

Toba's appointment is seen partly as a reflection of intensity. ing competition in the medium. range chain store market, and partly as a response by Daiei to internal management problems and falling earnings outlook. Toha is also regarded as a condidate in the company's forthcoming change in top management.

He established his reputation as one of the food industry's most experienced executives through his long career with Ajinomoto, where he began in 1855 and took over the presidency in 1989.

In 1994, as president of Ajinomoto, Toba negotiated a broad agreement with Daiei to co-operate in various fields, including development and distribution of low-cost food items and other products. The agreement expanded a supermarket price war launched by Dalei in the early 1990s with the introduction of generic products.

Toba is likely to focus initially on Daiei's overseas network of factories and subsidiaries. He is expected to be appointed a director of Dalei at the company's sharehold era' meeting in late May. Guen Robinson, Tokyo

> There is a sense in which all true art is autobiography, for the artist has only his own experience by which to try to come to terms with reality. The trick is to make the work available for us to make sense of for ourselves. It is a question of emphasis, distance. Too close, and the personal content becomes a limitation and a bore: too remote, and it is but an academic exercise.

With Picasso's portraits, we could not have the problem set out and resolved in plainer terms. The show opens and closes with self-partraits: there is no more direct a way for the artist to place himself at the centre of his work. The youthful Picasso playfully sets a peruque upon his head in an image fresh and confident in its academicism. The old man, gaunt and terrible at 91, bleakly confronts mortality. In between there are his friends and, repeatedly, himself, and above all, there are his women.

This show is set quite deliberately upon the framework of Picasso's successive relationships with women, his models, mistresses and muses whom he used, tired of and discarded as he moved on to the next. Some, like Fernande Olivier before the great war, or Marie-Thérèse Walter and then Dora Maar in the 1920s, '30s and '40s, he would all but destroy. Of Dora, who was the subject both of some of the most hauntingly beautiful and most frightfully distorted portraits in all the canon, he said he could never see her without feeling her to be on the verge of teers. Her photographs evince an exquisite and natural melancholy: but we

ក្នុង ទីងង្

Prince Season of Season

The pattern repeats itself. The

he full and absorbing portraits early in a relationship study of Picasso as a are closely and tenderly observed portrait painter, with the easy discipline and finesse that underwrote all Picasso's work. Then by degrees the images grow more disturbed, violent, grotesque. Even an element of fear creeps in, that seems to be an actual horror of the essential female. The teeth of a Dora or Marie-Thérèse now gape and rattle like a man-trap in the skull. We cannot doubt that Francis Bacon knew these images.

Friends' wives and women do rather better, though whether by posing no threat or no opportunity, who can say - Sara Murphy in the 1920s, Nusch Eluard in the 1930s and '40s. With them, at least, the tender interest remains. Some of his own women, like Francoise Gilot in the 1940s. stand up to him, to escape more or less unscathed. The last wife, Jacqueline Roque, who succeeded Françoise in the early 1950s, evidently managed him firmly enough through his last 20 years.

ambiguous reversal

becomes apparent in this later work. It is the artist who grows distorted and grotesque, monkey-like and impotent voyeur; the model remains perfect in her beauty. And we realise perhaps that it was ever so, even in the artist as a younger man. That strange etching, "Minotauromachie" of the mid-1930s, on show with early prints at the Musée Picasso, has Marie-Thérèse as a torero lying exposed and dead, torn by the Minotaur-Picasso whom she has so tormented, while a younger Marie-Thérèse holds high a candle to lead the suffering beast out of the maze. In other images, a Minotaur caresses a sleeping woman; lifts the sheet from her bed; kissee again that girl-torero. Just so, an early water-colour (1904) has Picasso contemplating the sleeping Fernande.

But though the artist sets himself at the centre of the work, it is not yet self-obsessed. With all his modernism, we tend to forget how deeply rooted Picasso was in symbolism, and here his use of myth and symbol, universally acknowledged and understood in all their ambiguities, effectively

acceptance. We recognise Picasso address, we find a complemenin it, but we make sense of it not tary return to fundamental discifor him but for ourselves.

And we are thrown back onto no comfort here for those who,

plines and practice. We follow their exploitation, development the painting as painting. There is and expressive variation, and so back again. We look at that line even now, hold Picasso to be an in the drawing, so taut, nervous,

atory delicacy and intuition.

Picasso's sister Lola, high-coiffed, young and handsome, stares boldly back at us across the century. Here is his dancer-wife, Olga Khokhlova, in 1923, as monumental as a rock. Nusch Eluard incompetent technician and cynical exactly descriptive. We look at in 1941, half-length and naked, is cal opportunist. For, in the con- the paint on the surface, laid on as delicate and fragile a realisa-

A fine Siegmund from Domingo

he Royal Opera will have done very nicely out of its one-off Die Walkure last Friday: every stalls seat sold at £250, front-of-grand-tier at £275 - and great economies achieved on rehearsal-time too, as one heard. As one also hears, 200 Britons become nouneour millionaires every week now; so that's all right, then.

The opportunity was provided by Plácido Domingo's 25th anniversary as a regular visitor to Covent Garden, but never until last week in a Wagnerian role. (Elsewhere he has performed Lohengrin, Parsifal and Siegmund, and recorded Tannbäuser .) It was convenient to bring back Die Walkure, last seen only weeks ago, surround Domingo with singers already inured to the Richard Jones production, and let the great tenor get on with it.

The fine original conductor Bernard Haitink, however, was not part of the package. It was left to Simone Young to do what she could in the circumstances. There were grave failures of rapport between her and the singers, and much orchestral disarray as far as the prelude to Act 2: but thereafter things improved rapidly. Miss Young does know how the score goes (though her slow paragraphs always lacked tension). With first-class voices giving of their best, and the staging much tidled and sharpened since first time round, many millionaires would have thought £275 per head well spent.

Domingo slotted himself into Jones's quirky staging with dignity, and from his opening phrase - elegant, musical, suffused with feeling and levered upon what seemed a single breath - we knew we were hearing a foreign Siegmund of great distinction. Bis German address was not idiomatic: endings in "-en" were oddly bright ("ras-ten", "hel-fen", "umfang-en"). In rapid syllables all those consonants! - his line faltered, and "ee"-vowels on upper notes sounded constricted But why quibble, when Domingo had so much artistry to spare?

The sense of every line was exactly felt and transmitted. He is good at looking romantically haggard, too, noble but bruised in fact the only side of Siegmund we missed was his ecstatic release later in Act 1, where Domingo offered just sober eloquence. Still, he rose to a thrilling cry of "Wasaal-sungen Blut!" at the end. And in the Act 2 "death-annunciation", where many a Siegmund turns into an ordinary baritone, the marvellous lower reaches of Domingo's tenor were simply. wrenchingly expressive, tapped with absolute finesse.

Brünnhilde, Wotan and Fricka were again superlatively done by Deborah Polaski, John Tomlinson and Jane Henschel, in place of the indisposed Anne **Evans**, the American Karen Hullstodt made her debut as Sieglinde here. Too slow and lachrymose at the start, I thought; but she developed before our eyes and ears into a figure of wild, passionate extremes - always sung from the heart, and polgnantly affecting.

in the prices of housing.

"Global free trade has become a sacred principle of modern economic theory, a sort of moral dooma. That is why it is so difficult to persuade our politicians and economists to reassess its effects on a world economu which has changed radically." Sir James Goldsmith.

Not long ago Sir James the Anglo-French billionaire, had a bigger target than the the UK's place in the European Union in his sights. His enemy was global free trade. Free trade, argued Sir James in his book, The Trap (Macmillan, London, 1994), pitted the high-income countries against the competition of billions of impoverished workers.

Fortunately, such simplistic protectionism has made little political headway. But the pressure has not been without its effect. Already, the US and the EU have placed the link between labour standards and trade on the agenda of the World Trade Organisation.

Maybe this reflects a sudden concern for the welfare of the poor in China or India. And maybe the moon is made of Stilton cheese. More plausibly, this is a foolish way of diverting domestic protectionism. If so the approach cannot work. Either developing countries will reject the demand; or agreed standards will turn out to make no difference to underlying economic forces; or the standards will be used as an

excuse for protection. Behind the demand for labour standards is a more fundamental question. Must global liberalisation impoverish, if not everyone in rich countries, at least the relatively disadvantaged? This cannot be answered merely by gesticulating in the direction of the billions of people hammering at the gate. What is needed is meticulous analysis.

A number of distin-

tions to this topic. The latest - and in some ways the most impressive - is a new book* by Robert Lawrence, professor of international trade and investment at Harvard University's John

F. Kennedy School of Government, among the world's foremost empirical analysts of international trade. So does trade with developing countries threaten bayoc in high income ones? Not guilty is the author's reply. questions addresses can be divided

into three: Has trade pauperised high income countries? Has trade created increases in inequality? What would happen in

future if trade with countries like China and India were to grow at rapid rates? How, it is asked, can workers compete with peo-ple earning a fiftieth of their wages? The answer is "quite easily". China's wages are so low because its average productivity is low. When its productivity extehes up, so will its wages.

The fear of pauper labour derives from a wilful refusal to make the effort needed to understand the theory of

White coller

- Blue coller

made substantial contribu- This says that China will export the goods it can make relatively more cheaply than the rest of the world - those where the relevant technology and skills can be imported easily and where unskilled labour is

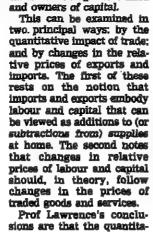

used most intensively.

Even if the fear of general impoverishment can be dismissed, people may still worry about the trends. In the US, in particular, notes Prof Lawrence, between 1973 and 1994 real compensation (including employers' contributions for social insurance and private benefit plans) of workers (including the self-employed) rose only 8.6 per cent.

This dismal performance helps explain the gloom of many workers. But why did it happen? A part of the answer is that output per hour rose only 24 per cent. This is pretty poor over two decades, but is explained by the low measured productivity growth in services. The question, however, is whether trade explains any of the difference between the growth rates of real output and of real compensa-

tion per worker. The answer is no. The share of labour income in

Has trade caused inequality between workers?

tive effects of changes in trade "explain only about 10 per cent of the rising differential between high-school and college workers in the US". The terms of trade improvement needed to

guished economists have comparative advantage, the value added of the busi- lower the relative wages of unskilled workers also did

not occur. He estimates that the impact of trade on the relative demand for collegeeducated versus high-school educated workers in the US was only about a third of the impact of "de-industrialisation" - which covers shifts in demand and relatively rapid productivity growth in manufacturing. Trade also amounted to only countries. The question about a fifth of the impact then is whether trade of changes in technology and organisation that increased the relative demand for skilled labour.

What about the future? Here Prof Lawrence makes the extreme assumption of complete specialisation by the US in relatively skillintensive areas of produc-tion. Compared with 1990, the relative demand for high-school educated workers would still fall only 7.5 per cent, other things equal, which would imply a 2.5 per

cent decline in real wages spread over many years. The impact of globalisation on labour markets in industrial countries has been far less significant than many observers argue. The same is almost certain to be the case in future. The important question about performance in high income countries is why overall productivity growth has become so slow and increases in demand for

analysts have to look. In the meantime, poor for eigners must not be blamed for problems rich countries are unable to solve for themselves. Nothing may be more natural. But nothing can be more dangerous. To permit the protectionist horse to pull the global political cart down that road would be a historic blunder

skilled labour so strong.

That, not trade, is where

*Robert Z. Laurence, Single World, Divided Nations? (Brookings Institution(OECD Development Centre, 1996)

Burma's junta may be facing sanctions but is likely to survive, writes Ted Bardacke

Rangoon wrangle

in central Rangoon, is a good place to check on the political priorities of Burma's mil-

itary junta. Earlier this year, the State Law and Order Restoration Council, as the junta calls itself, used Kyatkasan as the venue for its "National Convention", an assembly charged with drawing up a new constitution that would give the military "a leading role" in the country's affairs.

Growing political unrest has forced the indefinite suspension of the National Convention, which made Kyat-kasan - surrounded by high walls topped with barbed wire - available for a different purpose last week: hundreds of student protesters, rounded up after participating in the largest demonstrations to hit the country since a violent crackdown in 1988 were sent there to be identified and interrogated before being released.

in the emphoria surround ing the release of Nobel Peace Prize winner Ms Aung San Suu Kyi from house arrest 18 months ago, Slorc's vision of the National Convention paving the way for an orderly transition to some form of stable semicivilian rule seemed plausible. But the optimism has

The domestic economy continues to grow but the country's external situation is delicate. Foreign currency reserves have fallen to their lowest level in a decade covering only a month of imports - and key export markets in the US and Europe are close to being restricted by sanctions over human rights abuses and political repression.

The economic problems mean Slore may not be able to fulfil promises of development funds for 15 still restless - and armed - ethnic insurgent groups. Most have agreed cessetires with Slore, but five of the 15 have either begun fighting again or have Things aren't unravelling

"They've been in power eight years and tonight the generals are sitting in their war room still preoccupied with crisis management." One positive sign for Slore is that the Association of South East Asian Nations is

one diplomat in Rangoon.

set to admit Burma as a full member in July 1997, a goal long sought by the regime in an attempt to bolster its international legitimacy. But Asian diplomats say that even Asean membership could still fall through if the internal situation in Burma deteriorates substantially between now and the end of February, when a final decision on membership will be made. Thus the need to keep the students off the streets -

Most of today's students have been careful to limit their demands to student issues, giving Slore little excuse to crack down in the same way as it has on Ms Suu Kyi and her National League for Democracy. But as the protests have grown, political demands have found their way into the stu-

and out of jail.

Ms Sun Kyl has been watching events with a quiet confidence. Effectively confined to her home once again, she has denied any links with the students but she has stressed that the stu-

Healthcare: From Utopia to Mixed Economy

At mid-century, the establishment of Britain's National Resith Service (NHS) helped inaugurate an era of greater state involvement in healthcare. Now, according to the head of an association of independent healthcare providers, the NHS is again leading the way by making greater use of private expertise and resources.

Fifty years ago, the ideas underpinning the UK's National Health Service (NHS) beloed lead the developed world to a new era of centrally planned healthcare. The assumption that government could and would provide all the resources necessary to cope with the demand for health and social care was at the heart of a political consensus which dominated public policy for more than forty years.

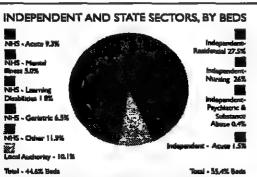

While the 1944 White Paper, A National Health Service, initially estimated that

the state system would cost £132 million per year, the NHS actually ended up costing the tax payer a massive £305 million in its first year of full operation, 1949-50. Thus, the Government realised early on that it could not afford health services that were entirely free at the point of use. Although this was one of the founding principles of the NHS, it was actually abandoned within five years of the 1944 White Paper. as charges were gradually introduced for prescriptions, spectacles and dental treatment, and techniques ranging from cash control to queuing were used to limit

By the mid-1980s, it had become obvious that the old "top down" structures of NHS centralisation would no longer suffice. Under a new system introduced in the early 1990s, the NHS was divided between purchasers and providers, who were given a greater degree of freedom

Although the changes were controversial, it now appears that Britain was, once again, in the forefront of a trend which has seen governments the world over embracing a more mixed economy approach in health and social care. The NHS reforms signalled an important departure from the post-war world provision. Yet today, as the most influential of largely uncosted, bureaucratic and

producer-led healthcare. Under pressure from the forces of economic plobalisation. adverse demographic trends and rising consumer expectations, political elites are busy exploring new ways in which private finance and expertise can be reintroduced into national healthcare systems. In the UK. policies such as the "Internal Market", the "Private Finance Initiative", "Privatisation", "Market Testing", and "Contracting out"

are all encouraging bridges between what some term a utopian and unsustainable past, and a depoliticised, sustainable future.

The revolution that has taken place in UK health and social care in recent years means that there are now more beds in the country's independent health and social care sector (443,000) than the NHS and Local Authorities combined (355,000).

The UK's independent health and social care sector is an important employer. It currently employs 500,000 people, the majority of whom are women. There are also 76,000 independent professionals working under contract to the NHS, including doctors in general practice, dentists, pharmacists and opticians. Additionally, three quarters of all hospital consultants have some form of private

While some people still believe that the NHS had its heyday in the 1950s, '60s and '70s, and that during this period it was a largely unchanging institution, history reveals that the service has always had to adapt and change to circumstance.

In the 1940s, the Fabian Society was in the vanguard of the country's healthcare reforms, as devout advocates of public ownership and the nationalisation of of the centre-left think tanks in the UK, the

Fablans are once again mapping out the type of healthcare reform demanded by the age. In a recent Fabian Society paper called Accountability not Ownership, author Kathy Jones stated: "High quality private aector providers, mainly hospices and nursing homes, have long histories of providing care for NHS patients at the expense of the taxpayer. This is neither sinister, nor damaging to the concept of public service... Labour

should recognise that private provision does not mean the end of free health care at the point of need. Publicivpurchased services can be, and are, delivered by privately owned institutions without users having to pay. There is no reason why healthcare providers should be publicly owned.1

Today, the UK's independent health and social care sector makes a major contribution to the health of

the nation and is a sub-stantial sector of the economy in its own right. If other countries want to learn from the UK's recent experience, they will value a policy environment which encourages a diverse and vibrant independent health and social care sector. Above all, in recognising the importance of visionary thought, they will be mindful to guide their respective systems away from unsustainable utopianism and towards a more practical and honest mixed economy approach.

Barry Bassell is the Chief Executive of the independent Healthoure Association, the lead association of the UK's independent health and social care sector. IRA, 22 Little Russell Street,

Short life for euro coin likely

From Mr Sekaya Hodson Sir, Those who have

worked in Europe in recent years, like myself, will generally endorse the views expressed by Mr Jacques Santer, president of the European Commission, on the benefits of Emu (FT Interview, December 2). Nonetheless, the full implications of Emu and the difficulties arising from Maastricht's timetable for the imposition of a single currency still give genuine As for the shape and form of the single currency, this is surely a matter that need not cause us too much con-

cern. Taking a long-term view of our use of currency it is evident that coins and banknotes will soon be deemed outmoded in a European economy increasingly dependent upon sophisticated technology for mone-tary transactions and with the universal, and exclusive,

cards by consumers. As a consequence, not only will Europe's individual national currencies be phased out but the same fate awaits Euro coins and banknotes issued by the European Central Bank, in spite of Article 105a of the Mass-

Selwyn Hodson Pressinger, 189 Rue du Fanhourg St

called them, in time series.

use of credit cards and debit

Honoré. Paris 75008, France

Pause for thought over use of graph

From Sir Alan Walters. Sir, In his article "Dear Ken, be decisive" (December 3), Martin Wolf uses a graph to illustrate "how monetary growth precedes inflation". He draws this conclusion by comparing real monetary growth (the percentage change in M4 divided by the ntage change of RPI[x]) with the contemporaneous rate of inflation, again in

But one should pause before adducing anything from this graph. Consider a monetary policy on perfect

Friedmanian lines – namely a constant 5 per cent rate of growth of the nominal money supply. Then only variations in inflation can affect the rate of growth in the real money supply. If inflation increases then the rate of growth of real money falls, and if inflation falls the rate of growth of real money rises. There is a perfect negative correlation (-1.0) between real monetary

growth and inflation. This is one among many "nonsense correlations", as the great statistician, Udny Yule,

Of course, normal monetary growth rarely performs exactly according to the Friedman rule and so such variations have their additional effects, often with variable and long lags. But the dominant "nonsense correlation" renders any monetarist interpretation, such as that drawn by Mr Wolf, dubi-

> Alan Walters, AIG International, 120 Leman Street, 6th Floor, London E1 8EU, UK

Weakness

From Mr Matthew J. Turner. Sir, Of course Barry Riley is correct to say not every country can have a weak currency if by that he means relative to other currencies ("Not everyone can have a weak currency", December 4). It is, though, plausible for all countries to have weak Currencies relative to (sav) gold. It is even true that every country can follow weak currency policies. For Europe, and Germany

and France in particular, the actual level of the franc and D-Mark against the dollar is not the crucial issue. France is enjoying a large current account surplus at today's exchange rate. What is more important for the health of their economies is the level of interest rates. The only floor to these is the Bunder

bank's fear of inflation. A large reduction in European interest rates still remains the best way to get European economics growing again, no matter what the level of the dollar exchange rate is.

Matthew J. Turner. 40a Maud Road. London E18 OJU, UK

Directive on recycling of cars should be applauded

From Mr Roger Higman. Sir. Your leader "Scrap Directive" (December 5) on car recycling argues that the European Commission should encourage voluntary arrangements to encourage car recycling rather than force manufacturers to take back and dispose of cars at the end of their life. You base your conclusion on the fact that 75 per cent, by weight, of the average end of life car is already recycled.

This is completely missing the point: 75 per cent of the average car is recycled because that proportion of the car is metal. The metal component of cars has been commercially recycled for

The issue the European

address is the recycling of the non-metal component of cars. Here, both the market and voluntary agreements have failed. As a result, most of the non-metal component of cars is land-filled. The purpose of the Com-

mission's regulation is not, therefore, to do what the market or voluntary agree ment could do better, but to do what the market and voluntary agreements cannot do - ensure that virtually the entire car is recycled at the end of its life

That, you should applaud. Roger Higman,

senior campaigner (atmosphere and transport). Friends of the Earth. 26-28 Underwood Street London N1 7JQ, UK

EU pensions liability could fall on UK

From Mr Toby Eckersley. Sir, It is now being put about (for example, Lex column, November 2) that UK taxpayers have nothing to fear from the worse actuarial condition of other European state pension schemes because those other states will bear the consequences by paying higher interest

rates for their bond issues This argument depends upon the fulfilment of at least two constitutional conditions:

 The European Union permitting member states to issue their own bonds. The absence of a Union guarantee of such borrow-

It might be readily said that both conditions would be fulfilled. Yet if enough

states (by the relevant qualifled majority vote) perceive that they would benefit from coercing the minority, what would stop them adding EU guarantees to such borrowings? They would use the same arguments used by the UK government for tight central control of local authority borrowing to regulate European state borrowings in such a way as to coerce the more creditwor-

thy states into lending their

good name to Union issues

or guarantees, thus bailing

out the less prudent.

ask France to show a similar degree of flexibility. Reforming Nato, by strength French problem arises from ening its European pillar, is important: it should help reassure the Russians that the alliance is not the same coldwar institution it used to be. But equally Nato needs to bind the US to Europe. President Bill Chinton's appointment of Senator William Cohen as defence secretary is an indication of his determination to maintain his Nato commitment. Both US and west Europeans now need to settle their differences to concentrate on the most important task ahead: enlarging the alliance to become a force for stabased job includes responsibil- bility throughout the continent.

COMMENT & ANALYSIS

A big bang in slow motion

The Japanese government's latest plan to deregulate the financial markets stops short of radical reform, says William Dawkins

kers were initially sceptical when Mr Ryutaro Hashimoto. the Japanese prime minister, announced last month that he planned a "big bang" to boost Japan's equity market to the size and sophistication of New York within five years.

cent ceiling in the US and 49.9 per cent in the UK and EU as a It was hard to believe that he would break with the past prac-These are substantial issues. tice of easing government conwhich may take time to resolve. trois slowly enough to allow the There is no reason why they weakest financial institutions to should be bound to the muddle through. That strategy timetable of a proposed arrangeensured some stability. But, as ment between two individual the Japanese leader now accepts, airlines, especially since it also throttled innovation and such arrangements often prove may even have worsened the recent banking crisis. If, on the other hand, the oper

Fearful that Tokyo financial markets are stumbling closer to disaster - a penalty for high costs, burdensome regulations and a series of mishaps - the government is making its most serious attempt to date at financial deregulation. True to Mr Hashimoto's new

promise to allow market forces to rule, the finance ministry followed up the big bang plan 10 days later, on November 21, by ordering the closure of an insolvent regional lender, Hanwa Bank. It is the first forced shut--down of a dapanese bank in more than half a century, and a swerve away from the tradition of keeping dud institutions artificially

There are reasons to be sceptical, not least because some powerful members of the ruling Liberal Democratic party are resisting a big bang, and the plan itself fails to address some of the Tokyo market's greatest weaknesses. But most people assume that most of the main points of Mr Hashimoto's big bang will become reality. Foreign banks and stockbrokers anticipate a revival in the Tokyo canital markets, and have started to reinvest in their Tokyo operations.

Japanese brokers are responding too: Tokyo-based Maruko Securities and Osaka-based Daika Securities have announced they are to merge in an early indication of the consolidation that will in due course sweep through the overcrowded broking sector.

The plan includes full deregulation of commission on equity sales and insurance premiums, probably from next year. Banks

ankers and stockbro- and stockbrokers are to be allowed to enter each other's daily equity turnover - Tokyo businesses, probably in two

> Pension-fund managers are to be free to invest more money in equities, now limited to 20 per cent of their portfolios. All fund managers will have to disclose the market value of their investments so that their performance can for the first time be compared with that of their western competitors. Also planned is a move towards international accounting standards so that investors can assess the real value of Japanese financial institutions. Licensed foreignexchange banks will, from next year, lose their monopoly.

> Nothing on this list is new. All these measures have been debated by various finance ministry panels for a decade or more, with the aim of bringing about a slow-motion version of the financial deregulation seen in New York and London. What is new is the 2001 deadline.

Will the plan succeed? Mr Hashimoto should have a better chance of speeding up financial reform than his predecessors. First, Mr Hashimoto's political

survival depends on his ability to nomic deregulation. His minority government is hanging by a thread, with the LDP's authority undermined by a series of corruption scandals and a weak economic recovery. He badly needs a

Second, the finance ministry is behind him, now that it has suc-Hashimoto's original deadline by a year to fit its own strategy of withdrawing state support for the banks by the end of the decade. "Yes, we are very serious...we will hit the target," says a senior ministry official.

Third, the stockbroking industry has abandoned its resistance to deregulated commissions. As Mr Takashi Kanasaki, managing director of Yamaichi Securities one of Japan's hig four stockhrokers, explains, deregulated commissions might belp boost the equity market's flagging turnover, the main reason why Japanese brokers' profits are so

It is not hard to see why there is a new urgency. Many Japanese had the biggest and most active financial markets in the world. But since the 1989 share price

collapse, Tokyo has lost out to

cheaper and more efficient markets in the US, Europe and even Asia on almost every count. While other equity markets were exploring new highs before last week's shakeout, Tokyo now stands at just over half its 1989 peak. At the turn of the decade, monthly trading values in Tokyo and New York were about equal; now Tokyo's trading value is one-fifth that of New York. Tokyo's

turnover in shares has fallen by

almost 70 per cent from its 1988

Worse, Tokyo is losing its importance as the place to trade Japanese equities. Over the past five years, the proportion of Japanese shares traded in London (where commissions were dereculated just over 10 years ago) has tripled to 18 per cent of the total volume in Tokyo.

The proportion of foreign shares traded in Tokyo has declined, demonstrating its fading credentials as an international market. The number of foreign companies with a Tokyo deliver on this and other eco- listing has nearly halved from a peak of 127 five years ago to 68 Japan's 285 second-tier stockbro- markets is this remnant of a bank complains that it pays Y20m (£108,100) a year in legal, translation and administrative fees just to maintain a Tokyo listing, up to three times more than

in New York. The decline in the financial ceeded in pushing back Mr markets is thus not merely a reflection of Japan's own economic stagnation. According to Yamaichi's Mr Kanasaki: "The lack of activity in the Tokyo market last year stems from structural problems. Unless the Tokyo market can shake off structural impediments, such as its peculiar characteristics, the market will not regain its previous vitality."

Yet the finance ministry recognised those structural problems years ago, and has already taken concrete steps to remove some of them in the equity and other markets.

Three years ago, for example. commercial banks were allowed to underwrite corporate bonds though they cannot trade bonds

enter each other's business. at James Capel Pacific. In addition, some pieces of deregulation are taking place on the quiet. Citibank, the US bank. is close to getting the all-clear to link its automated teller machines with those of the post office. This will allow postal depositors to withdraw cash from any Citibank terminal in the world, a blow to the Japanese travellers' cheques industry, points out Mr Paul Heaton, senior analyst at Deutsche Mor-

policies - which it does at a 30 per cent discount - by mail. If the consensus for financial reform is growing, this invites the question of whether the measures outlined in Mr Hasbimoto's plan are enough to close the gap between Tokyo and New York.

The signs are that the blueprint

gan Grenfell in Tokyo. Last

month American Home Insur-

ance became the first foreign

insurer to be allowed to sell car

contains several large holes. It fails, for example, to propose how the authorities are to get an early warning and take corrective action to minimise the large number of financial collapses that would result from the competition unleashed by reform. now. No wonder. One European kers and some of the smaller financial system dictated by pol nerable.

> have about 670 financial inspectors - onetwelfth the number of their US counterparts - a legacy of Japan's highly regulated market and its orderly society in which everyone can be assumed to be observing the rules.

That assumption has been shown to be false by the Daiwa Bank scandal in which a dealer in the New York branch made \$1.1hn (£670m) of losses in unauthorised bond trading, and by the uncontrolled lending which contributed to the Japan's housing loan crisis. Fewer controls suggest an even more pressing need for additional officers. And yet the government's plans are to cut the bureaucracy, not enlarge it. "If you don't have proper inspection and supervision, you won't or underwrite equities. Then, two have a big bang, but a cataonce took pride in the thought months ago, life assurers and strophic explosion," warns Mr painful.

that on some counts - such as non-life insurers were allowed to Brian Waterhouse, senior analyst An even larger hole in the blue-

print is its failure to tackle Japan's system of subsidised post-office savings. The post office, the world's largest savings bank, has traditionally offered depositors higher rates than banks and well above the yield on equities. It is the key to Japan's post-war system of extracting individuals' savings for re-direction into strategic industries.

Only the most bullish Japanese investors are likely to move their life savings from high-interest. state-guaranteed post office accounts into equities - which over the past five years have offered little yield and a big capital loss. Sensibly, Japan's savers have increased their outstanding postal deposits by nearly 45 per cent to Y220,000bn over the same period. That is why the average citizen keeps less than 10 per cent of his assets in equities and investment trusts, as against his US counterpart's 26 per cent. It is this shortage of equity

investment by individuals which most distinguishes Japan's financial system from that of the US. "The single biggest reason for the The less well-capitalised of inefficiency of Tokyo's financial banks are thought to be most vul- icy. That is what distorts prices." says Mr Yukihiko Endo, a policy expert at Nomura Research Instihe Bank of Japan and tute. Accordingly, senior bankers the finance ministry and stockbrokers have criticised the Hashimoto plan for failing even to mention the post office. There is a consensus that the

financial markets need radical reform. But the risks of corporate failure are probably too great for the full "big bang" programme to be implemented by the 2001 deadline, and the plan itself fails to tackle the biggest distortion to Japan's financial markets, it is very unlikely that a government Would ramove postal savers' privileges in the plan's lifetime. So this is as serious about reform as Japan is likely to get.

That said, deregulation in Japan's financial sector is moving much faster than elsewhere in the economy. Even if those who are sceptical about Mr Hashimoto's deadline are proved right, the rationalisation of the financial sector will still be

BSERVER.

Commission competition

The scramble to replace David Williamson as secretary general of the European Commission is under way. Within days of Observer's disclosure that Williamson is ready to retire next year, a front-runner has emerged in the form of his denuty Carlo Troian - a half Dutch, half-Italian Mr Fix It who is master of the grand compromise at Euro-commits like this week's gathering in Dublin.

But it won't be plain sailing. given the reluctance of big countries like France to hand out too many jobs to smaller nations. Trojan's fellow Dutchman Wim Duisenberg is already the next head of the European Monetary Institute and favourite to run the future European Central Bank. Jose Cutileiro, a Portuguese, is secretary general of the Western European Union defence body. And Jacques Santer is the second Luxembourger in 15 years to become president of the European Commission.

indeed. France has a particular attachment to the post of Commission secretary general because a Frenchman Emile Noel - held the job for the first 30 years of the European Community's life. The trouble is candidate. So what happens if President

Chirac decides to block Trojan on principle? The dark horse is Eneko Landeburu, the Basque head of the regional aid directorate, a former favourite of Jacques Delors, and a top-rate manager having previously worked for Nextle to Switzerland, Landeburu's trump card? He was educated in Paris.

Lady in white

The Ukrainian parliament has gained a weighty - and wealthy new member in Julia Timashenko, youthful president of United Energy Systems, the gas distributor with sales of \$5bn this year, equivalent to about 5 per cent of the country's GDP. Soft-spoken Timashenko favours demure white dresses and looks an onlikely perliamentarian - or tycoon, for that matter. Her rags to riches story, as she tells it, involves school in Dnepropetrovsk and a job at Yozhmash, once the world's largest missile factory, before going into business in 1990.

Her landslide by-election success certainly had powerful political support in the shape of prime minister Pavlo Lazarenko. He hails from the same home town and dreamt up the gas distribution scheme that was the making of United Energy.

she spends several days a week in Kiev, the capital, occupying the largest suite in the renovated National Hotel and protected by Kalashnikov-toting bodyguards.

into the swing of political life;

Virtue rewarded

■ In Mexico, government officials who out-shine the president tend to have unexpectedly short careers. This is a long-standing tradition; in ancient Maya times kings would execute successful warriors, rather than stand in their shadow.

So when his popularity ratings zoomed ahead of those of president Ernesto Zedillo, Antonio Lozano must have suspected that his days as Mexico's top law officer were numbered.

In two years as attorney-general, Lozano jailed Raul Salinas, the elder brother of former president Carlos Salinas, on charges of murder and illicit enrichment. He captured Juán García Abrego, a drug trafficker on the FBI's most-wanted list. He fired hundreds of cops in the pay of drug cartels. So Mexicans are more than a little surprised to see Lozano being dismissed for

incompetence. Zedillo may have had a

stronger reason. Lozano having been the only opposition member in his cabinet. With elections icoming in 1997, the ruling Institutional Revolutionary Party (PRI) was clamouring for Lozano's removal. Why enhance the opposition's appeal with Lozano's success?

Lozano will linger as a thorn in the PRI's side. His supporters in National Action, the conservative opposition party, are touting him as the next governor of Mexico City. With the PRI trailing badly in the capital, Zedillo may have yearned for a Maya-style method of truncating the attorney-general's career.

Foul-mouthed

Forget bribery and corruption, whoever replaces Antonio Lozano as Mexico's attorney-general will to have come up with a policy on bad language. City fathers in Guadalajara, the country's second largest city, have banned swearing at soccer matches in a crackdown on lewd insults. Offensive offenders face stiff fines and a spell in jail under the ban introduced by the National Action Party, which controls the city council and has already forbidden foul language in public markets. They must be going for the referees' vote.

Financial Times

100 years ago The Italian Budget An Italian Finance Minister

delivering his Budget speech is not a gentleman to be envied. He has to deal with no less than three Budgets namely those for the past, the current and the future financial years. However, there is one advantage about this complicated arrangement, for, like a juggler, he can so confuse the mind by playing one Budget against the other as to leave a very vague notion with regard to what the condition of the country's finances really is. It speech that the hiatus has been reduced to relatively small dimensions by the free use of supplementary credits that will have to be paid for some day or other.

50 years ago Austerity For France

M. Robert Schumann, Minister of Finance, will tomorrow submit to the finance committee of the French National Assembly a new general survey of national finance. The re-establishment of the balance of revenue and ordinary expenditure is, it maintains, an essential prerequisite to the restoration of confidence in the currency, on which everything depends

Electronic warfare

Philips has got itself into a frightful twist over Thomson Multimedia's privatisation. After denying it was complaining about the French government's plan to inject FFT10bu (\$1.9bm) into the near-bankrupt consumer electronics group, it wrote to the European Commission expressing its concern that this might amount to a "serious potential distortion to competition". The commission certainly viewed the letter es a complaint, but the Dutch electronics group is denying it was any-thing of the sort.

The problem seems to be that Philips wants Thomson tied in knots but without its fingerprints on the rope. Last week's postpone-ment of Thomson's privatisation will not change the fact that Multimedia needs a recapitalisation. But Philips must be hoping that, as a quid pro quo, the commission will insist it cuts capacity. After all, the Dutch group is having to shed thouthin margins in the consumer electronics industry. A resurgent Thomson fighting aggressively for market share is the last thing it needs.

On the other hand, Philips has many interests to protect in France. So it probably does not want to be seen to be telling tales out of school. Philips may also be sensi-tive to the fact that it too receives state aid - though not on the scale that Thomson is seeking. Complaining to Brussels looks dangerously like a case of the pot calling the kuttle black.

Gold merger

The gold industry is witnessing a dash for size and growth. Only the mining companies are required to finance exploration activities across the globe. The proposed \$2.3bn Homestake Mining/Santa Fe Pacific Gold merger has its roots in this

So far, so good. The snag is that it is far from clear that Homestake would make a better partner for Santa Fe than Newmont Mining, unfriendly offer for the company.

Whatever Homestake can offer in terms of reserves and production, Newmont can match. It also has a more impressive record on growth and exploration, and a better list of projects in the nipeline. There is a further issue: the new Homestake would have larger production, but could still find itself short of growth BAT Industries' insurance interes opportunities. Without these, and

facing fairly high cash costs, it would be unable to bridge the valuation gap that allows companies like Placer and Barrick to trade on much fancier multiples.

Clearly, with Newmont's offer about 12 per cent below Homes-take's, shareholders would currently do better to take the latter. But they could reasonably expect an auction to produce an even better price. Unfortunately, such competitive bidding is not encouraged by the \$65m back-out fee Homestake and Santa Fe have agreed if either reneges. It is difficult to avoid the suspicion that Santa Fe management fears for its future if Newmont was to prove successful.

UK insurance

There are good reasons why Britain's insurance sector is constantly abuse with merger talk. It may seem perverse for big companies to respond to the threat from smaller competitors by getting bigger still. But when profitability is under pressure, even modest synergy benefits are worthwhile. Moreover, Royal Sun Alliance's merger has helpfully concentrated the industry's minds.

The snag is that the cost-cutting potential of insurance deals may be convincing, but it is not enough to justify hostile bid premiums. Friendly mergers are far more likely. And such deals are always tricky; management rivalries and valuation disagreements too often get in the way. Investors gamble on the likely outcome at their peril. Even so, the market's latest

enthusiasm - a merger involving - looks compelling. The reason is

simple: BAT is under more pressure than most insurers to do something about its share price performance. However, investors should take two aspects of the latest speculation with a pinch of salt.

pim expected

First, it would be odd indeed if BAT were to pool all its insurance interests with the same partner. Certainly Farmers, the US busine is unlikely to suit the same partner as BAT's UK businesses, Eagle Star and Allied Dunbar. But the really curious notion is that BAT would keep control of any merged insur-ance business, rather than spinning its share off. This would mean creating a yet bigger tobacco and insurance conglomerate - the last thing investors need.

UK brewing

The referral of Bass's proposed acquisition of Carisberg-Tetley to the UK's Monopolies and Mergers Commission is slightly puzzling. The obvious time for reviewing conlast year when Scottish & Newcastle acquired Courage. Moreover, the government appears concerned by a trend that appears inevitable; namely consolidation in a brewing industry that is offering pathetic returns on capital.

That said, the industry - spart from the deal's participants - will be delighted with this decision. Bass's hig competitors will be hop-ing that either Bass is forced into punitive concessions before being allowed to expand a brewing oligop oly or that Carisberg-Tetley is bob

comes. The MMC has been obsessed with horizontal integration between brewers and tied pubs. Bass may have to sell over 1,000 tied pube. and possibly brands as well, in exchange for approval. Alternatively, if the deal is blocked, Carisberg-Tetley will limp on with shrinking morale and declining

At least the downside for Bass looks limited. If the deal collapses it would lose £40m (\$68m) but prob ably a once-mighty competitor s well. The real victim would be Carlsberg. Under an option agreement, the Danish company would end up with 85 per cent of a brewer. which would require intensive management surgery just to survive.

FT WEATHER GUIDE

Europe today

Most of the continent will remain cloudy and cold. Maximum temperatures will be around freezing as easterlies winds confinue.

The UK will be milder but most

regions will also be cloudy.

A low pressure area across the western Mediterranean will bring rain across italy, south-eastem France and the western regions of the former Yugoslavia. Further east, it will remain dry, especially in western Turkey which will have sunny periods. Spain will have some sunny spells but Portugal will turn cloudy with rain spreading from the weet.

Five-day forecast

South-western Europe and the central Meditertanean will continue unsettled with outbreaks

A mass of cold air across northern Europe will steadily move south, keeping most of the continent cloudy and cold, By the end of the week, it will be wet.

\$431m expected in Telecel sale

The heavily oversubscribed initial public offer of Telecel, Portugal's leading mobile phone oper ator, is expected to raise Es66.85bn (\$431.3m) in the country's most successful global offering to date. Demand was over 17 times higher than the number of shares available to international investors in the float of 35.6 per cent of one of Europe's fastest-growing cellular phone opera-

Swiss Re in \$383m acquisition Swiss Re, the world's second-largest insurance company, has made its second big acquisition in less than six months with the SFr500m (\$383m) purchase of Unione Italiana di Riassicurazione (Uniorias), Italy's biggest reinsurer. Page 18

Southwest downgrades forecasts Southwest Airlines, the most successful of the low-cost US carriers, warned that fourth-quarter profits would be "substantially below" the previous year's record level in spite of a big increase in passenger numbers. The company's shares fell 75 cents to \$24 in early trading as analysts downgraded their profit forecasts.

Hayes to acquire 77% of Lemmerz Hayes Wheels International, the world's largest wheel supplier, has agreed to acquire a 77 per man family-held company. The \$240m cash and stock offer is the latest in a spate of trans actions as the car components industry consoli-

Carolo down 20% after steel collapse Shares in Carclo Engineering Group fell by almost 20 per cent after the specialist steel and wire manufacturer issued a gloomy profits warning following "a collapse" in stainless steel prices. The company cautioned against expectations of a rebound in stainless steel by saying prices had failed to pick up after falling 40 per cent in the first half. Page 24

Bass, the UK drinks and leisure group, said it was seeking to dispose of its company-owned Holiday Inns in North America. Analysts estimated it could receive up to \$500m from the sale, which is being negotiated with Bristol Hotal Company of Dallas. Up to 81 hotals could be included in the deal, totalling 15,000-17,500 rooms. But they do not include Crowne Plazas

Bass may gain \$500m from hotels sale

or Holiday Inn Expresses. Page 25

Hot' Tag Heuer makes investors sweat

William Hall reports on the fall from stock market grace of the Swiss watchmaker

ag Heuer sports watches are hot property. In Asia they are the second most counterfeited watch brand after Rolex and the company's sales have grown 28 per cent a year since a new management team took over in 1988. In less than a decade Tag Hener has emerged from obscurity to become one of the top five Swiss watch brands after Rolex, Swatch, Cartier and Omega.

However, its reputation with young consumers is not matched in the investment community. Since its initial public offering on the US and Swiss stock markets just over two months ago, the shares have dropped by more than a quarter against a background of rising world share prices. Tag Hener seems set to be remembered as one of the big-gest international stock market flops of 1996. The story of its IPO is a cautionary reminder of what happens when a "hot" new issue gets too hot - investors get burned. The SFr614m (\$465.1m) issue. Switzerland's biggest for more than a year, looked like a winner. Salomon Brothers and

ordinators and the lasue had a strong supporting cast led by Morgan Stanley and HSBC Investment Banking. The main Swiss private banks acted as Salomon Brothers' Mr Jeffrey Feiner, one of Wall Street's top retailing analysts, described Tag Heuer as one of the most compelling growth stories in the huxury goods sector. Its rating should be more

like that of a luxury goods

company, such as Gucci, or a

global brand like Coca-Cola,

rather than a Swiss watch-

SBC Warburg, the investment

banks, were joint global co-

Tag's sponsors were preaching to the converted. Shares in fashion house, had nearly trebled since their issue at \$22 in October 1995, and Saks, the New York department store. jumped 50 per cent on its first day of trading in May.

It was not hard to pigeonhole Tag Heuer as another "hot" new issue that investors could not afford to ignore. The offer was expended by more than a third and even though the price was set at SFr245, the top of the range, it was heavily over-subscribed. In the US the American depositary shares were issued at \$19.55.

were trading at \$13.75 and SFr177.5 respectively.

What went wrong? Thirdquarter sales were in line with expectations and Mr Ueli Trachal, finance director, says nothing has changed since the IPO to warrant the stock market's reaction.

he company and its advisers blame "technical problems" for the fall in the share price. US Tag Hener like a luxury goods stock with a price earnings multiple of more than 20.

Swiss investors preferred to rate it like SMH, the world's biggest watch company, which is trading on 14 times 1997

earnings. With liquidity split between the US and Swiss markets, the share price collapsed when US investors, supporting the higher rating, started to bail out.

Tag Heuer was particularly vulnerable since it came at the end of a string of "hot" luxury goods IPOs and fairly close to the year end. Riding on a "hot" new issue like Tag Heuer is an essy way for fund managers to boost their performance. They pay no commission going in and should gain a premium getting out.

Handlers of IPOs are aware of this problem and the key to a successful one is to make sure the bulk of it is placed in

The real blame rests with the company's advisers and its big shareholders, according to rival bankers. They say it was not ready to be brought to market. Its shareholders took a big chunk of equity out of the company in a recapitalisation less than a year ago and even though the IPO was designed

to repair the balance sheet, it

ings of SFr216m. These issues could have been overcome if Tag Heuer's backers had spent more time educating investors. But the IPO boom was in full swing. multiples on luxury goods stocks had more than doubled

rush to get it away before the market turned. The result was one of the fastest ever IPOs from start to finish, with little effort to curb market expectations that Tag Hener was going to be another Gucci.

In fact, Tag Heuer's growth cannot be compared with Gueci's. In the first nine months of this year its sales rose less than 10 per cent while Gucci's climbed by two thirds. Gucci is trading on a multiple of roughly half its growth rate, while Salomon argues that Tag Heuer should trade at a premium to its growth rate of 15 per cent plus. According to Bank Vontobel's 1997 estimates, it is still trading on 16 times earnings after the fall in its share price.

fund manager with VI Hambros, the UK investment bank, says the company's backers asked too high a price for the stock. This impression was compounded by the fact that when the issue was expanded, the bulk of the extra shares came from Doughty Hanson, a UK venture capitalist, which ended up selling more than four times as many shares as it had planned.

The fact that Mr Richard Hanson, chief operating officer of Doughty Hanson, is also Tag Heuer's chairman may have alarmed investors.

left Tag Heuer with negative Tag Heuer's management equity of SFr70m and borrowmust now try to repair the company's battered stock market image. Existing Investors with big losses have to be pany, while would-be investors need reassuring that the fall in the share price does not mean there is something wrong with

companies left in cold after poor results

By David Owen in Paris Heavy early snow in the Alps

promises a bumper skiing sea-son this winter, but two of Europe's leading winter sports companies will be struggling to take advantage of it.

Skis Rossignol, the French ski maker, yesterday reported a near 14 per cent decline in first-half net profits from FFr129m. The company also warned its results for the year to end-March 1997 would come in below the FFr115.7m reported-last time.

week after rival Salomon, the world's largest manufacturer of ski bindings, said it expec-ted its 1996-97 results excluding exceptional items to be about the same as last year's

Yesterday's announcement sent Rossignol shares down FFr2.90, or more than 2 per cent, to FFr137 on the Paris stock market. Salomon shares rose FFr1.80, or 0.4 per cent, to FFr444.80, but they have fallen markedly since peaking at close to FFr490 in October. Both companies have been hit by diversification costs.

heavily this year in a product geared towards the snowboarding, parabolic ski and rollerskating markets. The company expects to launch a Rossignol roller skate in 1997. But it said that although the world market for winter sports equipment was declin-ing, it managed to "reinforce" both its sales and market shares in all product lines.

Salomon's diversification costs are expected to increase to some PFr80m this year from FFr15m in 1995-96. In its first half it experienced a 20 per cent decline in the Japanese alpine skiing market and a strong performance from its Taylor Made golf clubs. Like Rossignol, Salomon is planning to launch a new roller skate - at the start of 1998. First-half sales at Salomor

registered a strong 18 per cent increase from FF1.71m in the six months to end-September 1995 to FFr2.02hn this time. Rossignol sales advanced per cent from FFr1.14bm in the first six months of 1995-96

to FFr1.21bn in the most

Leading ski Monsanto to split off chemicals division Monsanto, the US chemicals of its global workforce, would and biotechnology company,

yesterday announced plans to split off its chemicals division to shareholders and said it was setting axide \$400m to \$600m to cover associated charges. After the split, Monsanto will become a life-sciences comfocus on the agriculture, food and healthcare markets.

Monsanto said the demerger into two publicly traded companies was intended to

be laid off as a result of the demerger. The job cuts will

The chemicals division, as a

stand-alone company, will have about \$3bn in revenues. It makes and markets a range pany with \$5bn in sales and a of speciality chemicals, including carpet fibres and window coatings. A name for the new company was not announced.

The company is seeking approval from tax authorities unlock significant value in for a tax-free separation of the

shareholder approval. The company said it hopes to accomplish the split by the end of 1997. In the meantime, the two organisations will operate separately within Monsanto, beginning early next year.

Monsanto's decision was influenced by the diverging of its two main businesses. While the chemicals businesses are quite profitable, the commodity nature of their products leave growth potential for the division far below Monsanto's high-technology life-sciences

distinct businesses with critical differences in their markets, products, research and investment needs and plans for growth," said Mr Robert Shaptro, Monsanto's chairman. "After careful consideration, we're convinced these businesses must operate separately to meet their maximum poten-

Monsanto's shares have ralpast 12 months on the strength of the company's high-

remaining busine food products, including the artificial sweetener brands Nutrasweet, Equal and Canderel, and the pharmaceutical company Searle. The company's stock was

down 1/2 cent at \$40% per share in early trading yesterday. Monsanto did not give any details of debt distribution between the two new compa lied to record levels during the nies, but said it expects the capital structure of the chemical company to result in an technology agriculture prod-investment-grade credit rating ucts, including genetically from the first day of operation.

Fiat shares fall as Rome rejects idea of sales incentives

By Halg Simonian in London and John Simbles in Milan

and industrial group, fell by Mr Romano Prodi, the prime minister, disappointed the company's hopes for a special incentive programme to stimulate car buying and boost sluggish demand.

Mr Prodi, speaking in at the Bologna motor show at the weekend, acknowledged the ering ways to boost the car market. However, he said it would be wrong "to put the laws of the market under tension".

Mr Prodi is thought to have been influenced by developments in France, where two car incentive programmes stimulated sales by domestic carmakers, but also attracted unprecedented amounts of imports.

The French scheme has also been criticised for unbalancing the market. Demand for cars fell by 21 per cent in November - the first month to feel the full effects of the programme which ended in September. Mr Prodi said: "The French

government now has the worry of 60,000 potentially unemployed workers in the car

lower sales and cut costs, Renault and Peugeot-Citroën, the two leading French carmakers, recently asked the government for help in reducing jobs through early retirement

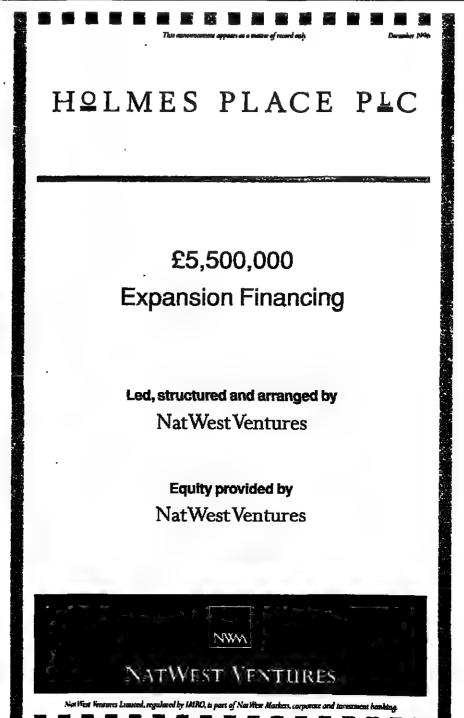

to boost consumer confidence

others have toyed with the idea. A Spanish programme helped boost the market during the recession and provide work at the country's car factories, which are all owned by foreign manufacturers. Smaller programmes in Ireland and Denmark have also been judged broadly successful,

Mr Prodi's comments triggered a sharp reaction from leading industrialists. Mr Cesare Romiti, Fiat's

chairman, said the government needed to take action to boost consumer confidence. "It is necessary to relaunch the economy, stem the worrying So far, four European coun-tries have introduced incentive and stop the fall in consumer

EUROPEAN NEWS DIGEST

Flughafen Wien sees downturn

Flughafen Wien, the Vienna airport authority, warned yesterday it expected net profits to fall about 10 per cent this year because of high depreciation charges for its recent expansion and additional costs during the harsh

The company forecast 1996 profits of about Sch600m (\$55.4m) after record earnings of Sch673m in 1995. Revenue rose only 4 per cent this year, while costs jumped 8 per cent. Flughafen's share price climbed Sch10 to Sch522, while the market rose 1.26 per cent. Expectations of lower earnings and a looming capital increase to finance further construction had caused the stock to lose half its value this year.

But the airport authority said it would not need to raise fresh capital until 2000, even though annual traffic growth is expected to stay at or above 8 per cent in the coming years. The next physical expansion of the airport facilities was planned for 1999, it said. Operating profit margins should climb from 18 per cent in 1996 to 25 per cent in 2000, and the return on capital employed should rise from 12.5 per cent to 15 per cent.

Czech bank sale approved

The Czech National Bank, or central bank, has approved the sale of Interbanka, a small commercial bank, to Bayerische Landesbank Girozentrale of Germany and Kulkereskedelmi, a Hungarian bank controlled by BLG. It is the first move in what is expected to be a hectic period of consolidation in the Czech banking sector.

BLG is to take a 55 per cent stake in Interbanka, one of the few small-tier Czech banks not to experience severe loan-loss problems. Kulkereskedelmi will hold the other 45 per cent. No terms were disclosed.

Philips to sell US plant

Philips, the Dutch electronics group, is to sell its US television plant to local suppliers, in an outsourcing arrangement which forms part of the FI 800m (\$463m) restructuring of its Sound & Vision unit. The facility, in Greeneville, Tennessee, produces more than 1m sets a year with 1,800 employees. Its assets are being bought by GC Capital, a vehicle for Mr George Taylor and Mr Charles White, who supply wooden cabinets for units produced at the site. Gordon Cramb, Amsterdan

Bilfinger downbeat on profits

Bildinger + Berger, the German construction company, said new orders in the 10 months to October had risen from DM8.1bn to DM8.3bn (\$5.4bn). The order backlog totalled more than DM10bn at the end of October, compared with DM9.5bn last year. Earnings would not reach last year's levels because of difficult market conditions in Germany. The company posted a net profit of DM105m in 1995.

AFX News, Mannheim

Oerlikon-Buehrle sales slip

Osriikon-Bushrle, the Swiss weapons and engineering group, said sales in the 10 months to October fell 1.9 per cent to SFr2.9bn (\$2.2bn). Orders fell 2.7 per cent to SFr2.8bn following the sale of several companies, notably Pfeiffer. It said operating results and net income improved significantly. The company expected 1996 sales of SFr3.7bn, with the full-year operating results significantly better" than last year's SFr139m.

FT/S&P World Indices

The committee which oversees the FT/S&P-Actuaries World Indices announced last night it is to change the rules governing the weighting of privatisation stocks in the indices. Until now, if more than 25 per cent of a company's issued share capital is made available to investors, then the whole share capital has been included in the indices. But the committee has decided that this can create unrealistic company weights, which are unattainable by investors.

In future, when governments make available less than 50 per cent of the shares, only the "free float" shares available to the public will be included in the indices. Above 50 per cent, the full issued share capital will be included. The rule will not apply to existing constituents, apart from Deutsche Telekom and Eni, which were recently included in the indices at their free float weightings, respectively 25.35 per cent and 30.8 per cent.

Comments and press releases about international companies coverage can be sent by e-mail to international.companies@fl.com.

Portuguese phone IPO heavily oversubscribed

ing to date.

A heavily oversubscribed initial public offer of Telecel. Portugal's end of the pre-determined range of leading mobile phone operator, was expected to raise Es66.85bn (\$429.6m) vesterday in the country's most successful global offer-

Demand was more than 17 times institutional investors in the sale of 35.6 per cent of one of Europe's broker. fastest-growing cellular phone

operators, analysts said. The offering, Portogal's biggest Portugal's Banco Essi, are widely grouped together in the holding

at Es7,950 a share, valuing Telecel at Es170.9bm. This was at the top Es6.900 to Es6.100.

Analysts expect the price to rise further when trading begins today in Lisbon, London and New York. "Many institutions, who were prepared to pay up to Ess 100 a share. the number of shares on offer to will be seeking to increase their allocations," said a London-based

The global co-ordinators, Leh-

increase the offering by up to 10 per cent.

This would increase the sale from 35.6 to 39.1 per cent of the company and increase the amount raised from the sale from Rs60.77bn

AirTouch, the US mobile phone company, increased its stake in Telecel from about 38.8 to 51 per cent through the offering. The selling shareholders, Portugal's

company Telepri, reduced their holding from 62.3 to 10 per cent. Demand was strongest from international institutions, who

were offered about two-thirds of the shares. The Portuguese institutional and retail tranches were both about four times oversubscribed, analysis said.

"Demand was on the same level as the recent record-breaking offering of Portugal Telecom, even though the share price was very Espírito Santo financial group and high for the Portuguese market man Brothers, SBC Warburg and the cork company Amorim, and there were no discounts for small investors."

had been valued at a 1997 p/e ratio of about 14.2 at the lower end of the price range and 16.7 at the upper limit, on a 1997 earnings per share forecast of Es485, up from an estimated Es324 this year.

This is seen as attractive for a profitable, high-growth company in a young market where there is only one other competitor. Analysts say it compares favourably with the outlook for companies in markets such as the UK where mobile operators are fighting flercely for market share.

AMERICAS NEWS DIGEST

Turner 'derailed Fox News deal'

Mr Ted Turner, founder of CNN, detailed negotiations between Mr Gerald Levin, Time Warner chief executive. and Mr Rupert Murdoch, News Corporation head, on the carriage of Fox News on Manhattan Cable, according to a report in tomorrow's edition of Vanity Fair magazine. Carriage on Time Warner's showcase Manhattan system was vital to a successful launch of Mr Murdoch's Fox News Channel. When Fox was denied access - after Mr Murdoch believed be had a "done deal" with Mr Levin - it led to one of the biggest rows in the US media for years. Mr Turner called Mr Murdoch a "scumbag", while Mr

Murdoch's New York Post pulled CNN from its television The January issue of Vanity Fair says that although

Time Warner was required to carry at least one competing news network on Manhattan Cable, Mr Levin was planning to carry two - the new Microsoft channel, MSNBC, and Fox News. However, Mr Turner argued that the long-term future of

CNN would be threatened by such a move, which would also delay the roll-out of Turner Classic Movies and the Cartoon Network. "All while you shoot CNN in the figurative dick," Mr Turner is reported as saying to Mr

Mr Levin had allowed Mr Murdoch and MSNBC to believe they already had deals with Time Warner, but in the light of Mr Turner's opposition, Mr Levin then told Mr Murdoch one month before the launch of Fox News that Time Warner had chosen MSNBC instead.

Microsoft to raise R&D spend

Microsoft said yesterday it would increase spending on basic research 300 per cent next year and boost its Microsoft Research unit from about 170 computer research scientists to as many as 500.

The US software group plans to spend about \$330m over the next five years. It said the research would not be tied to specific commercial products, but would aim to provide better understanding of how people use computers and allow researchers to explore a wide range of different

Microsoft said it would share some of the results of its efforts with researchers at other firms and would collaborate with them on various projects. The move runs counter to a general trend under which many large corporations are cutting basic research in order to focus on commercial product development. Microsoft said it would spend \$2.1bn in fiscal 1997 on the development of commercial products.

MCA becomes Universal

MCA, the entertainment arm of Canadian drinks group Seagram, has changed its name to Universal Studios. The adoption of an updated version of the 81-year-old globe logo as the concern's trademark marks a further step in the consolidation of its diversified film, television, music, video and theme park interests.

Although certain well-established sub-brands will remain, each business sector - Universal Music, for example - will in future be immediately identifiable as

part of the group, officials said.

The change follows 18 months of internal restructuring since Sesgram bought control of MCA from Matsushita of Japan, according to Mr Ron Mayer, president and chief operating officer. "By presenting a cohesive identity we maximise the strengths of our assets under one global brand, which will enrich our marketing efforts across all our businesses," he added. MCA, formerly Music Corporation of America, was set up in the 1940s as a booking agent for hig bands.

Two's a crowd: analysts say one national carrier is enough

Not everyone shares Mr Hargrove's proposed solution, but few disagree with his analysis of the problem. According to a Montrealbased analyst, "there's not enough market to sustain two national airlines".

Over the past seven years, Ottawa has lifted nearly all route and pricing constraints on domestic airlines. An "open-skies" agreement with the US, signed in 1995, has also cleared the way for head-to-head competition between US and Canadian

The full impact of the pact will be felt in February 1998, when remaining curbs on US airline services to Canada's three busiest airports -Toronto, Vancouver and Montreal - will be phased

ir Canada, the bigger of the two national Carriers, adjusted relatively smoothly to deregulation. It has responded aggressively to cut-price fares and new services offered by rivals.

its shrewdest move was to open an array of crossborder routes, which minimised competition from the powerful US airlines by avoiding their "hubs" and concentrating on second-tier cent and selling at least part stinations, such as Minneapolis, Kansas City and Raleigh-Durham. Many travellers to these cities are busi-

ness people paying full fares. The Montreal-based carrier notched up record quarterly earnings - excluding onetime items - of C\$149m (US\$109.5m) in the third quarter to September 30. Domestic services contributed only 45 per cent of revenues were flat year-on-year, cross-border business grew 38 per cent.

Canadian Airlines entered the deregulation era with significant handicans. It has never overcome the burdens imposed by its 1989 takeover of Wardair, a buccaneering charter airline. A transfusion of C\$246m in equity

Ontario and Quebec. If the latest restructuring succeeds, Canadian is expected to evolve into a smaller carrier, serving mainly west em North America and Asia from its Vancouver hub. Air Canada could then justifiably declare itself the coun-

try's only national sirling. • Canadian Airlines International yesterday asked European and Japanese banks and aircraft lessors to accept a three to six-month delay in loan and lease payments so that it could complete its financial restructuring, writes Robert Gibbens to Montreal. Creditors are owed more than C\$2bn. CAI tising campaign to re-assure

Hayes to acquire 77% of Lemmerz

By Tracy Corrigan In New York

Hayes Wheels International, the world's largest wheel supplier has agreed to acquire a 77 per cent majoring, a German family-held company. The \$240m cash and stock offer is the latest the car components industry

"Car manufacturers are looking for global suppliers," said Mr Ron Cocuz, chairman and chief executive of Hayes. "It makes a lot of sense to combine our businesses to deliver additional value for customers and shareholders."

The new company, under the name of Hayes Lemmerz International, will have a global market share of 20 per cent, compared with Hayes' current 14 per cent share.

"This move aligns our strategy with that of our customers," said Mr Cocuz. Hayes wants to offer the same product anywhere in world at local market

The merging of the two businesses is expected to produce at least \$20m in annual cost savings, derived from lower labour and material costs, Mr Cocuz said. The deal could increase earnings by 25 per cent, if buy-out partnership, owns 48

Lemmers has already moved some operations out of Germany to Spain and Turkey, and that will be accelerated by a move into the Czech Republic following the acquisition. No plants are expected to close in Germany as a result, but there will be job losses as a result of greater automation. Mr Cocuz declined to estimate how many jobs would be lost in Germany,

The shift to the Czech Republic will also give the company access to lower cost steel, accounting for about \$4m-\$5m of the total cost savings, Mr Cocuz said.

The Hayes offer consists of \$130m in stock and \$110m in cash. If Hayes acquired the remaining 23 per cent of the company, the whole company would be valued at \$310m, plus the assumption of \$55m in net debt. The overall debt to equity ratio of Hayes is unchanged at about two to one.

Lemmerz, which is not publicly quoted, has annual sales of about \$450m and earnings before interest, tax, depreciation and amortisation of \$65m. Hayes, which had pro forma sales of \$968m last year, merged with Motor Wheels Corp in July, undergoing a leveraged debt and equity recapitalisation. South Korea has decided postpone the overser issuance of global depositry receipts by two banks until next year because of poo conditions in the domestic stock market. Boram Baik will issue a \$70m GDR in February, while Korea Lng-Term Credit Bank will launch a \$200m GDR dung the second quarter of 1997. Korean banks were thi year given permission for the

first time to launch oversas issues to improve their capital bases before the baking sector opens further to foreign competition. However, a slump in the Seoul stock market has discouraged reign investors. Korea Long-Term Credit Bank as forced to cancel a recent issue when overseas invetors demanded a discount, while Cho Hung Bank ha to reduce its GDR from \$250m

The finance ministry sid it would limit the number of bank GDRs next year. Beides Boram and Korea Long-Term Credit Bank, key include a \$150m issue by Commercial Bank of Kora in January and a \$150m issue by Hanil Bank in March. John Burton, Seou.

Coles Myer chief steps down

Coles Myer, Australia's begest retailer, which has been under fire from shareholders over its poor operating performance, yesterday snounced that Mr Peter Bartels, its chief executive, wouldeave the company at the end of the year. He will be replied by Mr Dennis Eck, chief operating officer, who joied Coles in 1994 from the Vons upermarket group in thUS.

Mr Bartels will also sto down as a director of the retail group. The changes follor months of speculation about the future of Mr Bartels, the earned A\$2.8m (US\$2.23m) last year, making him on of Australia's best-paid executives. The remuneration was attacked at Coles' recent annual meeting b shareholders and employe not least because it was aid in a year in which profits at the retailer fell by one-tird to A\$280.4m.

Sega and Hyundai in tie-up

Sega, the Japanese make of video game and arcade machines, is tying up will Hyundai, the Korean conglomerate, to sell arade amusements in Korea. The new company, Hyundai lega Entertainment, will be 75 per cent-owned by Hyuriai's trading company arm, with the remaining shares toxe held by Sega. It will use one of the Hyundai group's loci plants in Korea to manufacture games machines using pris imported from Japan.

The deal follows Koren deregulation of games areads operation. Sega is alread expanding its areads businesses on the back of buoyancim the sale of commercial games machines. This year, the company has had success with arcade machines which nable users to print out photographs in sticker from. Michigo Nakamoto, Tokyo

Johnson Electric upbeat

Johnson Electric, the Hong Europe electronics company, said lower raw materials price and a weaker yen would increase operating margins if the current year. Net profits for the first six month rose 38 per cent to HK\$211.3m (US\$27.3m) on sals up 24 per cent at HK\$1.41bn. Sales to Europe combed 37 per cent. The company reported robust defand for power tools, which rose 30 per cent, while automitive component sales were 27 per cent higher. AFX-Asia, Hong Kong

Billionaire barons see shiny future in Bendigo

New mining techniques have attracted big-hitting investors to an old Australian goldfield

hen Mr Kerry a clue to what the billion-Packer, reputed to aires see in Bendigo. be Australia's richest man, and Sir James Gold-bought licences to 90 sq kms smith, reputed to be one of of the old Bendigo goldfield, the richest in the world, get from which more than 20m together for a deal, one troy ounces of gold was proexpects it to be big - in the same league, perhaps, as the £13bn (\$21.34bn) they bid unsuccessfully for BAT, the UK tobacco to insurance conglomerate, seven years

So what is it about Bendigo Mining, a small gold exploration company - market value about A\$30m (US\$23.9m) - operating in no efficient ventilation sys-Victoria, Australia, that war-tem - and the water that rants their interest?

Each of the dollar billionaires owns nearly 10 per cent of Bendigo, but they are not the only big-hitters involved. Mr Peter Philip, previously chief executive of Newmont, the biggest US gold mining group, is chairman.

Bendigo are the responsibility of Mr Doug Buerger, the managing director. He was general manager at Dominion Mining, one of Australia's large mining groups, before being invited by Mr Philip to take the job at Ben-

Both Mr Buerger and Mr Philip are South Africans -

The little company has duced between 1851 and 1954. The Bendigo field remains Australia's second-biggest gold producer - only the Golden Mile at Kalgoorlie in Western Australia has a bigger output.

The old-time miners could not go very deep. Below 650 metres they were usually defeated by heat - they had tem - and the water that poured in. Now the billionaires are hoping that the oldtimers left a wealth of gold behind and that modern South African mining techniques can get it out at a

During the field's heyday in the 1870s, more than 1,300 Day-to-day operations at mines were working the Bendigo reefs. Their production peaked between 1872 and 1876 at more than 360,000 ounces a year, even using 19th-century technol-

to establish its first such outlet in Europe with Zimex, a business aircraft maintenance joint venture at Zurich Airport. The aviation Mr Quarta said the division is expected to have profits of £50m in BBA's enlarged division would be annual sales of about £400m

LEX COMMENT

Christmas shopping

If you believe what you read and hear, Santa has arrived early. All the talk arrived early. All the talk General Retailers relative to All-State (FTSE indicate) fic jams in the car park. 7110-There is evidence both that shops are attracting new customers, and that the average spend is sig-nificantly higher than last year. Is this then the signal to pile into retail stocks? Closer examination suggests caution would be in order; the news from the high street is by no means uniformly cheery. Sales signs in win-

dows are a sign that all is not well. And the statistics back up the anecdotal impression: today's figures from the British Retail Consortium show that the rate of growth in retail sales is clearly slowing. Given this underlying picture, it is not surprising retail stocks have, in general, underperformed the market over the past six months, with the sector premium falling from roughly 25 per cent to about 20 per cent. The slowing sales trend has also been aggravated by the added concern that interest rates look to be on a rising trajectory. Ironically, the best chance of a steady performance for the sector probably lies in precisely this trend of solid, low inflationary growth. Christmas may drive share prices higher in the short term, but any rally is sure to founder soon after on the rocks of higher

Roberto Quarta: commitment to building aviation division

COMPANIES AND FINANCE: UK

Mr Richard Branson's FFr630m (\$119.3m) capital Virgin Express regional air- injection. line said it would not bid for Air Liberté, the ailing French regional carrier. The

decision clears the way for British Airways to take over the airline. Mr Jonathan Ornstein, Virgin Express's chief executive officer, said: "We do not have the kind of willingness to lose as much money

as I think whoever buys this company will lose." British Airways, in partnership with French Banque Rivaud, has been the leading contender in the race to acquire Air Liberté since

Mr Ornstein had said earlier he planned to top the BA bid, but Virgin Express never submitted any bid. "There are other opportunities we are looking at in France," he said.

Air Liberté, founded in 1988, lost FFr650m in the first nine months of 1996 because of a fare war and poor passenger numbers at the airline in the run-up to full liberalisation of French airspace.

BA and Rivand's offer has to be approved by the creditors of Air Liberté, which October to give Air Liberté a tion.

Air Liberté bid from Microvitec

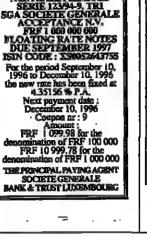

By Paul Taylor

Microvitec issued its second profit warning in four months yesterday sending shares in the computer software and networking group low of 20%p down 7%p on and did so again yesterday. the day.

The company, which warned in August that fullyear profits would be hit by difficulties at its Canadian arm and the collapse of a business partner, said yesbreak even due to the slower

its networking business which until recently had been one of the group's star performers. Analysts, who began the year expecting full-year profits of about tumbling to a new 12-month fam, had cut their estimates

Microvitec reported flat pre-tax profits of £1.61m on turnover up 27 per cent to 233.8m in the first half in spite of lower sales at Sil-Com, the Canadian networking product business. It was terday that second-half hit by destocking by large results were "unlikely to North American computer and networking companies than expected transition to and a move away from the and market acceptance of type of modules traditionally supplied by the group.

Bass to make US disposals

By Roderick Oram, Consumer Industries Editor

Bass said yesterday that it was seeking to dispose of its company-owned and managed Holiday Ims in North

Analysts estimated that it could receive up to \$500m from the sale, which is being negotiated with Bristol Hotel Company of Dallas. Up to 81 hotels could be included in the deal, totalling 15,000-17,500 rooms. But none are Crowne Plazas

or Holiday Inn Expresses. Bass might use the pro-ceeds to buy small hotel chains in Europe, the Middle East or Africa to convert to Holiday luns, where it has so far made slow progress in developing the brand.

Unlike the US, where many hotel owners are keen to pay for a strong franchise, the supply of poten-tial franchisees outside the US is more limited.

Company-owned and managed hotels in North America contributed £96m (\$157m) to Base's operating profits in the year to September. The figure included profits from hotels owned by others which Holiday Inn managed so it was not clear how large a contribution

Bass's own hotels made. Bristol is 57 per cent owned by United/Harvey Holdings LP, a vehicle for selling limited partnerships to private investors. It has 39 hotels in the southern US of which 13 are franchised

CONTRACTS & TENDERS

The Government of the Republic of Gabon, within the context of its economic

reform programme and in accordance with the Law on Privatisation of

February 13th, 1996, has decided to confer the running of the "Transgabonals"

railway to a private operator by means of a concession agreement, which will

have a minimum duration of 20 years. The concession company will operate

rail transport services for wood products, various other types of freight and

passenger services, and will be responsible for the maintenance and

Inaugurated in December 1986, the Transgabonais railway is a single-line

system with a total length of about 650 kilometers. The railway annually

transports approximately one million tons of logs, 175,000 passengers and

200,000 tons of various other types of freight. In addition, the Transgabonais

railway receives a track usage fee from the country's main manganese mining

company which operates its own transport service over the rail system with its

own equipment for the shipment of roughly one and one-half million tons of

The Government is looking for companies or consortia which have relevant

technical expertise, have commercial experience in the rail transport sector,

have expertise in concessions, and which have the financial resources to operate the railway. Interested parties for this railway concession are invited to

express their interest in writing, either in French or English, to one of the

addresses below, and to submit sufficient, relevant documentation to

demonstrate their qualifications for operating the railway concession.

Mercer Management Consulting and the Banque Nationale de Paris have been

appointed by the Government of the Republic of Gabon to advise on the

STIM SEED

....

. days grandfill

- 1949 42 MA

A greater number of Japanese, UK and European fund managers plan to reduce holdings of domestic bonds than those planning to increase them, according to Merrill Lynch's latest monthly international survey. In the December survey, nearly one-quarter of Japanese fund managers said they were intending to reduce their institutions' holdings in Japanese government bonds, reflecting the continued expectation that interest rates and bond yields will remain low. In contrast, one-third of managers want to buy bonds outside of Japan, with US

Treasuries being prefered.

The survey of 232 institutions, which handle funds totalling \$4,700bn, was completed before last week's comments by Mr Alan Greenspan, chairman of the Federal Reserve, led to sharp falls in international bond and equities markets. However, a balance of Japanese managers were already bearish over prospects for the US and UK equity markets in the next 12 months. And for the first time in over a year, Japanese managers are more likely to buy than to sell their domestic equities.

In the UK, managers have become more inclined to sell gilts, while investment in UK property is heavily favoured. Merrill Lynch notes: "Bears of UK gilts outnumber bulls by 13 per cent, and following the gilt

rally in November managers have turned net sellers." Continental European managers have also become net sellers of bonds inside and outside Europe. Over 90 per cent of managers expect economic activity in mainland Europe to be stronger in 1997 when compared with 1996. US managers remain very bullish about European equity markets, but are more bearish on the outlook for their domestic equities by a margin of 12 per cent.

Chicago exchanges add jobs

Chicago's four futures and securities exchanges have made the city a primary location for financial services employment, accounting directly for 50,000 jobs, according to a new study. The exchanges generate an additional 100,000 jobs when non-financial businesses that benefit from trading are taken into account, says the report from the Risk Management Center of Chicago and the

Commercial Club of Chicago.

The study also found job growth for financial services was 13.9 per cent over the past decade, nearly double the rate of job-generation for the city as a whole. While banking employment is down nationwide, it continues to grow in Chicago. The report is an update of a study of the economic impact of the financial industry on the local economy, last issued in 1987. The study found that the exchanges are net exporters, with their products and services overwhelmingly purchased by corporations and institutions outside of the city.

COMMODITIES AND AGRICULTURE

supply hit oil Mexico's peasant coffee farmers are better known for social revolution than inforfuture prices

MARKETS REPORT By Peter John and Kenneth Gooding

Oil futures traded lower yesterday as the market fretted about additional supply in the wake of Iraq's oil-for-

food deal with the UN. Mr Boutros Boutros-Ghali, UN secretary-general, gave final approval for Iraq's partial return to the world oil stage. Iran was also already pushing for the quota to be doubled.

January Brent crude was quoted as low as \$23.85 in late afternoon trading in London, down some 70 cents on Friday's close and below a \$24 support level. By 6pm, January stocks had rallied to \$23.92. Heating oil and gasoline were down by between

\$1.00 and \$1.25 a gallon. Several analysts were sceptical about the effect on prices of Iraq's \$2bn deal which will add between 500,000 and 600,000 barrels a from Friday. Dealers said risday at current prices. They pointed out that while technically Iraq could begin to export today, it was unlikely to be moving supplies for several days because of tech-

They also pointed out that a boost to supply from Iraq would be offset by weather related surges in demand at a time when stocks are low. Also, there was some relief from the ending of a nine-

nical problems.

day strike at Elf Aquitaine's Donges refinery in western Donges refinery in western services group, says in his France, and concerns about latest report: "There are a possible strike in Colombia faded away.

Tin prices dropped to their lowest level for 1½ years on the London Metal Exchange. Selling by the Chinese ahead of the year-end was one likely reason for the fall, which started to become

COMMODITIES PRICES

apparent on Friday, according to Mr William Adams, analyst at Rudolf Wolff, the Noranda subsidiary.

"Low tin prices have deterred sales for most of the year but the market's failure to pick up sufficiently to absorb export sales may now be leading to distress selling in order for the Chinese to make up their export quotas." he suggested.

China needs to meet this year's quota, fixed by agreement with other international producers, to be sure of being awarded a similar tonnage in 1997.

Tin for delivery in three months dropped to \$5.810 a tonne at one point before recovering slightly in late trading to \$5,840, down \$180 from Friday's close.

In relatively thin trading, lead prices on the LME also weakened, touching their lowest for 13 months. After falling to \$666 a tonne, lead closed at \$666.50, down \$13.50 ing LME stocks were weighing lead down.

On the London bullion market platinum prices sank to a three-year low of \$368 a troy onnce amid rumours that investment funds were selling and so were the Russians, who were intent on filling export quotes for this London at \$368.30, down \$1.45 an ounce from Friday.

Mr Ted Arnold, analyst at the Merrill Lynch financial more than ample aboveground stocks of platinum for consumers at present. Production is rising steadily in South Africa, not falling away. Scrap recovery continues to go strongly ahead and Russian sales are unlikely to

Worries over High-tech help for coffee growers

mation revolution. But buffeted by see-saw prices, they are joining the electronic age in the hope that better knowledge of the market will raise their incomes and protect them against unscrupulous local middle men.

A huge satellite dish adorning the roof of the coffee growers' co-operative on the edge of the small town of Comitan, in the southern state of Chiapas, bears witness to how far the information revolution has spread into this traditionally remote and backward region.

The dish's high-technology presence contrasts starkly with the surrounding poverty and illiteracy which have proved fertile ground for the Zapatista guerrillas. The co-operative, called Uncafesur, has a member-

lies, from whom it buys coffee. It prepares the coffee for export and sells it to Europe and North America. One of the co-operative's biggest customers is the British company CafeDirect, which operates on the "fair trade" principle of cutting out local and international

ship of more than 1.300 fami-

the growers. But ensuring that coffee growers actually receive a fair deal depends on the quality of market informa-

middle men and returning

the saving, or premium, to

Uncafesur and is married to expert, the bulletin concen-

Arturo Jimenez Hernandez, coffee grower and co-operative leader, inspects the crop

rier to getting a good price

The satellite dish installed last year pulls down signals from a company called Best Investment, in Guatemala City. With software supplied by Best Investment, Uncafesur can follow real-time New York coffee prices.

This immediate informstion is supplemented by a fortnightly market report faxed to Uncafesur by Twin Trading, a fair trade commodities dealer in London. which supplies Cafe Direct.

Ms Olga van der Valk, a Written by Mr Richard Dutch woman who works for Hide, Twin Trading's coffee

tion is the most serious bar- trends to provide a context stand what's out there," said for the sometimes bewildering figures jumping across Uncafesur's screen. Mr Hide, a former City coffee trader, tries to explain

the meaning of key figures

such as differentials - the variations between New York world prices and the local prices farmers receive. Reliable information is especially important for coffee producers. Coffee is one of the few main crops grown mainly by small farmers.

The end of price regulation under the International Coffee Agreement in 1990 left farmers exposed to wild mar-

Mr Hide. "With the basics of farming know-how, quality control and market information, coffee producers can be as sophisticated as other people in coffee trading." The Chiapas experience

bears out his judgment.

Armed with better information, farmers have begun to time sales more astutely. Instead of selling at the beginning of the harvest in November or December, when they are often desperate for cash, farmers are better able to bide their time.

Knowing that Uncafesur can find foreign buyers at habit of selling at the height of the harvest in February, when prices are low.

This year, for the first time, farmers did not want their coffee to be sold immediately after delivery to Uncafesur. Instead, they left instructions to sell when the market was good. Uncafesor's trading has

become a reference for the region. Mr Arturo Jimenez Hernandez, a Chiapas coffee farmer and co-operative leader, said: "We have raised awareness of prices. Producers often didn't know what their coffee was worth."

That was a serious deficiency for families whose precarious earnings of, perhaps, \$1,000 a year from coffee were much their most important source of cash. But there is still a long

way to go. Mr Jose Juarez Varela, a Uncafesur administrator, said: "Half our membership can't read or write. It takes half a day to explain anything to them."
The satellite dish not with-

standing, Chiapas remains an inaccessible region. A meeting with farmers in the remote mountain co-operative of Kulaktik had to be translated into Spanish from the pre-Columbian Tzeltal language spoken by the indigenous population.

One speaker, clad in the traditional pointed black hat and brightly coloured waistcoat, thanked his visitors for making the journey and said: "We couldn't come to where you come from or how to get there."

Ukraine sees fall in sugar production

By Matthew Kaminski

Ukraine's sugar production this year will be at least a fifth below 1995 levels, as the agriculture economy continues to stagnate.

The ex-Soviet Union's only the region's bread basket, expects sugar output of 28m connes in 1996, down from 3.5m tonnes last year. according to UkrTsukr, the state sugar concern.

A western sugar trading company suggests produc-2.6m tonnes, Ukrainian agricultural statistics tend to over-estimate output.

The fall in production and trade sanctions recently imposed by Russia, the biggest single foreign buyer, have already dampened Ukrainian sugar exports.

The statistics ministry this week said sugar exports in the first nine months of 1996 were 291,000 tonnes, less than half the 635,000 tonne registered last year.

。。正数**用电影**

and the second second

"For the sugar industry. this year is a catastrophe, They've even been quite lucky that the winter did not come so soon - it could have been worse," a Paris-based sugar trader soid.

The drop reflects lingering economic problems within the unreformed agricultural sector, where collective farms have only slowly been broken up, as well as a onemonth delay this year in planting sugar beet after a colder than usual winter.

Refineries' liquidity problems have prevented them from securing energy and beet supplies this year while the financially-strapped government in Kiev held back from handing out subsidies. Nearly half the refineries have not finished processing

LONDON STOCK EXCHANGE

Footsie recoups over half of Friday's loss

MARKETS REPORT

By Steve Thompson, UK Stock Market Editor

"The way the market closed today you would never have thought that the FTSE 100 was showing a 168 point fall only one trading session ago," mused an old market hand in London yes-

Closing at the day's best and easily recapturing the 4,000 level, the FTSE recouped 48.6 points of Friday's 88.2 loss, ending the day at 4.011.6.

BATs on the march

By Peter John and Lisa Wood

BAT Industries, the tobacco and financial services combine, was the best performing stock in the Footsie yesterday afternoon as the market put its money on some form of demerger.

The group's shares had started to rise last week on talk that a deal was being done between Commercial Union and BAT's financial arm, which includes Eagle Star and Allied Dunbar. There was also encouragement from a weighty recommendation published by Merrill Lynch.

Then, a press report that talks between CU and BAT were off calmed the speculation but weekend newspaper stories restored it. Analysis said yesterday that BAT has to do something with its financial services arm and, if CU is not interested, someone else will be.

the shares are far too cheap on fundamental grounds and only held back by concerns about US litigation. Yesterday, the stock recovered 25 to 476%p - more than making up for its losses on "frantic Friday", with the rise backed by respectable turnover of 7.9m shares. CU

after the market digested the of the majority of Carlsberg-Tetley to the Monopolies and Mergers Commission and an unexpected announcement by Bass of a possible hotels

Initially, the price had MMC announcement, with analysts suggesting that market makers had over-reacted to the news. Most analysts had believed that the government would refer the deal, which will create the UK's largest brewer, although some had hoped that Bass might get off more of 12m. lightly, with the government demanding a number of

undertakings. A recovery in the price during the day was strengthened by an unexpected confirmation by Bass that it was fell sharply. in discussion with Bristol Hotel Company in Dallas. The talks concern the possible acquisition by Bristol of Bass's Holiday Inn hotels in North America.

One analyst said the MMC referral was disappointing and that it would lead to FT 30 hourly changes four months of uncertainty for Bass, but he said the stock was undervalued and Most brokers argue that any weakness in the price was a buying opportunity.

Scottish & Newcastle rose 19 to 672%p, possibly in the wake of a recent "buy" note from SBC Warburg Securi-A number of upgrades in

forecasts for Wolverhampton & Dudley, following last week's results, was said to be responsible for the shares Bass rose 14% to 803%p strengthening 13% to 622p.

WANT THE GOOD NEWS?

OR THE BAD NEWS?

Grand Metropolitan hardgovernment's referral of the ened 9 to 443%p. A "buy" group's proposed acquisition note from Lebman Brothers said that it seemed firmly back on the growth track.

BTR advances

The re-rating of BTR gathered pace as investors tumbled to 770p after the responded enthusiastically to the company's positive trading statement and the subsequent comment.

The stock was the only Poolsie constituent to record a net gain after Friday's statement and yesterday the shares rallied a further 11% to 249p in chunky turnover

BTR said in the statement that second half performance should show an improvement over the first six months trading, when BTR's profits and dividend ell sharply. The company posted a One newspaper said the decline in profits for the

shares could merit a re-rat- half-year to £74m compared ing as they are currently with £76m for the same gained 12% to 500p, after

trading at a prospective period last year. GEC advanced 5 to 368%p after hints that the company was looking for overseas defence link-ups. One newspaper said GEC was looking at possible deals with products group, rose 4% to 343%p on a weekend press French, Italian or German recommendation, companies, after the French government called a halt to the sale of Thomson.

GEC was said to have preferred a tie-up between its defence arm GEC-Marconi and Thomson, but talks are not possible until France decides how to restructure its industry.

Holding Company for Itarai Electronics bounced Carclo Engineering fell sharply when the company 8 to 2461/2p on positive weekend press comment, which announced a drop in firsthalf profits and gave a downsaid long-term holders of the beat statement. The shares stock should not be too fell 48% to 202%p although gloomy and that Sir Ernest no trading was recorded. Harrison, the chairman, had a remarkable ability to spot

opportunities. Last week, the stock hit a year's low of 218p after the company issued a profits warning the day before releasing first-half results.

Electronic Data Processing rose 13 to 72%p after the company posted a drop in received significant orders since November for some of its new products.

Technology group BTG -already one of the UK's top performing stocks this year tumped 75 to 2387%p after a press report said it should continue to rise and was on track to meet analysts' expectations this year. Technology group Microvi-

tec slumped 7% to 20%p on a warning that profits for the year would be significantly below expectations. Chiroscience rose 11 to

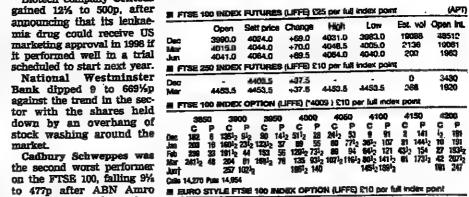

329p. The drug research company, said it had been granted "investigational new Administration (FDA).

Biotech company Celltech announcing that its lenkaemis drug could receive US marketing approval in 1998 if it performed well in a trial scheduled to start next year. National Westminster

Bank dipped 9 to 669%p against the trend in the sec-

to 477p after ABN Amro Hoare Govett, its house broker, downgraded its pre-tax profits forecast for 1997 from £635m to £610, mainly because of currency consid-

Dow rallies strongly at midsession

US investors streamed back into equities, helping shares regain almost all of the losses that they sustained on Friday, writes Lisa Bransten in New York.

Technology shares were especially strong with the Nasdaq composite, which is weighted toward the sector, on course to set a new record high. In early trading the Nasdaq had recovered more than the 12.44 it lost on Friday with a gain of 18.41 at 1,306.09. The Pacific stock was 1.6 per cent stronger.

At 1 pm, the Dow Jones Industrial Average was 49.57 \$% at \$14%. stronger at 6,431.51, about 5 points short of recovering all of the ground it lost on Friday amid jitters caused by remarks from Mr Alan Greenspan, chairman of the Federal Reserve.

The more broadly traded Standard & Poor's 500, however, did manage to regain all and more of Friday's 4.78 fall as it rose 6.37 to 745.97. Volume on the NYSE came to 214m shares.

Gains were led largely by sharp increases among large capitalisation technology companies. Intel, the biggest company on the Nasdaq, added \$24 at \$128, Microsoft rose \$3% to \$80, Cisco 25 cents to C\$46.75 but Cana-Systems \$1% to \$66% and

Oracle \$2% to \$48. Computer makers were also strong. Dell Computer climbed \$2% at \$59%, Gateway 2000 added \$2 at \$63, shares added 70 cents to Compaq Computer was \$1% C\$54.70.

which is a component of the Dow, rose \$1% at \$157%.

The market liked Hayes Wheels International's bid to buy more than three quarters of Germany's Lemmerz Holding, for about \$240m. Shares in the US company rose by \$1% or 5 per cent to

Santa Fe Pacific Gold gained \$1 or 7 per cent at \$16% after reaching an agreement to be acquired by Homestake Mining for about \$2.8bn. The move came just days after Newmont Mining Exchange technology index made a bid for Santa Fe. Shares in Newmont lost \$14 at \$46% and Homestake lost

> Southwest Airlines fell 3% to \$24 after warning that it expected fourth quarter earnings to be "substantially below" profits made in the same period last year.

> TORONTO more than made amends for Friday's declines and, at noon, the 300 composite index was up 59.00 at 5.869.06.

> Transport was the top performing sector with a rise of almost 2 per cent. Banks were also in demand with Royal Bank of Canada up 75 cents at C348 and Toronto-Dominion Bank C\$1 better at

Alcan Aluminium dipped dian Pacific gained 75 cents to C\$35.15. Speculation resur-faced that Seagram had its sights set on EMI, the UK music business. Seagram

Santiago tries to halt slide

percentage point at midsession in a technical rebound after two weeks of heavy losses. The IPSA index, which closed at lows for the year on three occasions last week, stood at 90.48, up 0.93, although analysts commented that there was little news to justify a strong

Dealers noted that leading stocks had fallen by about 7 per cent over the last fort- day's 70 bolivars loss.

SANTIAGO recovered a night, led by slides in the electricity sector. They added that power stocks were expected to remain unsettled by worries over the impact of this year's CARACAS slid 1.4 per cent

at 'midsession as trade wound down ahead of Christmas holidays, The IBC index fell 87.71 to 8.016.4 but CANTY, at 1.810 bolivars. recouned 35 bolivars of Fri-

Frankfurt leads senior bourses higher

EUROPE

Friday might never have happened. The dollar rose more than a pfennig, bonds were strong, and the Dow was 40 points better towards the end of the European day; in FRANKFURT, Bank Julius Baer was predicting that the Dax index could rise by another 12 per cent to the 3,200 level next year.

On the day, the Dax led senior bourses higher, closing up 37.77 or 1.3 per cent at an Ibis-indicated 2,870.30. Turnover showed some signs of reserve, falling from DM14.8bn to DM9bn Front line cyclicals were

in the charts again, BASF rising DM2.49 or 4.25 per cent to DM61.14 after Friday's 4.2 per cent fall, and Continental, the tyremaker, up 63 pfg or 2.3 per cent to DM28 after a previous 4.1 per cent drop. In carmakers, BMW rose

DM33 to DM1,064 but Volkswagen, DM5.85 higher at DM602, lost most of an early climb to DM608.75 it regia-tered on news that its chairman, Mr Ferdinand Piech. was poised to express its regrets to General Motors over the alleged industrial

espionage issue. Drug companies were less fortunate, Merck falling 70 pfg at DM56, Schering DM1 at DM130.50 and Schwarz

Pharma 50 pfg at DM113.50. Schering denied takeover rumours yet again last week and, according to Mr Michael Boch, head of BZW's Frankfurt office, Schwarz had just said that fourth quarter prescription sales were being cut back because of limitations on German

health insurance budgets. STOCKHOLM, in contrast saw strength in its pharmaceuticals sector as the Affärsvärlden general index rose 24.9 to 2,341.6.

Astra climbed SKr13 to a record SKr345, still boosted by takeover talk. The shares stepped into the spotlight last week amid rumours that Investor had sold its stake in Astra, and that the drugs company planned links

with its Swiss rival Roche The upbeat mood spilled over to Pharmacia & Upjohn, up SKr6 at SKr266, also supported by a strong opening for pharmaceuticals on Wall

prices. MoDo rose SKr3 to SKr191 as it declined comment on its plans.

said they had decided to wait before raising their ZURICH rebounded with

Electrowatt, the power utility, jumped SFr29 to SFr511 on a press report that CS Holding was about to sell its stake, and rumours that

SFr10,075 was attributed to a rose 25 centimes to FFr7.15. Among second liners, Club recent string of positive bro-

kers' recommendations. Swiss Re was up SFr17 at SFr1.408, benefiting from news that it intended to buy hopes after five shareholders INA's Italian reinsurance unit for around SFr500.

PARIS had a bad day for motor stocks and recovered only 30 per cent of Friday's near-53 points' shakeout for the CAC-40 index.

At the close the lead index as up 15.12 at 2.255.84 in modest turnover. Renault stumbled FFr2.60 to FFr114.30 and Pengeot FFr1 to FFr612. Michelin, the tyre giant, completed a dreary session for the automotive sector, sliding FFr8.50 to

Defence plays supplied plenty of bounce with Lagardere, up FF18 or 5.6 per cent at FFr150, providing the best individial blue-chip performance. Thomson-CSF gained FFr2.00 to FFr167.

Eurotunnel, lifted by the restart of Shuttle services, at Fl 97.50. Hoogovens,

where shareholders had lately heard news of a Belgian link and broker buy recommendations, added Fi 1.80 to Fi 70.40. Hagemeyer rose F11.70 to

FI 135.40 on news that its Hong Kong unit plans to seek a bourse listing within two years to help finance an acquisition.

At the close the ARX index was 7.64 better at **623.90**.

MILAN bounced back. helped by strong bonds and a firm lira and the Comit index rose 4.28 to 650.78.

Against the trend, Fiat fell L62 to L4,384 after the prime minister, Mr Romano Prodi, dashed hopes of government help for the ailing car sector. The idea of incentives for car buyers had gained credence in recent weeks on the view that a large part of the cost offset in the short term by increased tax revenues as a result of improved sales. However, Mr Prodi said that he did not believe that special financial incentives were the best way to revive flagging car sales in Italy.

Pirelli & Cie. the holding company, rose L40 to L1.960 on further speculation about a group restructuring.

Philips gained Fi 1.50 to F169.10 and Aegon put on Written and edited by William Cochrane, Michael Morgan and F12.70 or almost 3 per cent

Nikkei sees robust rebound as China Bs surge

After a besitant start, TOKYO staged a robust comeback with many investors repurchasing issues they had dumped last Friday, torites Guen Robinson.

Wall Street's relatively calm response to comments about US financial asset prices by the US Fed chairman, Mr Alan Greenspan, encouraged investors to place buy orders from midmorning and the Nikkei 225 average climbed 327.01 or 1.6 per cent to 20,603.71 after moving between 20,396.69

Volume thinned to an estimated 237m shares from Friday's 441m. Advances led declines 755 to 305, with 173 unchanged. The Topix index of all first-eaction stocks rose 15.76 to 1,582.77 and the capital-weighted Nikkei 300 by 3.15 to 290.14.

In London, the ISE/Nikkei 50 index added 3.35 to

The hunt for internationally competitive companies with strong growth prospects brought NTT into its net. The telecoms complex hit a new high for the year of Y871,000, up Y26,000 and well above its previous 1996 high of Y866,000 posted January 4.

Its strong performance in recent sessions indicated overwheiming endorsement of the plan, finalised last between NTT and the government, to split the group into several long-distance and regional phone opera-

tors and bring it into the its best level of the year. field of international operations. Meanwhile the rival telecommunications carrier. DDI. retreated

Y11,000 to Y806,000.

The broad market continued on a two-track path, with strong performers such as electricals, high technology and precision instruments actively pursued, and laggards such as construction stocks under selling

TDK advanced Y90 to Y7,490, Canon Y50 to Y2,560 and Sony by Y50 to Y7,520. Ricoh, the day's most active issue, added Y40 to Y1,330 in volume of 5.2m shares.

Pharmaceuticals continued their recent advance. Takeda Chemical industries rose Y60 to Y2,420 and Eisal by Y40 to Y2,400, Some banks broke out of their recent slide, Sakura Bank adding Y13 to Y967 and Fuji Bank Y20 to Y2,200.

in Osaka, the OSE average ume of 20.8m shares. China's two hard currency

B share markets continued to rocket ahead as domestic investors targeted so called "rubbish shares" - low priced, unpopular issues, shunned by foreigners. SHANGHAI's B index jumped 8.641 or 13 per cent to a 1996 closing high of 75,331 in record turnover for

the year of \$34m. SHENZHEN'S B shares added 17.35 or 9.6 per cent to 198.14, the highest since November 1993, in turnover that picked up to HK\$779.2m.

War of words Valéry Giscard d'Estaing (left), the former French president, last month argued the case for a lower rate for the franc and the D-Mark against the US dollar. He went on to suggest that if Germany refused to act jointly, France should devalue the franc unitaterally. Mr Giscard d'Estaing's call was backed by two members of the Bank of France's monetary council. As a result the franc lost some ground but firmed again when a string of leading figures, including President Jacques Chirao (above) and Jean-Claude Trichet (right), the Bank of France governor, reiterated their support for the current franc/D-Mark

parity. See story page 2.

treasury debt, stock market the foreign exchange marprices and derivative products to be quoted in euros from the start of 1999, for

Yet discussion around the euro is far from limited to the technicalities. Former president Valéry Giscard d'Estaing, an ardent European, broke something of a taboo in November by arguing the case for a lower rate for the franc and the D-Mark against the dollar. He added that France should devalue the franc unilaterally if Germany refused to act jointly.

His comments caused downward pressure on the franc after Philippe Séguin, head of the National Assembly, and two members of the monetary policy council of the Bank of France, expressed support for his

It took comments from President Chirac and Jean-Claude Trichet, chairman of: ence for the bid by the Mr Juppe as the new head of will now meet its deficit mr already been taken for all the Bank of France, to calm its social security reforms, it ment to shareholder value in flavour.

Ruling party politicians

have become increasingly careful in the way they invoke monetary union, since the Maastricht treaty has become a scapegoat for all of France's troubles. The principal reason for this hostility, for the continued poor popularity ratings of the government, and for the general gloom still pervading the country, is clearly the record French levels of unemployment, which stood at 12.6 per cent or about

3.1m people in October. The fear of social unrest, with memories of last year's strikes still fresh, appears to have caused the government to put a brake on its reform programme, and cast a nervous eye towards the next national elections due in

Although the government has slow-pedalled on some of there is also a fresh commit-

has pursued its initiatives on France. The concept was

hospital reform, public spending reductions, modifications to the income tax rate transactions over the system, and incentives to reduce working hours which help create new jobs.

There are other signs of progress in France, too. Interest rates are at historically low levels, and the country's export trade surplus continues to rise. At the start of this month, the CAC-40 index of leading quoted shares continued its rally since the summer to almost reach its record high. Equally, new legislation

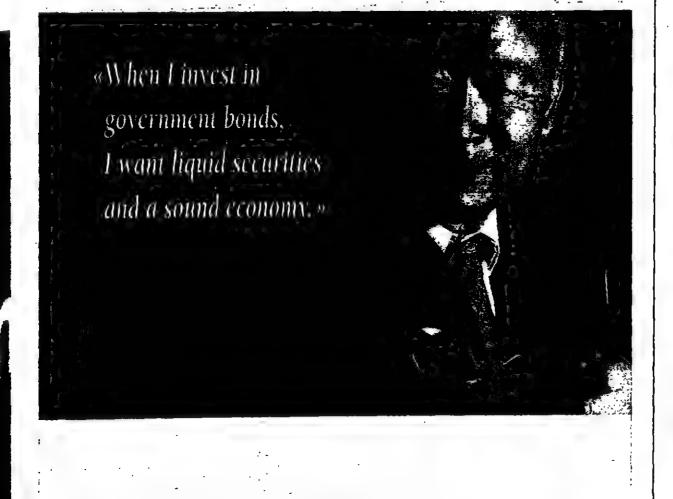

has cleared the way for private, complementary pansions, which should help address the problems with the under-funded state system, and create new pools of money that can be invested productively in the equity

At least in the rhetoric,

used to help justify some of the most important corpopast few months, including the unprecedented demerger of the Chargeurs group into

two quoted companies. Equally, it helped motivate the takeover of the quoted retailer Docks de France by its rival Auchan, the purchase of a majority stake in Banque Indosuez by Crédit Agricole, and the proposed acquisition - the first of a privatised company - of the insurer UAP by its competitor Axa.

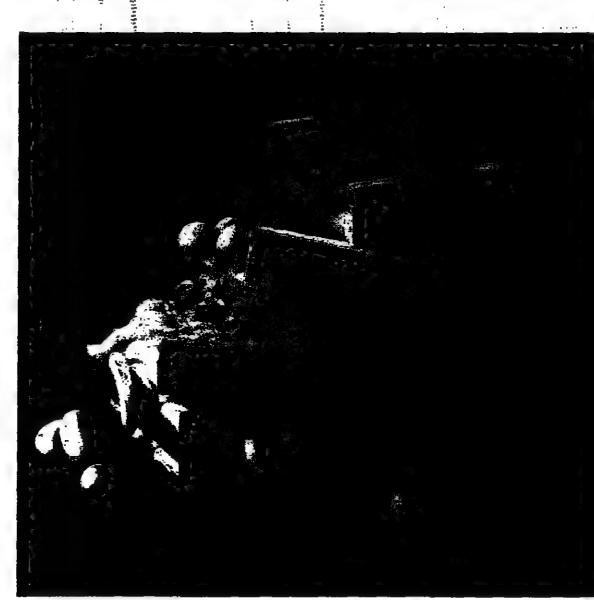

The irony is that Auchan is privately-held, and both Crédit Agricole and Axa are ultimately controlled by mutual companies. That is testimony to the continued weakness of French quoted companies compared to other forms of ownership. Capitalism is clearly still retaining a distinctly Gallic

The French economy is one of the largest and most successful in the world. French government bond markets offer first-rate liquidity, with regular auctions of a range of highly marketable products, backed by a transparent future issues strategy, efficient settlement systems and active derivative markets. Are you profiting from French government bonds?

The economy: by David Owen

Rough ride to growth target

The chief economic scourge is the record 12.6 per cent level of unemployment

The French economy has had a bumpy ride these past four quarters. In two of them, the country's gross domestic product actually declined; in two, it grew at a respectable rate. But the net result of this uneven period is that the government is on course - just about - to hit its undemanding target of 1.3 per cent growth for the

There is still a chance that widespread industrial action in the last three weeks of 1996 might upset such expectations. Most other doubts about the target's attainability were removed in the last three days of November.

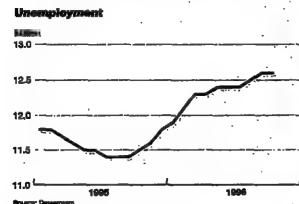

First, Insee, the national statistics institute, published figures showing that thirdquarter growth had been a relatively healthy 0.9 per cent and that the second period had not been as bad as first thought, although the economy still shrank by 0.2 per cent.

Then, the following day, the 12-day truck drivers' strike ended. The governmay yet suffer if the drivers' victory encourages other workers to adopt more aggressive action in pursuit of their own claims. But the dismantling of the road blocks removed the immediate threat of economic disruption on a par with the highly damaging public-sector strikes that paralysed the country last winter.

Eric Chaney, senior economist with Morgan Stanley in Paris, believes the truck drivers' strike will have had no serious impact on growth: last year's stoppages contributed heavily to the 0.4 per cent contraction in GDP in the last quarter of 1995.

If this year's growth target is achieved, it will be in spite of the government's inability to stem France's high level at a record 12.6 per cent. although figures for October. released earlier this month, showed the actual number of jobless edging down - to a fraction over 3.1m.

The government, in effect,

is boxed in. Its commitment both to the franc fort and to reducing its general financial deficit in line with the Maastricht convergence criteria for European monetary union severely limit its scope for adopting unilateral fiscal or monetary measures to combat the problem. In any case, interest rates have fallen markedly in the past 12 months while unemployment has carried on rising. This tends to support the case of those who argue that structural rigidities in the French labour market are at least partly to blame and that cutting interest rates further to allow a depreciation of the franc would do little to help.

so high and many industries in the throes of restructuring, the idea of increasing flexibility by easing long and costly redundancy procedures is, not surprisingly, highly controversial. Last month, prime minister Alain Juppé sought to distance himself from reports that he had set out the need for redundancy reforms to a closed session of the national executive of his ruling RPR Gaullist party.
It remains unlikely the

government will grasp the nettle and attempt to push through such reforms in advance of the next legislative elections due by spring 1998, even if it becomes convinced that this is the direction in which to move. But support for some limited changes appears gradually to be increasing, Jean Gandois, head of the Patronat, the French employers' federation, recently added his voice to calls for greater flexibility, calling for the procass of taking staff on to be exempted from all formalities and saying employee reductions were "blocked by procedures that were too long, too complex and too

If unemployment is one current economic low point, another is business investment. This has been much lower this year than origiof unemployment, the chief nally expected, with compaeconomic scourge and one of nies seemingly awaiting a the principal reasons for the more sustained upturn in morose mood. This remains demand before committing themselves to substantial outlays. The picture improved in the third quarter, however, which brought a 2.7 per cent jump after a 0.9 per cent second-quarter

Against the D-Mark (FFr per DM)

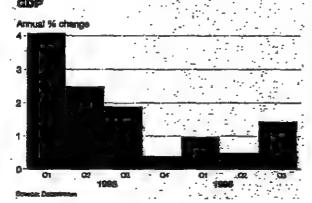

A higger-than-expected reduction of stocks has been a further negative factor in 1996 growth. Though some of this is no doubt attributable to more efficient management, analysts increasingly expect the tables to turn in the final quarter and beyond. As Morgan Stanley's Mr Chaney observed in response to the latest cut in inventories: This is positive for the future, since ever sustainable path".

Economic bright spots have included consumer spending, which has performed better than expected as families have dipped into their savings to help fund purchases, and the country's still expanding trade surplus. This has found a second wind in recent months after appearing to run out of steam earlier in the year.

Yves Galland, trade minister, last month seized on September's FFr10bn surplus ning total for the first nine months stands FFr72.32bn in the same period last year.

The impressive size of the surplus has been one of the chief weapons in the armoury of franc fort defenders, such as Jean-Claude Trichet, the Bank of France governor, in their recent war of words with increasingly vocal advocates of the currency's depreciation. These are headed by Valery Giscard d'Estaing, the former French president, who last month suggested France persuade Germany of the need for a lower rate for the franc and the D-Mark against the US dollar. He went on to argue that if Germany refused. France should devalue unilaterally. The currency lost some

ground as a result of Mr Giscard d'Estaing's call, which was backed by two members of the Bank of France's monetary council. But it then firmed after a string of leading figures, including President Jacques Chirac and Mr Trichet himself, reiterated FFr120bn after just over seems the country's leaders FFr100bn in 1995. The run-remain determined to pursue the franc fort policy, at least in a European context, even FFr86.76bn, compared with if the questioning of its appropriateness is becoming

■ Preparing for the euro: by David Buchan

Big Bang switch in 1999

The money markets in general will work from day one in euros

The fact that as a country we are extremely centralised will, for once, help," says Gérard Pfauwadel, president of the Matif futures and ontions exchange. He was commenting on the plan for Paris' financial markets to switch to the euro in January 1999. "It will ensure coordination, and that every one plays the game."

So, on the first day of trading in 1999 - January 4 - all money, bond, stock and forign exchange markets in France will change to the new currency, just as the European Central Bank (RCB) begins to conduct its nonetary and exchange rate policy in euros. But while the markets will work from day one in euros, stock prices, for example, will still be quoted in francs as well. as enros and customer accounts and tax statements will almost certainly remain

One can't do everything at the same time, so we decided to give priority to capital markets," says Pierre Simon, of Compagnie Bancaire and president of the 'euro group" at the French Association of Credit Institutions. "A large number of bank clients will choose to keep their accounts in francs, which will remain until 2002 the medium in commerce and in all dealings with the tax authorities and the social security sys-

But the French government's decision to convert. in January 1999, all its outstanding public debt into euros should ensure the rapid formation of a euro-deitself essential to the conduct of monetary policy by the European Central Bank. The likely nature of this monetary policy is not expected to pose any technical problems for banks, with one or two minor exceptions on reserve and refinancing

regramentations. The ECB is expected to make more use of reserve requirements than does the Bank of France, which only requires French banks to deposit the equivalent of 1 per cent of their outstanding credit with it. French bankto predict that the overall their support for the current credit with it. French bank-1996 figure could rise to franc/D-Mark parity. It ers are not averse to this ratio being increased by the ECB, because it might help smoothe out interest rate fluctuations on the money market. This, in turn, would reduce the need for fine-tuning by the ECB and its regional agents (the national central banks), and thereby ease the task of decentralised conduct of monetary

> policy. "Central banks always find it a bit irritating that the money markets are constantly looking for signals from the central bank, whose daily intervention can sometimes be misunderstood," says Mr Jean-Plerre Patat, head of the Bank of France's international department.

French banks also want to continue to use private paper - essentially bank

credit to companies with a rating - as well as government securities for collateral for refinancing with the Bank of France. They expect to continue to draw their refinancing locally, but would like to draw on paper circulating elsewhere within the euro zone. This could perhaps be guaranteed by another national central bank in the euro zone, suggests Mr Patat. in a form of correspondent central banking". France remains insis-

tent that credit creation in the planned Target system of payment settlement within the euro zone should be confined to banks within the EULLO RODGE There are many reasons

why French capital markets are planning their Big Bang Some are technical. One is to avoid favouring one market over another - bonds over shares, for example. Another is to avoid credit institutions having to make too many internal conversions, according to different categories of assets or liabilities. Above all, the financial markets want to maximise investments in technology and

future competitive gains. Paris has been trading bonds and shares electronically for the past 10 years, without any exchange of paper. The Sicovam electronic system keeps track of shares, while the Relit system settles share transactions once a day. The latter will be replaced next year by RGV (Reglément à Grande Vitesse, of course) that will settle share transactions continuously. Moving to the euro will require considerable changes to computer software, but an instantaneous switch is technically possible in Paris in a way that would not be possible in other European markets.

A sudden change will suit investors, says Jean-Francois Théodore, president of the Paris Bourse. "The euro zone will be regarded by pon-European investors as a single zone, and all the indiinstance, big US investors will very rapidly want to reallocate their investments accordingly and place their money in euros."

If Paris can be ready for the sure before other European capital markets, it may make a permanent gain. Timing is everything," says Mr Pfauwadel, He cites the example of London. "Trading in the 10-year Bund was initiated in London, and the Germans have had great difficulty in recapturing the market. One hundred per cent of trading in 3-month Euromarks and 60-70 per cent of Bunds is still in Lon-

The Matif already has the principal market in bonds

will have the advantage of being exchangeable one-forone into euros in 1999. It trades an average of 3,000 Ecu bond contracts a day. helped by the fact that the French Treasury is the main and most regular issuer of Ecu bonds (Ecu5bn in the first 10 months of this year).

100

preparations. It has mounced plans for a new range of futures products, including a three-month euro contract to be introduced as early as April 1998. The Matif has also matched Liffe in London by signing an agreement with the Chicago Mercantile Exchange for its euro products to be traded after Paris closes. "The euro will be traded globally 24 hours a day, and it makes sense to extend liquidity beyond the European time zone," says Mr

The problem for the Bourse is different. In contrast to the money and bond markets, the advent of the euro will not change the nature of its "products", but will pose the challenge of how to avoid confusing its clients.

Mr Théodore takes heart from an opinion survey earlier this year of French shareholders, which showed that most of them are happy to see the Bourse move in 1999 to quoting stocks in denominated in Ecus, which euros (as well as in francs).

III Paris Bourse: by David Buchan

Good year for equities

The Bourse expects a further boost as private pension funds invest in shares

Cheered by lower interest rates and the prospect of fresh resources from new-

style pension funds, the Paris Bourse has had an exceptionally good year. The number of transactions or matched trades this year reached 23.5m by the start of December, surpass ing the 1994 record of 22.8m. in value terms, this

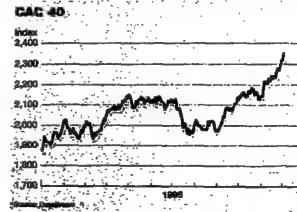

amounted to some FFr1.100bn (\$210bn) and will probably reach FFr1,300-.400bn by the year's end. The Bourse's main two indices have gained 25 per cent this year. The CAC-40 hit 2,348 on December 3, not far from its record of 2,355 in February 1994, while the broader SBF-250 had risen to 1,548 by the end of -November. By the start of this month, too, the market capitalisation of the Paris Bourse crossed the FFr3.000bn for the first

time, to reach FFr3.100bn. To Jean-Francois Théodore, president of the Bourse, there is no magic about this, "We had some catching up to do with other stock exchanges Paris was a bit behind in 1995 due to the political uncertainties surrounding the presidential election and to social problems." He adds: "Indeed the potential of this catching up will not, in my opinion, be exhausted until we go beyond our historic record of February

Sectorally, the big gainers this year have been shares in retail distribution (60 per cent), consumer goods (52 per cent), investment and holding companies (36 per cent), capital equipment (29 per cent) and energy (26 per cent). Those with below average gains include property (3 per cent), financial services and banks (9 per cent) and cars (12 per cent).

Over the longer term. Mr Théodore expects a further boost to come from private capitalised pension funds investing in the Bourse. Legislation to create these pension funds is currently

h

How interest in equities has evolved her of shereholders of auster) comparise (million)

1978 1979 1982 1987

passing through the French parliament. Initially, the pension funds are expected to attract some FFr30-50bn in savings, of which at least a third will probably go into shares. On its first reading of the pension fund bill, the National Assembly decided pension funds should put no more than 60-65 per cent of their money in bonds, with the rest going into serards

"My personal opinion is that over the medium term pension funds will invest mostly in shares," says Mr Theodore. For, the government has decided that benefits from the new pension schemes should be mainly paid out in the form of annuities, rather than in a lump sum on retirement. This will tend to favour investing in shares, whose annual rate of return is generally higher than bonds." he says.

Mr Théodore also believes the pension funds will attract some of the huge amount - FFr500bn a year which has been going into life insurance. In the absence of private pension

schemes up to now, people have used life insurance to save for their retirement. "So I think the arrival of pension funds will be much more important for the Paris Bourse than people think," he says.

By contrast Paris' Nouveau Marché for fledgling companies has had a harder time since it was created last March. "But I do not see any reason to be pessimistic," says Mr Theodore. We will have at least 17 introductions to this market by the end of the year. It is true that some stocks are trading below their initial price, but of the 12 launched between March and July. 10 are doing fine."

However, Mr Théodore concedes such new companies need to be more modest and transparent, "Perhaps the issue prices should be a bit lower in the future," he cautions. And from next year, companies on the Nouveau Marché will be required to make quarterly reports - on turnover, if not profit - to keep investors more abreast of what they are up to.

Banks: by Andrew Jack report worsens crisis

The Senate finance commission has called for sweeping reforms

When the French Senate issued a critical report on FFr100bp. the state of the country's hanks last month, it sent shock waves across the already deeply fractured sec-"The banking sector is fac-

ing a crisis without precedent," says Alain Lambert. secretary of the Senate finance commission which produced the study and which calls for a series of sweeping reforms.

The report demands modifications to tax and labour laws, an overhaul of the statutes of the Caisse d'Epargne national savings bank. greater transparency in the financial activities of the Post Office, and restructuring of a series of savings products and long-standing operational practices.

Yet, while the French public widely believes its banks to be rich, profitable, greedy and exploitive, investors - in particular those with an international perspective have a very different analysis of the situation.

The plight of Crédit Lyon-nais is only the most highprofile example of the problems. The state-owned bank is now in the throes of developing a new restructuring plan, which could bring the total costs to the tax payer of its rescue and preparation for privatisation to nearly for credit from households

More generally, in 1994 and 1995, banking income and loan portfolios for all French commercial banks contracted in real terms for the first time since before the second world war while provisions against bad loans soared. It was only in the first half of this year that the situation started to

For most observers, the need for reform is as pressing as ever. Stéphane Arronays, banking analyst with BZW in Paris, says: "After the defence and telecoms sectors, it is clear that financial services must be the next restructuring project for the government. France cannot continue to have second-ranking banks."

For the last few years, the unprecedented property crisis has weighed heavily on the results of the banks - as well as of other financial institutions such as the state-backed insurers - which invested in

development projects, nota-bly of Parisian offices, just ahead of the slump of the early 1990s. The downturn in the

domestic economy also had a far broader negative impact on results, with banks suffering from lower demand and companies on the one hand, and higher defaults on the other as the number of individuals and businesses unable to pay their debts

But aside from these cyclical factors. Mr Arrouays has another explanation for the crisis of the past few years. It echoes the criticisms made by the country's commercial banks, which have become increasingly vocal in the past two years in lobbying against a series of perceived

competitive distortions. For example, a government decree dating from 1937 acts as a straitjacket on modifications to the working hours of bank employees, making all but impossible innovative practices such as Saturday morning or weekday evening opening in branches, or telephone bank-

Equally, the long-standing "Livret A" and "Livret Bleu" national savings schemes

can only be offered to cus-tomers through the Post Office, the Caisse d'Epargne and the Crédit Mutuel Bank, bringing an additional respectability and customer base to these institutions to the detriment of their commercial competitors. The Caisse d'Epargne is a

narticular target of criticism. from the French Senate as well as from rival banks. Its peculiar legal status with no external shareholders imposes on it very limited accountability and no incentive to make profits or provide a significant return on

equity. It is clearly not a coincidence that it announced plans earlier this year to consider revisions to its statutes, and to launch a "social dividend" distributed from its profits, as part of efforts to pre-empt further criticism or external interference.

However, a number of commentators argue that the commercial banks are themselves to blame for much of the current crisis, and were far too quick to indulge in victous price wars over interest rates in the late 1980s. which have left them with

extremely low margins. Ziad Sarkis, managing director of consultants Mitchell Madison in Paris,

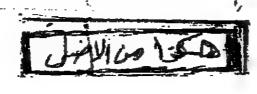

also stresses the banks' lack of innovation in the past 15 years, failing to develop cobranded and credit cards, and inadequately investing in information technology.

There are signs that the situation will not be maintained much longer. The Senate's report gives strong hints of the direction being taken by the government, which is drawing up proposals for a new banking act. Meanwhile, the prospect of intensifying competition partly as a result of the

immanent prospect of European monetary union ~ is forcing banks to adapt. Crédit Local de France unveiled earlier this year a merger with Crédit Communal de Belgique. Crédit National acquired BFCE. And Credit Agricole bought Banque Indosuez from the Suez group. Foreign buyers still

remain suspicious of French banks, illustrated by the fact that none came forward with a serious offer for CIC, the state-owned banking network, whose privatisation has now been suspended. But some have shown a willingness to acquire the

more profitable niche businesses, such as the nurchase last year of Sovac by General Electric.

Insurance: by Andrew Jack

Tumultuous shake-up

The sector may be entering a phase of restructuring as UAP and Axa prepare to merge

()

It has been a tumultuous few months for the French insurance sector, torn between heavy provisions, modifications to its distribution systems, privatisations, mergers and abrupt management changes. In the past few weeks, there has been more activity than in the previous several years.

There has been quite a shake-up," says Michael Lindsay, an insurance anslyst with Lehman Brothers. "It looks as though the sector is entering a phase of restructuring."

Another observer of the market put it rather more bluntly. "In the late 1980s, the French insurers wanted mistakes were all their own doing, with too many acquisitions and all their investment eggs in one basket. Now they are left with just one player.'

He is referring to the proposed "merger" of UAP and Axa, unveiled in the middle of November, which will create the world's largest insurer by assets under management, and the second largest by turnover, a giant which dwarfs all domestic competition and a good deal of that in other countries.

It had already been a busy enough year for Axa, the quoted insurer which is still ultimately controlled by a network of French mutual insurers. The group had an insurance analyst with rump of which has now been placed on the stock market. and which provides the

launching pad for Axa's ambitions in Asia. it had also finally unwound its complex crossshareholding with Generali, the Italian insurer, which dated originally from 1988. The relationship had never led to any significant co-operation, and in a two-step process over several months, it was dismantled.

It would be hard to imagine a more typically French set-

PROFILE

the rapidity with which the new combination took place was stunning. Even in late September, Claude Bébéar. Axa's chairman, was denying that his group was interested in other acquisitions.

Yet on November 7, Mr bear made his initial offer it but critical mes to Jacques Friedmann, his counterpart. With just the weakend to negotiate, and the pressure of two rival insurers including AIG. threatening to take stakes in only long enough to raise the Axa offer by about 10 per

They approved a complex deal worth nearly FFr50bn (\$9.65bn) ratified by the board on Monday and announced on Tuesday November 12, which involves an exchange of four Axa for every 10 UAP shares. plus additional "contingent value rights" payable by Axa to conquer the world. The in cash if its shares have not reached a target price of FFr392.5 by June 1999.

There is little doubt that the operation represents a takeover, and indeed the first of a privatised company since UAP was sold in 1994. It also represents perhaps the best way for UAP's abareholders to gain some return after seeing their investment languish for so long below the sell-off price.

Some analysts are more sceptical about the attractiveness of the deal to Axa, at least in the short term. The acquisition represents a substantial premium, and cost-cutting at UAP could prove to be challenging, recapitalisation of FFr5bn However, as Simon Rudolph, completed its acquisition of Morgan Stanley, puts it: few months both GAN and a controlling stake in "You have to give Axa CIC face the difficulty of National Mutual, the Austra- credit. privatised earlier in the year at a price which appeared attractive given its substantial internal restructuring and the cyclical low in equities. AGF has benefited from the subsequent share rally, but some question whether

Yet the real challenge for the insurance sector is the state-owned GAN group. Since 1994, it has drip-fed losses, unveiling in October figures in the red by FFrihn UAP, its executives held out for the first half of 1996, and warning that the result for the full year was likely to be twice that level.

Some of the problem relates to its underlying insurance business, including the legacy of premium reductions it practised in the early 1990s. But much is the result of its banking activi-

operations of CIC also pose a substantial challenge. The bank is reported in GAN's books at FFr14bn. Yet when the French government launched a partial privatisation operation for two-thirds control of CIC earlier this west, just two serious candidates came forward with bids placing its total value at about FFr10bn.

The sell-off has now been halted. If it recommences at anything near this value, GAN will be forced to report a substantial capital loss in its accounts. Coupled with the insurer's continued problems from its other operations, it seems likely that it will require perhaps a

before GAN can be sold. Meanwhile, over the next from a series of rationalisa- and Bernard Yoncourt respectively were ousted by

> Aside from the gloomy prospects for GAN, not everything in the sector is so gloomy. The FFSA, the ance companies, succeeded governing the relationship between "general" or tied insurance agents and their employers, in a move which breakthrough in the distribution of insurance.

■ Pensions: by Andrew Jack

Stage set for financial reforms

France now has legislation which makes private, complementary pensions possible

After long debate and many previous abortive attempt a surprisingly short piece of legislation was voted calmly and on schedule through the French National Assembly at the end of November. It sets the stage for what could prove to be one of most significant French financial reforms in recent years.

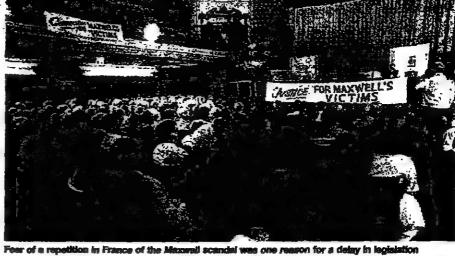

The hill finally creates the possibility in France of private. complementary pensions, funded jointly by employees and employers, which provide a breathing space for those increasingly concerned about the limits of the state-funded system into the next century. .

Civil servants have long had the option in France of making additional contributions to top up their pensions, and for several years the self-employed have been able to operate a complementary system thanks to legislation introduced by Alain Madelin, the former economics minister, early in 1994. But for the majority of

those in employment -14m French who work in the private sector - the public repartition system has been their only source of support on retirement, with today's pensioners funded by the social security contributions of the current working popu-

It is thus no surprise that those of more advanced years often joke about the need to indulge the young such as during France's periodic outbreaks of university unrest and student demonstrations - to safeguard the prospects for their own future income. But the situation is no lon-

ger a laughing matter. As France's population - like nations still to tackle the

those of other developed nations - has aged, there is an increasing imbalance between the size of the growing, retired population and the smaller working population required to support it.

That reflects a falling birth rate, but also longer life expectancy. Ironically, this demographic effect comes at a time when the pressure for earlier retirement has rarely been greater, a situation exemplified by the fact that the French government's and transport employers' concessions last month to truck drivers after a two-week strike including agreement to reduce the upper age limit

from 80 to 55. Equally, it was more than any other issue the government's proposals to increase the retirement age of train drivers - many of whom can leave on a full state pension at 50 - which triggered the social unrest and paralysing, lengthy strikes at the end of

Yet, while many other countries face the same prospect of deficits triggered by their state-funded pension systems. France remains one of the last western European problem with a complemen- equity market. tary system.

One reason has been fear of a repetition in France of the Maxwell scandal that so badly tarnished the image of iny-controlled pensions in the UK. More generally, the French unions have attacked any attempt to challenge the paritoire system of management of the state system, jointly run by unions and employers alongside the government.

Critics have also argued that a complementary system also runs counter to the French spirit of equality, creating two-tier provision, with different entitlements for those who benefit from retirement benefits not available to others.

In the absence of any official alternative pension system, the French have nevertheless resorted to a series of strategies to plan for retirement, notably through long-term savings schemes with tax advantages such as life assurance contracts.

Yet this has done little to help address the other problem which explains why many business groups have long called for a new pensions system in France: the absence of a well-developed

invested in bonds, thus all but ensuring that at least some of the money will be placed into equities.

But a number of questions remain. First, the significance of the take-up is far from clear. Companies or groups of companies must establish pension systems and pay contributions as well as their employees. Tax incentives will help make the system attractive, but still create an administrative burden.

The experience of the Madelin law for the self-employed shows that take-up has been limited, with just 125,000 contracts so far launched for retirement, and FFr3.6hn in total premiums collected last year, which includes a high proportion of contributions for other complementary forms of assis-

tance such as health care. Many of the details of November's reform also remain open to debate: the upper limit on bond investment, or whether to even include a minimum proportion which must be placed in equities; and the amount of money that can be with drawn as a lump sum (onefifth of that invested up to a limit of FFr100,000 under

current plans). In addition, there is the question of the regulatory requirements imposed on those groups which hope to manage the new pension funds. These funds have placed the commercial insurers at loggerheads with the mutual insurance groups and the banks, which control a high proportion of the market for life assurance con-

Over the coming months. the political battle over the principle of creating complementary pensions may well diminish, but it will clearly be replaced by an increasingly aggressive commercial battle between those financial institutions keen to take control of the new market.

> ated it 100 years ago. The UK is sensational at promotion, and the City is like a club. That is not something that comes spontaneously to the French." He adds that the choice of the organisation's name has turned out fortuliously to have an even greater signif-

icance since Europe's

finance ministers subse-

European competition," he

says. "We should have tre-

spirits are tright quantly decided that the

single European currency should be called the Euro. Paris Europlace's strength is to bring together some of the most influential financiers - from banks but also institutions such as the stock exchange - through gatherings including an annual dinner of "elegance

and the atmosphere of an Old Boys' Club", as he puts it, in Versailles, But it also plays a serious role in lobbying, working on such recent initiatives as changes to France's tax and administrative regime to make the country more

attractive to expetriates and to companies considering where to place their international headquarters. "We brought attention to the issue," says Mr Seillière. We have to be fiscally com-DeritiAs"

Europiace also helped

rate governance and the need for complementary pension schemes designed in part to help boost the French equity market. And it recently unveiled proposals for modifications to the country's substantial fund management industry. "The big flows of money

stoice the debate on corpo-

are coming from the other side of the Atlantic," he says. "We have to be in a position to please them. without renouncing our own identity."

Future projects for Euro-place include tax modifications to make French property acquisitions attractive to foreign investors: the provision of specialist financial training in areas such as share custody and a range of back office functions; and roadshows to the US and Far East.

While Europlace and its members have clearly had an influence on recent . financial reforms in France. it remains too early to tell whether it can win the battle to ensure the continued influence of Paris in the crucial next few years.

Mr Selltière remains up beat, "Our spirits are high," he says. "We have at least as much chance as the other centres. We are well equipped. London may be the place of reference for shares, but we have a chance for bonds."

Andrew Jack

4 FRENCH FINANCE AND INVESTMENT

Jean Arthuis, France's economics and finance minister, talks to Andrew Jack about the encouraging economic growth prospects for 1997

Staunch defender of move to the euro

Jean Arthuis, France's economics and finance minister, is not one of those individuals who has benefited from his government's recent initiative to encourage a shift to a shorter working week in an effort to create new jobs.

Looking tired but in good humour, he spoke in his office before heading off for a late official dinner. It was at the end of a day during which the sensitive privatisation of the electronics and defence group Thomson had been derailed, the French cabinet had met following a terrorist attack the previous evening on the Parisian rail network which killed two people, and he had spoken at attended a lively session at

the National Assembly. Yet be found reason to be remarkably optimistic. Mr Arthuis said the recentlypublished figures from Insee, the national statistical institute, showing third-quarter economic growth in 1996 of 0.9 per cent, and positively revised second-quarter figures, were

encouraging". "We have returned to the hypothesis of 1.3 per cent growth for 1996, which mused more difficult a few weeks ago. It shows that my predictions in March were instified, and we are on track for the 2.3 per cent growth for 1997 on which the Budget was based. Perhaps things will be better than

It is a growth target that the government can ill afford to miss. As the date for monetary union draws closer, and with it France's obligation by the and of next

year to cut its budget deficit to 3 per cent of gross domestic product, there is little room for flexibility.

Mr Arthuis says additional growth in the coming months will come from restocking, swelling order books and external trade. He draws hope from surveys of business confidence and some indications of economic recovery in neighbouring countries, notably Germany. "After a period of restructuring, we are now looking towards significant growth," he says.

However, he expresses disappointment at the low levels of industrial investment. My biggest satisfaction is the reduction in interest rates. Compared to other countries, they are among the lowest. The long-term, 10-year rate is lower than Germany. We have a real margin for manoeuvre for those who invest - compa nies, individuals and local authorities."

The government's record on unemployment is less edifying. It remains at a record 12.6 per cent, or just above 8.1m people. Mr Arthuis es the modest decline of 12,000 in October, and argues that the rise over the year reflected an increase of 150,000 in the active population while the total number of jobs available remained

He stresses initiatives taken in the past few months to reduce the social security charges on companies to encourage hiring, to boost youth training and recruitment, to encourage reduced working hours for those who want them, and to alter the

income tax thresholds in an effort to remove the unemployment trap which acts as a disincentive to work for those on low

He also hints that further eforms may follow, suggest ing that there may be scone to revise some of the existing labour laws. He will not comment on such controversial subjects as the minimum wage or the tough rules governing redundancy plans, given the probnability of an explosive reaction by France's unions, particularly at a time of such high unem-

In other areas, as a former accountant he highlights with satisfaction his efforts over the last few months to reform accounting standards and regulation, with the launch of two new organisa tions to tackle the task. "Democracy demands trans perency," he says.

Of even greater importance, he stresses the government's encouragement of private pension schemes, proposals for which were voted through November. "We have created sions a receptacle for long-term savings which works in the interest of investment in business."

He talks about the contin ued need to "improve the nomic system", including additional reforms to the state, and plans to help restructure the French banking and financial sector. But one of the minister's principal priorities in the coming months is the prepa

ration for the single Euro-

ean currency, of which France is determined to be a founding participant. He recently set up a committee to help co-ordinate different groups to enable the French people "to appropriate the new currency

He remains a staunch defender of the move to the euro, while echoing the goverament's more muted advocacy in recent months. The Maastricht treaty has been widely portrayed in France as a scapegoat for all the country's ills. For example, Maastricht or not, we must continue with the clean-up of public sector finances. Mr Arthnis puts it.

recent polemic unleashed by former president Valery Giecard d'Estaing over the need for a devaluation of the franc ahead of monetary union. "The real debate is about whether we can have the single European market

without the single currency," he says. "I don't think so without it being iniquitous. Economic actors He says he "rejoices" that

the Italian Lire was readmitted into the exchange rate mechanism, making it larger and more stable. "The euro will be one of the great currencies of the world. A credihis, solid currency is a factor

in relocalisation and job cre

Mr Arthuis says he is subisfied with the current franc exchange rate with the D-Mark. "The right rate is that one at which you get the lowest interest rates." He argues that a higher conversion rate into Euros would penalise French savers and give us better resistance to hostile takeover bids".

On the other hand, he adds: "I have always said that the dollar has room for appreciation. But to say it is one thing, to obtain it is another." To advocate a more liberal economy, it helps to also accept its con-

Shareholder value in France is likely to shift from a marketing tool to a necessity

Corporate governance and sharaholder value in France are beginning to shift from theoretical recommendations in worthy reports to direct action in the more explosive arenas of board meetings, annual general meetings and the stock markst.

In a traumatic few days in late June this year, two annual general meetings made a particular impact, with angry shareholders at. Eurotunnel and Credit Foncier de France denouncing their boards, and gathering a significant proportion of votes in an effort to defeat directors' resolutions.

In 1995, two previous annual meetings had already caused a stir, when in all but unprecedented moves, groups of shareholders in the Suez and Navigation Mixte conglomerates publicly attacked their respective chairmen, leading to resignations and subsequent business fundamental restructuring in both cases.

But this year's outbursts were different. They did not come from large corporate investors with complex motives not always so related to the values of "corporate governance" as their champions proclaimed. They were the result, instead, of "grass roots" individual shareholders, and with arguably even greater justifica-

tion on their side. Eurotunnel's shareholders fought back hard, after being stung by a long-depressed share price, a belief that bankers on the board and advising the company had conflicts of interest, allegations of insider trading ahead of a 1994 rights' issue, and renewed financial troubles which led the company to announce a standatill on

They posed a series of tough questions on the state of the company, and smassed so many votes that French banking activities, two resolutions - on new non-executive director nominations and the approval of between the insurers Axa the 1995 accounts - were and UAP. Meanwhile, Pariapproved by just 62.5 per the dissidents may be able to amass a blocking minority sufficient to scupper the restructuring plan for the

Even more impressively, at Crédit Foncier de France, just 52.7 per cent of the shareholders approved the 1995 accounts, and feelings ran so high that the board was forced to temporarily suspend the annual general meeting. Ultimately, the board agreed to postpone a controversial vote to reduce the capital of the group, which would wipe out the value of investors' shares.

The two examples were unusually dramatic. But was to extand our opening hours," he says. they were part of a broader He adds that closer co-operation with Matif's trend toward shareholder militancy. He argues that while the UK is still debating whether to join the single correity, and Germany has yet to make a series of important decisions on the transition to the Euro, France is well pre-

. It is set to brunch in January 1999 to the new regime in a co-ordinated way, backed by the critical mass of the simultaneous conversion of equities, government securities and derivatives into Euros. "We must play it aggressively," says Mr Pfauwadel. "It is not enough to have a new game and good cards. You have to play well. Technicalities, timing and

ire, but it generally remains relatively ineffective. One resson is purely logistical with many French companies scheduling their man ings late in the day, or at times which clash with others, making it impossible for investors to attend:

In a notably shambless example. Société Immeuhle de France, a property bustness controlled by Credit Foncier, hired a small room in a hotel for just one and a half hours for what Was sial AGM, after it had proposed a merger with its perent company, a proposal that would have all but wiped out the stakes of investors.

Most important, however, the exercise of votes at ACMs remains of limited use to minority investors because they generally have little chance of gathering enough support to block the large number of institutional proxies safely in the hands of the board, Eurotunnel was an exception, because few institutions still hold significant stakes in the group.

Yet the role of the passive institutional investor may be eign investors and even those based in France find their teeth. ASFFI, the French association of fund managers, endorsed by the Commission des Opérations de Bourse, the markets' watchdog, demanded that its membe exercise the voting rights on

the shares they hold. However, a drive for a bet ter return on equity - still low in many French quoted companies - may prove the most important destabilising influence on entrenched Gal lic boardroom attitudes. Jérome Seydonx, chairman of the Chargeurs entertainment message to heart when he announced early in the year his group's unprecedented split into two separate com-

Pressure from investors was also among the justifications cited for the restructuring of the Suez group, which is selling off its property and and for the merger announced in November bas and the recently-priva-

"shareholder value" is simply a message uttered by French executives to foreign from the noises they make or the decisions they take once safely back in France.

But there are signs that any double language is no longer sustainable. A number of the incestuous "families" of French companies ings, with directors sitting on each others' boards, are breaking up. The merger of Axa and UAP, the unwinding of cross participations by Société Générale, Alcatel Alsthom and Crédit Lyon-

The void left by the sale of such "strategic" stakes is being filled in part by insti-tutional investors with a need to earn high returns. the case of Anglo-Saxon and Dutch pension funds. Now new legislation is paving the way for domestic pension funds which are also likely to invest substantial new sums in equities.

There is still a long way to go, but shareholder value in ingly shift from a marketing tool or a talking point to a necessity for a growing numers who want to vent their ber of boards.

Competitive pressures remain acute

Faced with over-capacity and wider changes in customers' buying habits, truckmakers are seeking further innovation and new niche markets, reports Haig Simonian, Motor Industry Correspondent

oardroom shake-ups, two takeovers and a host of new products ensured that the world of commercial vehicles had picnty on its plate in 1996. market expected to continue falling and Europe facing a mixed outlook next year, restructuring looks set to

In trucks, the cause remains chronic overcapacity. In Europe, the takeovers of Daf and ERF have done nothing to ease the capacity problems which have plagued the industry for years. The fact that both companies fell to stronger north American predators rather than local rivals which might have slimmed them down - suggests competition will intensify, rather than dirainish, as some European truckmakers had

hoped.
Tough competitive pressures are also likely to continue in the US. The 15 per cent fall in the Class 8 market for trucks of more than. 15 tonnes may not be as severe as some had predicted late last year. It has, how-ever, been enough to cause a further shake-out in the industry, with the replacement of a number of top executives as manufacturers have failed to live up to their shareholders' financial expectations.

Neither the European nor the US market looks particu- in Poland. The country is larly rosy next year. Prospects in Europe remain mixed, with differing market expectations. In the UK, demand for commercial vehicles of more than 3.5 tonnes looks set to fall below the long-term equilibrium level of 50,000 units. The immediate outlook appears poor, although some manufacturers are hoping for all uptorn from the second half of next year.

On the continent, demand exports weakens. However; more promising. In the US, the Class 8 market is expec-

upturn predicted until almost the turn of the cen-

The market leaders have not even had the consolation of surging demand in other big markets to compensate for their difficulties at home. Brazil and Argentina are recovering from recent economic downturns which resulted in sharp cuts in production. But it may take another two to three years to regain previous output peaks. And in Japan, sales are expected to remain flat after rising sharply on the back of new weight legislation in the mid-1990s.

Such poor immediate prospects explain why so many truckmakers have rushed into newer territory. Scania expects heavy truck sales in the former Communist countries to soar by 83 per cent to 200,000 units by 2005, compared with 150,000 units in 1996. Demand is set to be boosted by rising economic growth and the need to replace many vehicles bought during the last sales surge of the late 1980s, the

s a first step towards A developing their long term presence in eastern Europe and the former Soviet Union, many leading European manufacturers have set up assembly relatively large in terms of geography and population and lies strategically on the main trading routes between western Europe and Russia. Local assembly has been accelerated by high tariffs on imported vehicles, which make a Polish presence essential for significant market share.

While European manufacturers have focused on former Communist countries such as Poland, Hungary is expected to stagnate as and the Czech Republic (and, domestic economic recovery in the longer term, the forstalls and the outlook for mer Soviet Union), Freightliner and Paccar, two of the medium term prospects book biggest US truckmakers, have targetted China. The need for new niches is likely to be reinforced as competition rises. In Europe, industry doomsters have been forecasting an imminent export boom by far eastern manufacturers for years. The incursion has been barely evident so far.

However, the arrival of UK-built Isuzu light trucks after this year's production deal with Leyland Trucks may represent the start of a new trend. Daewoo, the omnipresent South Korean industrial group, appears to have European sales firmly in its sights for the new heavy trucks rolling out of its vast new Kunsan factory. And Samsung, which is gearing up to produce passenger cars at another new plant, is rumoured to be eyeing up the European truck

New models testify to the increasing globalisation of the industry

If the commercial vehicle industry had vintages, 1996 would go down as an outstanding year. In the space of a few months, many of the world's leading van and vehicles which are likely to eature on the world's roads allowing for diminishing product renewal cycles.

new metal stems partly from ness in replacing crucial models. Mercedes-Benz's venerable SK heavy truck range had been soldiering on, for 28 years until finally sent packing by the new Actros

been accelerated by the Hanover commercial vehicles show. The September event. which is the world's leading showcase for new trucks and facturers to bring out new products in time, .

This year's show provided more than a display of new metal, however. Many - especially heavy trucks - testified to the increasing globalisation of the commercial vehicles

Outwardly, the trucks exhibited gave little away about the deeper themes, such as joint platforms or shared components, shaping the industry. Beneath the vehicles illustrated the fact that truckmakers are trying to exploit the same economiss of scale already driving the car business towards world" products.

Commercial vehicles will never become as homogeneous as cars. Regional requirements differ more sharply and lower output lavels diminish the impact of economies of scale. But the trend towards shared platforms, or, at the very least, greater use of common components, is becoming evident. The Actros, for example, shares various features Freightliner, Mercedes- launched in July "reflects Benz's US subsidiary, last

Electronic engine manage ment is one of the most obvious areas where truckmakers are trying to innovate on a global scale. The Actros and the Century Class boast sophisticated fuel injection and engine management systems to improve economy and reduce emissions. The technology has been jointly veloped with Detroit Diesel, the US engine maker in which Mercedes-Benz has a

weight and raise payloads, and an ever-increasing are among the other com-mon threads appearing in the new vehicles from both sides of the Atlantic.

Mercedes-Benz, Renault and Volvo, the European manufacturers with big US subsidiaries, have been among the pace-setters in trying to pool the knowledge of their US and European operations. Although it will be a long time - if ever before European and North America trucks look the same, the latest products Mustrate the attempts by the times truckmakers to cut product development times and costs and to raise productivity. Volvo's VN, launched in the US in September, claims to be the most wind-cheating tractor in north America. Based on

weight segment of the European market. MAN completed its three-year product renewal cycle with the M2000 range in the spring. And Volvo confirmed expectations in Hannover by unveiling the FLC, its first

purpose-built 7.5 towner. The newcomers have been well-received. The Actros has won plaudits for its technical innovation, especially its electronic braking system linked to standard disc brakes all-round. Other newfeatures include an electronic engine management system allowing much longer service intervals thanks to an auto-diagnostic system.

Electronic engine management is now a key area of innovation

monitoring engine performance. Renault also claims to have had a strong receping to exploit links between tion for the Premium. The The 11-litre engine available new vehicle, available in two heavy truck unveiled by medium truck range long-distance baulage, has already notched up almost some Mack technology", 6,000 orders, it says.

> has registered 2,000 orders for the VN and hopes to deliver the first 700-800 units

The feast of new vehicles does not imply a famine for 1997. The year will barely have started before Daf launches its new 95 heavy range at the Brussels show

Europe, will be trying to build up output of the Isuzu N series light truck, which went into production in August under contract. The company expects to build 1,000-1,500 units of the 3.5-6.2 tonne range in the first full

However, the biggest changes will be coming from Renault and Mercedes-Benz the two European laggards in renewing their ranges. Renault is expected to unveil its facelifted Magnum, reflecting the more rounded styling of the Premium. Later in 1997 should come the replacement for the Maxfollowed in 1996, with the iong-awaited successor for the venerable Midliner 7.5-15

tonne range. Late 1997 or early 1998 should bring a crop of new An updated mid-weight 12-17 tonne truck range will rationalise and replace the current LN2 and MK ranges shich are sized; as venera-ble as the heavy SK. Analysts also expect further derivates of the Actros. including a multi-wheel 32

Mercedes-Benz is also expected to keep the presheavy van, which has just gone on sale in continental Europe, will reach the UK in the new year. The new 4.6-7.5 tonne range completes a three model product replacement and expansion drive that began with the Sprinter medium van in 1995 and continued with the lighter weight Vito this year. And Volkwagen will be continuing its push into lighter commercial vehicles which began last year with the creation of a new "fifth brand"

60 years of

60 years of success and stronger than ever

Scania is not like other companies in the heavy truck and bus industry. We have been well in the black since 1935. How many other large industrial companies have been profitable for 60 years in a row?

Our formula for success is no secret. We have simply remained true to our ideals long-term.

why our customers are willing to pay more for a Scania.

Scania was a pioneer in developing a modular component system, allowing the customer to adapt the vehicle to his own needs. This freedom of choice makes it profitable to own and drive a Scania.

Every year, our technicians refine

MON OF ALL THE TRUCKS AND BUSES WE MANUFACTURE ARE BOUGHT IN EUROPE.

Scania was founded in 1891. Our concept was to build vehicles for the most demanding of customers. We started off making railway carriages, and then moved on to heavy trucks, buses, coaches, and industrial and marine engines. We decided that our products would last better and longer than our competitors'. And that we would concentrate on what we are best at - heavy vehicles and engines. Nothing else.

We have never lost sight of this ideal. Every Scania vehicle you see on the road is the outcome of what the most demanding customers have asked of us. This has been - indeed it still is - a good philosophy. Now that Scania is once again an independent company, we are stronger than ever.

Our products are built for an extremely long life, giving the customer a low cost of operation. That is

2,000 of the 8,000 parts needed to build a Scania. Half of our efforts are aimed at reducing the effect our vehicles have on the environment. Our customers are not satisfied with anything less.

Scania has operations in some 100 countries. We are among the world leaders in the heavy truck and bus and coach sector. Our engines have a strong international standing, and are used in such areas as combine-harvesters, water pumps and sea-rescue vessels.

We have not chosen the easy route. Demanding customers are never completely satisfied. This is the incentive for Scania employees. We are doing what we have always done: that little bit extra for the most demanding customers. We know that it is worth our while - sixty years of success is a long time.

objections. The company may revive its plans for new, modern truck production lines once labour/management talks resume, but says it could still take a \$35m charge to fourth-quarter earnings to cover costs associated with the abandoned effort.

Overall, analysts say this downturn in US heavy truck demand may be relatively short-lived, and the trough of the cycle could be shal-

lower than in the past. "A few years ago, 130,000 units would have been a hanner year for the heavy truck industry," notes one Wall Street analyst, "You have to look at these things

■ Argentina • By David Pilling in Buenos Aires

'Millennium', the CH 600; the company made its name in the

Mercosur

Truck production is recovering substantially as Argentina pulls out of recession

sion of 1995 may have La bitten deeply into sales of all vehicles, including trucks, but it appears not to have sapped the enthusiasm that truck-makers have for South America's second-largest market after

Sales of trucks and buses in Argentina were down slightly in 1996 to 11,037, according to Adefa, the Argentine association of vehicle manufacturers, about a fifth of the sales registered in Brazil.

Argentine truck production, concentrated among the three principal local manufacturers - Iveco, Mercedes-Benz and Scania - fell 19.1 per cent last year to plans to export a sizeable 5,134. This followed two years of rapid expension in duction to Brazil. which production had risen by 15.7 per cent in 1993 and by nearly 20 per cent in 1994. But this year will see truck production bounce tina pulls out of recession. according to DRI/McGraw-

Hill, the motor industry analyst. Over the next years, commercial vehicle sales will rise "substantially", according to a recent report by the group. "As the country continues developing and the road network is extended, demand for trucks will continue growing," says Mr Richard

McGraw-Hill, "It's not like Europe where sales are generally in order to replace the existing fleet. This is new "Sales of the ultra heavies, above 15-16 tons, should

grow faster than the 6-15-ton trucks," says Mr Walles, "as bauliers try to improve the efficiency of their business." Demand is being spurred principally by Mercosur, the customs union which links Argentina with Uruguay, Paraguay and - by far most importantly - the 150m-

strong Brazilian market. Development of the customs union, which has brought free regional trade in most goods, has seen a four-fold surge in Argentine exports to Brazil since 1995 to \$5.5bn last year. Most of those goods, much of them agricultural-based products such as wheat, meat and cheese, go by road.

Truck producers, like those of cars and utility vehicles, are encouraged to high tariffs, and rewards 20,000 vehicles a year. local producers with plants in both Brazil and Argen-

nder the agreement, Brazilian and Argentine manufacturers are entitled to import Renault Trafic in Córdoba vehicles from each country duty-free, as long as they satisfy local content and ments. In practice, manufacturers have begun to specialise, building one type of vehicle in Argentina and Peugeot licensee, 10 per cent. another in Brazil. Shipments between the factories are horizon for utilities could be then carefully balanced to a 10 per cent tax on diesel avoid duties.

In the truck industry, the trend is increasingly towards manufacturing light vans, trucks and utility vehicles in zil as a base for heavy-vehicle production.

Mercedes-Benz is to produce a new small six-ton GVW truck in Argentina for regional sale and will also be producing 15,000 Sprinter vans at a new plant from next year. "Mercedes will produce light utility vehicles here [in Argentina] and heavy-weight trucks in Bra-sil," says Mr Martin Praction. an analyst at Deutsche Mon gan Grenfell.

As a result of that strate egy, production of heavy trucks in Argentina is likely to fail over the coming says DRI/McGraw-Hill.

Iveco is pursuing a similar strategy to Mercedes, with plans to invest a total of \$200m on plants in Brazil and Argentina. The former will specialise in medium-toheavy vehicles, while the Argentine plant will produce light-to-medium vehicles based on the Daily light truck range and the UK-built EuroCargo model Iveco amount of its Argentine pro-

> reduced interest rates over the past year and the trend should continue, albeit slowly. With the economy showing signs of recovery, production of trucks i expected to rise from 54,000 units this year to 60,000 in 1997. But there is little prospect of a return to the mar-ket's heyday of the late 1970s, when production rose to more than 100,000 vehicles

> In those days the Brazilian market was sealed off from the outside world by prohibitive customs duties and an industrial policy of "import substitution". Those policies have been reversed since the beginning of the 1990s, and manufacturers are now immersed in the world trend towards globalisation.

Scania recently reorganised its operations in Brazil, Argentina, Mexico, Chile and Peru into Scania Latin America. Product engineering, development and purchasing are all based in Sao Paulo. Gradually, manufacwith the company's global policy of "standardisation", using modular vehicle designs and parts that are identical across the company results of simplification and

1997, says Mr Hedlund, "our factories in Latin America will operate at first world levels of productivity and

vehicles". means manufacturers must make extra efforts to gain an edge over the opposition. Scania says its after sales service - concentrating on maintenance, rescue services and ready availability of parts - has become a decisive factor in winning sales.

ercedes-Benz hopes ercedes-Benz hopes reliability and long life will give a similar edge to its Brazil Series. These vehicles, too, show the standardisation, with fewer and simpler parts designed The policy will take time to increase efficiency and

cent rise in 1998. The greatest resilience of

all has been show by light commercial vehicles, up to 6 tonnes, which are by far the industry's largest sector. Partly, this resilience is attributed to the strength of the current replacement cycle for light commercials bought in the boom years of the late 1980s; but partly, too, it is believed to reflect an exceptionally competitive market being supported heavily by manufacturers' Demand has been weakensales incentive programmes. ing even in the UK, one of The combined effect is an expected 4 per cent growth

in the sector this year fol-

lowed by 5.1 per cent in 1997

and reaching a peak of 1.4m. One of the big problems facing truck makers in the region is that production momentum over the 18 months to the middle of this year was being sustained even more vigorously than per cent down on 1995, with sales. With output rates runa further fall in the same ning around 20 per cent higher than 1995 levels in range likely for 1997.

starting to pick up strongly from next autumn.

Uncertainties also abound other heavy truck markets, not least Spain's. While noone believes it is about to re-experience the disastrous plunge of the turn of the decade - when sales fell from 20,000 units to less than 5,000 within four years sales are expected to finish the year about 12 per cent down, with no immediately obvious reasons for recovery nexi vear. With exports also muted.

the scenario in which too many trucks have been chasing too few buyers has produced two further rounds of rationalisation within the The more significant, and

most recent, came early in October, when Daf Trucks, the Dutch-Belgian heavy truck makers - to maintain sions and axles - from spe-

try heavily over-stocked and reducing output sharply. On DRI estimates, the

overall output cutback is 15 per cent for the second balf of this year - and the problems being caused to individual manufacturers are becoming ever more obvious. MAN of Germany, for example, warned shareholders only last month that sagging demand in the region will result in a sharp profits fall

the few main European countries in an economic recovery phase. Despite a sales upsurge in the past two months - attributed wholly to the registration of trucks not complying with stiffer "Euro 2" exhaust emissions legislation introduced on October 1 - most truck makers now think the UK truck market this year will be 5-10

However, companies suchas the UK market leader iveco-Ford expect that the drop will be confined to the first half, with demand

now: it produced almost about the future direction of 17,000 trucks last year, and sold 25,000 thanks to an arrangement under which its buys in rebadged lighter Trucks of the UK. However, despite its earlier rescue, its roughly nine per cent share of the region's heavy truck market had left it continuing to appear vulnerable in the face of chronic over-capacity in the European industry and the much heftier product development and mar-

> The Daf takeover followed by just a few months a decision by chairman Mr Peter Foden to give up the long, hard struggle by ERF - the smallest of the UK's beavy nents - engines, transmis-

rivals like Mercedes-Benz

and Iveco.

933m (\$570m).

truckmaker revived from its independence. The Cheshbankruptcy three years ago, was taken over by US truck ire-based company, which produces around 4,000 trucks per year, was bought by maker Paccar, headquartered in Seattle, for Western Star, the Canadian truck company which is about twice ERF's size.

Mr Cor Baan, Daf's chair-man, rationalised the deal as Both DAF and ERF fell providing access to a much victim to the inexorably rismore international sales neting new product developwork, as well as providing ment costs required by ever finance and technology benemore demanding safety and emissions legislation, and Daf is by no means a minthe ever higher marketing bills associated with relentless competition.

> The deeper involvement of Paccar in the European industry (it already owns the small, specialist UK truck maker Foden) may have wider implications than an ownership change.

accar is unlikely to replicate the mistakes of European producers who, having bought up North American truck makers in the 1980s, tried to stuff European-style product down reluctant US truck keting muscle of larger operators' throats. But Paccar is very much

in the tradition of the North American industry in buying in the most expensive and difficult-to-develop compo-

cialist producers such as Cummins Engine. Eaton and Rockwell, rather than developing its own. The attractions of simultaneously taking a large chunk out of Daf's costs by abandoning

'in-house' drivetrain development and manufacture, and increasing its own muscle power with the independents because of the greater purchasing economies of scale. can be expected to prove irresistible to Paccar. It may also turn out to be

the key which, for Cummins

et al finally starts to unlock the European market. North America's big drivetrain suppliers have long sought entry to European truck manufacturing by arguing that, just as in the US, it is ludicrous - given the volumes involved - for most European truck makers to Hawtal Whiting. produce their own engines and transmissions when they could buy better, cheaper engines from specialists able to invest much more in research and development because of their subsequent high volume of sales. With the occasional exceptions such as ERF, or a

arguments have mostly fallen on deaf ears.

Twenty thousand Dafs coming into the marketplace with a clear cost advantage could be much more diffficult to ignore. Nor is compe-tition within Europe going to be confined to existing players. Daewoo Motor, the South Korean industrial giant's aggressively expansionist vehicles arm. is poised to start its exports of heavy trucks to the region from its new and massive plant at Kunsan.

Output, which began last September, is already up to 20,000 units a year from next month. The trucks range in size from 8 to 23 tonnes gross, with Daewoo engines, and have been designed for international markets by the UK engineering consultancy.

The export drive from Kunsan forms only part of the threat - Daewoo has also bought control of Avia, the largest truckmaker in the Czech Republic, where it plans to invest heavily in new trucks and engines. Eastern and central European markets are first on the agenda. But those of western clearly-defined product niche in the case of a larger Euro-Europe will not be far

Advances in technology • By John Griffiths

Moving towards 'intelligent' vehicles and highways

Telematics to create 'intelligent' highways, may eventually make movements of all traffic generally more efficient

Next summer, on Austria's scenically spectacular Brenner autobahn, a remarkable series of trials is planned to

Car drivers could find themselves passing pairs of heavy trucks in which the driver of the second truck, just a precarious metre or so behind the first, would appear to be giving whole new and dangerous emphasis to the word 'tailgating'.

Except that, on closer examination, the 'driver' of the following truck will be seen not even to have his hands on any of the controls. He will be in the cab purely as a 'minder'. The real driver of both vehicles will be in the front truck, controlling the movements of the two vehicles electronically.

The "electronic drawbar" experiment has a considerably more serious function than to encourage incredulous car drivers to think that it's time to lay off the schnapps.

If the concept proves workable - and that means steering successfully not just around technical obstacles but pitfalls of legal liability - within a decade motorists could be passing not pairs of trucks but a 'convoy' of a dozen or more vehicles, just as closely linked and with still only one driver, in the

lead vehicle. There are two instantly obvious advantages to a significant proportion of road haulage being switched to such a system.

First, a potentially large saving in manpower costs for hauliers; second, significant fuel savings. Trucks, especially tractor units with their big frontal areas, consumo a substantial part of fuel energy simply to displace the air through which form a 'readtrain', fuel consumption reduction will be proportional to the number of trucks which can 'hide' behind the lead truck's frontal area.

The concept is radical, but has already been shown to work in its fundamentals on manufacturers' private test tracks. One big drawback, of course, is that it could not be used on 'ordinary' roads but it could be used on motorways, which account for by far the greatest proportion of truck haulage miles and where the inside lane could be dedicated to their exclusive use.

provides just one illustration, albeit a spectacular tion of trucks as the world . moves towards both "intelligent" vehicles and "intelligent" highways early next

Another claimed advantage of the concept is that, by bunching trucks together, there will be less congestion than is the case with large numbers of individual trucks, making overtaking by cars safer and more orderly. Each convoy would be assembled and dispersed The convoy experiment at mutually convenient motorway services centres.

Pilot schemes

Other new technologies, notably the telematics to create 'intelligent' highways, should facilitate the use of such convoys and make movements of all traffic generally more efficient. Gradually, in pilot schemes across Europe, roadside traffic monitoring beacons are being decade, will grow into Europe-wide networks capa-Actros tractor units and two bie of exchanging data with compressed natural gas

speed. By bunching up many lveco Eurostars are being on-board terminals in cars (CNG) or liquefied petroleum They will warn of conses-

grated with satellite road navigation systems already starting to go on sale, will provide the means by which all traffic can be paced most efficiently by means of speed controls, synchronised traffic lights and automatic rerouting around congestion Taken together, the mea-

sures are expected radically to reduce the delays, wasted man-hours and unproductive fuel consumption calculated to cost EU countries alone substantially in excess of \$17bn each year.

Electronic control systems are already bringing about a revolution on board the truck itself, managing ever more sophisticated engine, transmission, traction and suspension systems. The revolution, however, as yet is stopping well short of any fundamental change in engine type - at least in the medium term.

Trials are proceeding they have already done for decades - with alternative introduced which, within a engines to the ubiquitous truck diesel. But as yet only engines adapted to run on

gas(LPG) have begun even to nibble at the dominance of the diesel. All other forms have disadvantages which to date have provided insupera-Petrol engines, at least for

medium and heavy trucks,

are hopelessly uncompetitive because of their far greater thirst for fuel than diesel. CNG and LPG are environmentally 'cleaner' than the diesel - in particular, they emit none of the diesel's tiny particulates suspected of being carcinogenic - but the on-board tanks needed to store the fuel are bulky and in only a very few countries has a gas refuelling infrastructure been developed to come anywhere near matching that of diesel and petrol. That has not stopped Mercedes-Benz - which also owns Freightliner of the US and is the world's largest truck maker - and some other producers, researching

around 20 such research programmes in operation. None is set to challenge diesel in the short to medium term, and it seems unlikely that the most promising "clean" powertrain technology of all - the hydrogen fuel cell - will become the motive power for

However, Mercedes in the past two years has been making great progress with the technology; the fuel cell to drive one of Mercedes' large panel once weighed 800 kilogrammes and required virtually all the interior space. Already it has been reduced in size to fit within a relatively small compartment, even including its

hydrogen and oxygen tanks. "Given that degree of progit should not be ruled out. that such fuel cells may one day power trucks," according to a Mercedes-Benz

there are other hig problems, equivalent of less than one cost of a heavy truck.

Pressing shead in India: Iveco will open its new Bangalore plant this month like the distribution infrastructure for the hydrogen and oxygen 'fuel' to be resolved. But if all these problem could be overcome, then it would undoubtedly leapfrog all the other technologies." The pressures to develop environmentally "cleaner" trucks, particularly to improve air quality in urban areas, continue to increase. Wider availability of CNG and LPG in North America the potential of a number of "alternative" fuels and has already led engine makers such as Cummins and engines for trucks. At last Caterpillar to put on sale count, Mercedes-Benz had heavy truck engines capable of running on these fuels.

slow, however, because of the additional costs involved. In the UK for example, gas provider BOC acknowledges that currently an operator wishing to buy and use heavy trucks covering long environmental reasons for each \$80,000 heavy truck purchased.

Some \$8,000 of this repreof the engine itself. The bigis the \$20,000 plus fall in the vehicle compared with a die- cally to underwriting gas- refining industry were to sel version. Not surprisingly, the gas

the financial penalties to operators would virtually disappear as a result of engine manufacturing economies of scale being built up, a sizeable market developing in used CNG vehicles and an adequate refuelling infrastructure being put in place. The arguments are CNG-powered trucks for starting to fall on more receptive government ears; would face a \$30,000 penalty but not quite in the way the consortium would like. In its most recent budget, the UK government cut the duty on sents the extra purchase cost gas fuels by 25 per cent. But it is regarded as not enough, gest disincentive, however, and so far there is no sign of part of the tax take from the resale value of such a fuels being devoted specifi-

Emissions

truck fleet growth.

Efforts to make the diesel itself cleaner continue apace. in part driven by legislation. In October the EU's "Euro 2" emissions standards, further restricting permissible levels of particulates, oxides of nitrogen, bydrocarbons and carbon monoxide, came into

the story; already Brussels bureaucrats are debating how much further emissions should be reduced under "Euro 3" rules, and precisely when they should be intro-

The industry expects these to be around the turn of the century but, unless there is a radical re-think by Brussels in the interim, does not expect meeting the Euro 3 standards to be as difficult as meeting Euro 2. This is because of the intensive technological effort that was required to meet Euro 2, and which has led to most of the parameters of engine and transmission control already being placed under electronic control.

Meeting Euro 3 will be largely a matter of making management systems and injector systems more sophisticated, with even higher injection pressures, truck makers hope.

Nor, they insist, should be onus of developing 'clean' trucks fall entirely on the manufacturers. mountain of problems

The construction industry's slowdown has hit the heavy truck sector hard

The South Korean truck industry has shifted into low gear as it confronts a mountain of problems. Domestic sales are stagnant and a sharp growth in exports is unlikely in the near future because of the industry's lack of overseas marketing experience.

Commercial vehicles accounted for a fifth of the 2.5m vehicles produced in Korea last year. Most were medium-sized vans and buses manufactured by Hyundai Motor and Kia Motors, which had 46 per cent and 38 per cent respec tively of the domestic commercial vehicle market in

The heavy truck segment is much smaller, with an estimated 35,000 vehicles produced last year. Asia Motors, a subsidiary of Kia, and Ssangyong Motors have traditionally dominated this sector. In the last few years, Daewoo and Samsung have entered the large truck industry attracted by the normally high profit mar-gins for these vehicles.

But after buoyant sales for commercial vehicles in the early 1990s, domestic demand has been sluggish since 1994. Domestic sales increased by only 2.6 per cent to 325,000 vehicles during the first nine months of

The sluggish sales reflect the problems affecting the 24,355 vehicles during the rest of the Korean motor first nine months of this industry, including market year - "heavy-duty trucks

the biggest consumers of commercial vehicles, have suffered the most from a Don Lee, motor analyst for recent economic slowdown.

Problems are even more industry, which had a 3.9 per cent fall in domestic sales to saturation and highly con- are highly geared to the con-

during the building boom of the early 1990s," says Mr

BZW Securities in Seoul. Almost 30 per cent of the acute for the heavy truck heavy trucks produced in Korea are related to the construction industry, including dump trucks and special purpose vehicles. Mr Lee believes that sales would have fallen even further if

vehicles to construction their industrial groups.

One indication of the effect of construction slowdown on large truck sales is that Asia and Ssangyong equivalent to two months' production. Both companies are expected to report losses this year. The poor market gested roads. In addition, struction industry, which is the truck producers had not conditions have forced Halla

Heavy Industries to postsmall trucks and vans by pone plans to begin truck production using imported technology from Iveco of

Italy. In apparent response to the slowdown, Samsung Heavy Industries this summer spun off its truck venture into a separate company, Samsung Commercial Vehicle, to reduce its capital costs and share the financial burden among other Samsung subsidiaries.

Samsung began truck production in 1994 in association with Nissan of Japan as a stepping stone to the group's goal of making passenger cars by 1998. Last plant to produce 200,000 complex at Kunsan.

1999 in addition to Samsung's current range of 3,800 heavy trucks.

But some analysts speculate that Samsung might reduce its planned truck production espacity if the market remains sluggish. In addition, Samsung is spending at least \$5bn on passenger car production, which could deprive funds from the truck operation.

However, Daewoo Heavy Industries appears committed to expanding its new truck venture. It invested \$100m to develop 13 new heavy truck models last year and recently expanded proyear, construction was duction capacity to 20,000 started on a Won 1,200bn large trucks at its factory

Upon completion of additional facilities for the production of small and medium trucks by 2000, the commercial vehicle complex will have a total annual production capacity of 190,000 vehicles. Although Daewoo exported only 100 trucks last

creating a large overseas market, particularly in Europe following its recent acquisition of the Czech truck producer Avia.

Exports account for only a small share of sales for other Korean truck producers. But they are gradually establishing overseas production bases. Hyundai last year established a joint venture

in the Netherlands to assem-

ble 5,000 3.5-tonne trucks

year, it has ambitions of

annually and is planning to assemble 10,000 one-tonne trucks in the Czech Republic and Bulgario.

Asia Motors is building a \$200m plant in Brazil, its single largest export market, to produce 60,000 one-toune trucks by 1999. The move was in response to recent tariff increases on imported vehicles by the Brazilian government.

Meanwhile, Ssangyong is planning to increase overseas van sales to 15,000 vehicles next year through the global distribution network of Mercedes-Benz, which holds 5 per cent of Ssangyong. Ssangyong is producing the vans on an original equipment manufacturing basis for Mercedes.

Your opportunity to develop your business in Russia

The 'Arzamas machinebuilding plant' enterprise (AMZ) is situated 100 kilometres south of Nizhny Novgorod in the city of Arzamas with a population in the region of 100,000. It was formed 20 years ago as a Gorky automobile plant corporation. The number of workers has reached 7000 and stabilised at this level. The management team is represented by eager qualified engineers, 40-50 years old, many of whom have worked here from the opening of the plant. The General director of the factory, Vladimir Tiourine (49 years old) has successfully managed the enterprise for 10 years. He has an incredible ability to cope with the difficulties of the Russian market, a talent to foresee possible problems and an un-

strategic thinking. The legal status of the enterprise is a joint stock company. The main shareholder is Gorky automobile plant with a 45% share. The rest of the roubles. In November 1996

doubted inclination to

We are presenting a leading Russian enterprise -

which is the main producer of armoured personnel carriers in Russia. the nominal value of realisation yields 40% of for making isothermic

between the workers, 5% are held by the managers (11 persons). According to the 1995 results, 6000% was paid per preference share at the nominal value of 500 roubles, and 700% per common share at the nominal value of 500

800000 rbls. per share was registered after revaluation. The gross margin of the company in both roubles and currency for 1995 is estimated at 20m dollars. The gross margin for the first 9 months of 1996 is estimated at 14m dollars. The value of contracts signed for 1997 is 130m

The enterprise produces two types of products: military and civil, general nomenclature consists of over 1000 titles. The sales volume of military products, which is mainly represented by BTR-80 armoured personnel carriers produced both for export and for internal demand. forms 60% of the total

the total volume of sales, and numericlature includes a wide range of goods, for example, completing products for cass produced by Gorky and other automobile plants. A whole range of civil cars is being produced on the BTR-80 chassis cars for transportation of money, cars with hydraulic self-eizure for the export of logs from logging cars having reactive projectiles installed for extinguishing oil-well fires, and also alloperators, geologists, power engineers etc. 'Gazelle' small trucks' chassis, delivered by

models of vans. Furniture production was organised three years ago and now functions successfully using untilled logs as raw materials. Here at the factory they go through a full cycle of drying, sawing and processing, finally being turned into kitchen fixtures and soft furniture. Created for factory requirements, production of reinforced concrete wares (such as blocks, overlappings etc) have been developed and purpose amphibian cars are now available on the for transporting drill- local market. The list of products, manufactured by this plant would be incomplete without mentioning our sheet Sorky automobile plant in metal, products of working footwear, tools for wood processing, parts, is presently used

stoves for datchas, auto

Presently, the factory's engineers are working on the realisation of a new project with regard to the manufacturing of vans on the 'Gazelle' small truck chassis (with 1.5 tons of cargo-carrying capacity) which are planned to be delivered from the Gorky automobile plant. A car-assembly plant with all the necessary services (electricity, water, railroad

tracks etc) has been built on the plant's territory especially for this project. It occupies an area of 10,000 square metres. It is planned to organise the assembly of small series (3000-5000 pieces per annum) of ambulance cars, police cars, refrigerator cars, milk-cars and some other models (more than 10 models). It is important to note that in 1997, the 'Gazelle' will be completed with a STAYER

MI diesel by STAYER (Austria), licence for production of which was bought by Gorky automobile parts in 1995. Preliminary discussions of this project took place in Moscow recently. The approximate volume of finance required for the project realisation will not exceed 10m dollars at the pay-back period of 3-4 years. Funds will be used for buying equipment in the West (such as presses, stamps, etc), specification of which is now available. External investments only will allow the plant to initiate earlier production. The factory's management is looking for cooperation from financial institutions to provide the finance to develop this project.
